THIS WEEK

AS you'll see, from page 50, we've created a special report about the Chinese brands that have appeared in the past 18 months or so.

Around one-in-10 new cars in the UK are now made by a Chinese brand, which is quite a rise. Even more significantly, we've never seen so many unfamiliar names arriving here at once.

It's fascinating and, if you're an established manufacturer, terrifying. I'll be amazed if all the new brands survive, but the bigger players coming to the UK are hell bent on making an impression – and have the cash to do it.

What's more, the success is not based on incremental new-car sales. It has come – and will continue to come – at the expense of household names. The big brands we've known all our lives have been caught out by how quickly UK buyers have been willing to embrace the idea of driving a car from a firm they hadn't heard of a couple of years ago – and maybe hasn't even been producing vehicles for long.

> **"BIG BRANDS HAVE BEEN CAUGHT OUT BY HOW QUICKLY UK BUYERS HAVE EMBRACED THE IDEA OF DRIVING A CAR FROM A FIRM THEY HADN'T HEARD OF TWO YEARS AGO"**

In some ways Tesla is the template, but the Chinese major less on personality, more on affordability, and use lots of marketing money, and tech, to gain sales.

How legacy brands respond is key. Renault, for example, set up the Advanced China Development Centre in Shanghai to learn from the Chinese how to bring cars to market more quickly. Changing western culture to make decisions on a weekly, not monthly basis helps turbocharge projects: the ACDC developed the new Twingo in less than two years and with a 20,000-Euros (£17,400) price.

Stellantis is on it too, developing the low-cost 'Smart Car' platform under the Citroen C3 and Vauxhall Frontera to make EVs more affordable, and forging a joint venture with Leapmotor to import Chinese cars to Europe. Meanwhile, VW Group is partnering with XPeng on new software for China. Taking action is the attitude proposed by Skoda CEO Klaus Zellmer: "We just need to be better."

This perfect storm of the transition to electric and the rising cost of living has made consumers more willing than ever to try something new. Despite vocal geopolitical concerns, Chinese cars are being met with less suspicion than new Japanese brands were in the sixties and seventies. The survival of the fittest car makers will be a compelling story to be played out over the coming years.

DRIVEN NE
RIVAL TO B

REVEALED We get behind the wheel of Volvo's pure-electric replacement for the S90 exec

Ellis Hyde

Ellis.Hyde@autoexpress.co.uk

THAT'S right, Volvo doesn't just make SUVs and estates! The new Volvo ES90 is strutting into town to take on highly impressive, all-electric executive saloons such as the Audi A6 e-tron and BMW i5, along with the Polestar 4.

However, the ES90 is obviously not a traditional three-box saloon. Volvo says it's been designed to offer the "refined elegance of a sedan, the adaptability of a fastback" (whatever that means) and "the spacious interior and higher ground clearance associated with an SUV".

It shares a lot with Volvo's seven-seat EX90 SUV, starting with the sleek front end that incorporates the same headlights and pixelated 'Thor's Hammer' daytime running lights. That lump on the roof is not a taxi beacon, it's a LiDAR stack – one of the numerous sensors and cameras dotted around the car that feed the safety and driver-assistance tech.

The cabin is almost identical to the EX90's as well, inheriting the same slim nine-inch driver's display, head-up display and 14.5-inch portrait touchscreen. The Google-based infotainment system is responsible for controlling everything on this car, including opening the glovebox, while the only physical control is a scroll wheel for the audio volume sited below the touchscreen.

The dashboard is largely the same too, featuring a combination of real wood and Volvo's sustainable Nordico leather alternative – partly made from pine oil sourced from Swedish and Finnish forests. The main difference is the design of the centre console, which is lower and more open than the EX90's tall centre tunnel.

Our test car featured the light-grey 'Dawn' interior colour scheme, with ash wood on the dashboard and a two-tone hand-stitched steering wheel. This would be our choice simply because it makes the cabin feel more airy than the black 'Charcoal' or beige 'Cardamom' designs.

This interior looks very classy and the materials feel nice to the touch. Although if you start to prodding around you'll notice that the leather-like trim, for example on the doors, is just a very thin layer covering up the hard plastic beneath. There's also a fair amount of plastic dotted around, but at least it has a soft matte finish.

Both the screens are bright and clear, and we like that the driver's display doesn't overwhelm you with information. Various Google apps, such as Google Maps, come built-in, and these are excellent as always. The 25-speaker Bowers and Wilkins stereo you get in higher-spec models is simply magnificent. It's powerful, exceptionally clear and creates an immersive surround-sound stage. The new Abbey Road Studios mode is also a fun novelty that will definitely entertain the audiophiles.

Unfortunately, the touchscreen in our test car was occasionally laggy. We couldn't connect to Apple CarPlay at all, and Volvo's latest infotainment system still isn't as easy to use as we would like. For one thing, the small

Volvo ES90 Ultra Single Motor Extended Range

Price: £79,160 **On sale:** Now

Powertrain: 92kWh battery, 1x e-motor

Power/torque: 328bhp/480Nm

Transmission: Single-speed automatic, rear-wheel drive

0-62mph/top speed: 6.6 seconds/112mph

Range: 400 miles

Max. charging: 310kW (10-80% in 22 mins)

Size (L/W/H): 5,000/1,942/1,546mm

HANDLING Twisty roads are not the ES90's forte, because it feels heavy and vague. It's comfortable and quiet on the motorway though

> **"BOTH THE SCREENS ARE BRIGHT, AND WE LIKE THAT THE DRIVER'S DISPLAY DOESN'T OVERWHELM YOU WITH INFORMATION. THE BUILT-IN GOOGLE APPS ARE EXCELLENT"**

icons are difficult to tap while driving, and there is a multitude of menus you have to sift through to change any setting. Google's voice assistant can help with certain things, but even so, for a company obsessed with safety, forcing the driver to take their eyes off the road so much to use the touchscreen seems rather baffling.

The so-called 'contextual bar' runs along the lower part of the touchscreen, and this is supposed to learn the functions you use most frequently and offer shortcuts. We can only assume it takes a while to learn the driver's habits, because the one in our car kept offering us a way to quickly change the drive mode, despite the options being limited to 'standard' and 'off-road', which our route around Monaco didn't call for.

Another major annoyance is with the pitiful rear visibility. You get a sliver of a rear windscreen in the ES90, which you can barely see out of if the middle seat headrest is in place, and definitely not if there's a person sitting there. We're not the biggest proponents of digital rear-view mirrors, such as you get in a Polestar 4, but this is one time that it would have been helpful to fit one.

The ES90 is a full five metres long and has a wheelbase of 3.1 metres, meaning it's larger than the Volvo S90 it replaces. As you'd hope, there is a lot of space in this car, especially for rear-seat passengers, who will appreciate how much they can stretch out. Even six-feet-tall adults have headroom to spare, and the glass roof floods the cabin with light.

As is often the case in electric cars, the floor in the rear is very high due to the battery pack underneath, so if passengers have long legs, they don't get much under-thigh support. A solution we've seen in other executive EVs is carving out part of the battery to create what Porsche calls 'foot garages', but the ES90 doesn't employ any such solution.

STYLING

Sleek hatchback look is certainly a departure for Volvo, which is usually associated with SUVs and estates

Rather than the letterbox-style boot opening of a traditional saloon, the ES90 has a proper hatchback, so it's easy to throw stuff into the 424-litre luggage area. It's a good size and shape, and there's just enough space under the floor for the charging cables. Admittedly, all of its rivals offer more capacity – particularly the Polestar 4, which you can cram 526 litres worth of stuff into.

There is a 22-litre 'frunk' under the Volvo's bonnet, which is something the BMW i5 doesn't have. But because of the unusual curved shape of the tray inside, you can barely fit anything in – a backpack at most.

Much like Audi's A6 e-tron, rather than offering a long range or fast charging, the ES90 delivers on both fronts. Twin Motor versions are powered by a huge 106kWh battery that offers up to 435 miles of range, while a maximum charging speed of up to 350kW (base cars top out at 310kW) allows for a 10 to 80 per cent top-up in just over 20 minutes. There are two power outputs – 443bhp or 671bhp – and the more potent version will do 0-62mph in four seconds flat.

This isn't a car that's all about outright performance, though, so most buyers will probably stick with the Single Motor set-up we drove. Even the base Single Motor, which gets a slightly smaller 92kWh battery, can cover up to 400 miles on a single charge.

The 328bhp rear-mounted motor is good for 0-62mph in less than seven seconds. Getting up to motorway speeds is easy, but it feels like the car has run out of puff when you try to overtake. Nevertheless, the ES90 feels really at home on the motorway, where you can appreciate how incredibly quiet it is inside. The only intrusion we noticed was a touch of road noise, although that may have something to do with the 22-inch rims fitted to our test car.

It took us a while to get to grips with the one-pedal driving in the ES90. You have to be very delicate with what feels like a very heavy throttle in order to drive smoothly: a bit too much pressure and the car can bolt forward, while easing off too quickly would make it suddenly slow down. But after a while we got the hang of it.

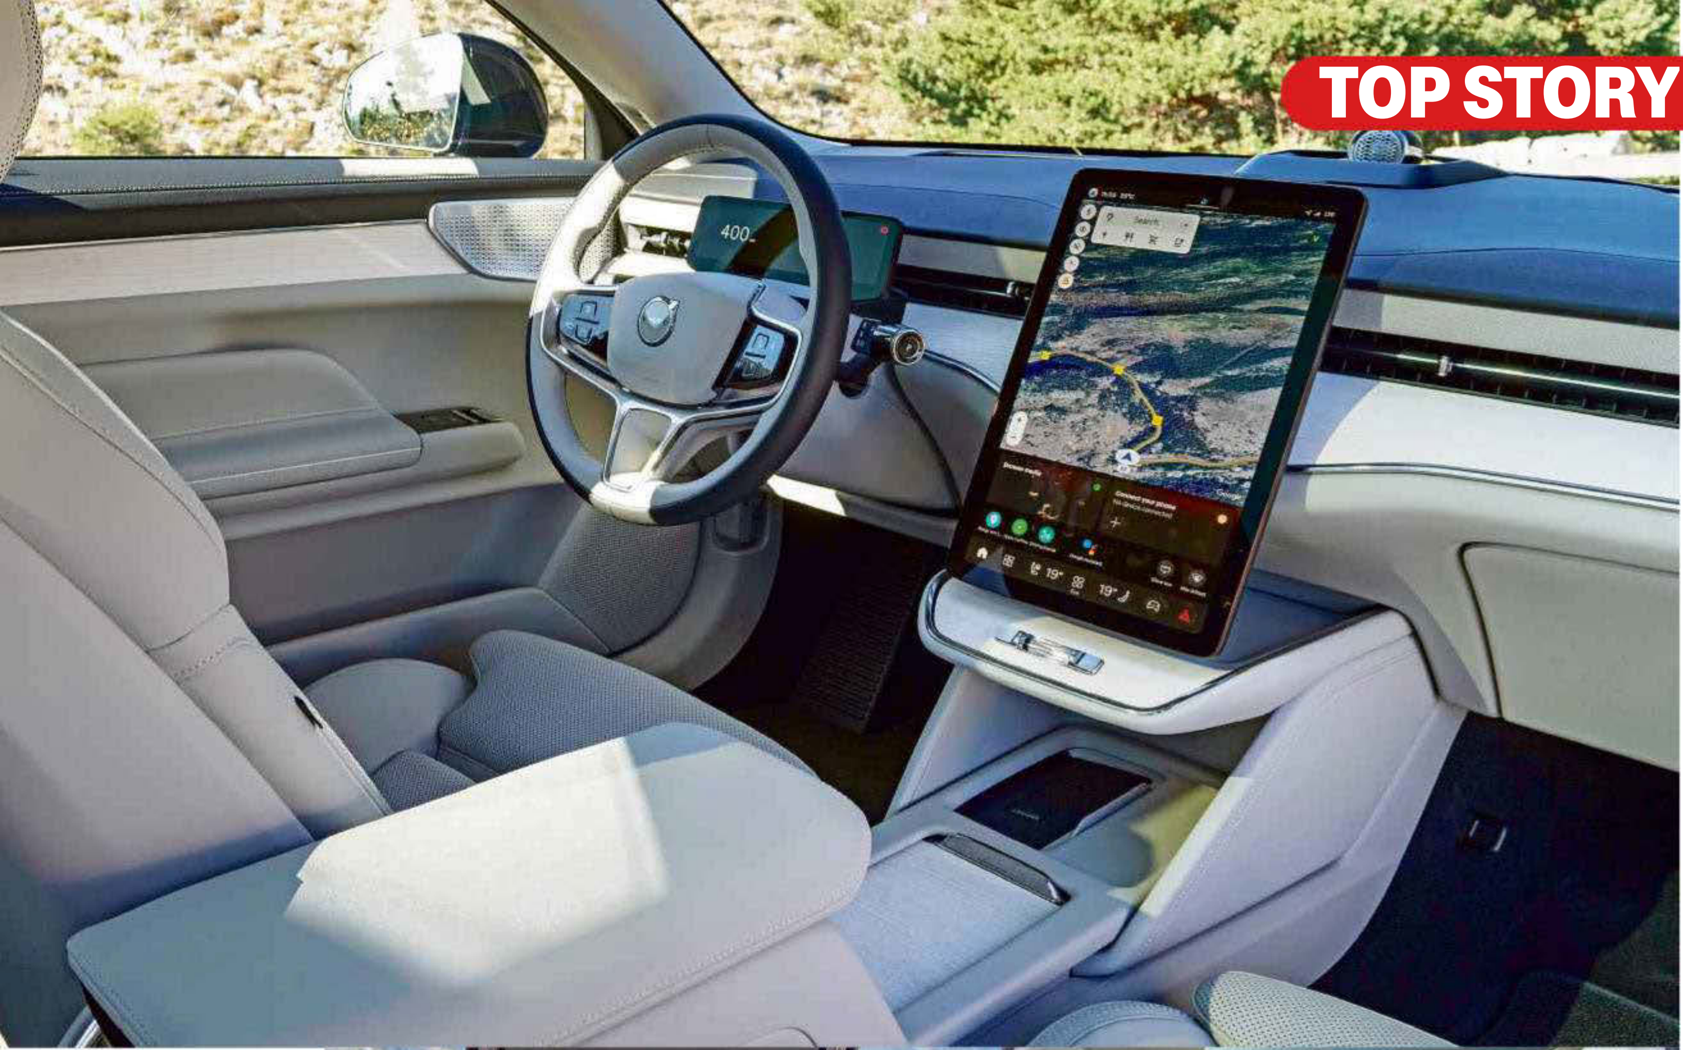
There's also an auto one-pedal mode, which is helpful if your journey involves a mixture of town, country and motorway driving because the car won't slow when you lift off unless it detects a vehicle in front of you. It's a system that's ideal for those who like to 'set it and forget it'.

You could hustle the ES90 on a country road if you were late for a meeting, or picking up your in-laws from the airport, but ultimately, this is a big, heavy car. Even with the steering in the firm setting that adds more weight, the ES90 is still about as vague as a politician on a hot-button topic, and unsurprisingly it leans in the corners.

The ES90 starts from £69,760, with the entry-level model offering a huge range, plus the array of displays you see here, a 360-degree 3D camera system, energy-saving heat pump and 20-inch wheels. But the Polestar 4 is available for nearly £10,000 less, is well equipped and offers 385 miles of range. The Audi A6 e-tron also starts from about £62,000, with a similar 384-mile range.

If you want all the luxuries and tech Volvo offers, upgrading from Plus to Ultra trim raises the price to nearly £80,000. A range-topping Twin Motor model will set you back nearly £90k.

"THE ES90 FEELS REALLY AT HOME ON THE MOTORWAY, WHERE YOU CAN APPRECIATE HOW INCREDIBLY QUIET IT IS INSIDE"



INTERIOR
There's plenty of space in the ES90, and the boot is a fair size, albeit smaller than that in the Polestar 4. Most systems are operated through the touchscreen

VOLVO
GAH 67M
ES 90

VERDICT

★★★⯪☆

FOR those who cover long distances, the Volvo ES90 offers an incredibly quiet and spacious cabin, huge range figures, genuine ultra-rapid charging abilities, good ride comfort and a sophisticated Scandinavian vibe. Yet to us, it seems to lack thought in certain places, particularly when it comes to technology and the rear cabin. The near-£70k starting price is a little steep, too, especially when the Polestar 4 has an exceptional, more modern-feeling and more practical interior, plus a similarly long range, but is available for considerably less money.

Toyota concept hints a

REVEALED Aerodynamic Tokyo concept car gives strong clues to the look o

Ellis Hyde

Ellis.Hyde@autoexpress.co.uk

IT'S hard to believe, but this futuristic-looking concept offers our first peek at the next generation of the Toyota Corolla.

So far, the firm has only released these teaser images and confirmed this new Corolla Concept will be one of several creations it's bringing to the Tokyo Motor Show, which opens its doors on 30 October.

The concept has what appears to be a charging port on the front wing, suggesting this new Corolla is either going to feature plug-in hybrid power – like the latest Toyota Prius – or it'll be purely electric.

Our money is on the latter because Toyota has started to expand its range of EVs, and an electric Corolla would give the Japanese brand a rival to the likes of the Kia EV4, Volkswagen ID.3 and Volvo EX30.

If true, we think an electric Corolla would be sold alongside the current hybrid-powered model, similar to what Toyota has already done with the C-HR hybrid crossover and its all-electric C-HR+ sibling.

We're a long way off an electric Corolla arriving in showrooms but we have a reasonable idea of what it might cost. For example, the current hybrid model starts from around £31,000. With the C-HR starting at a similar price point and the electric C-HR+ expected to be £5,000 more, a Corolla EV could open around the £36,000 mark.

You might struggle to tell that this is a Corolla because it has almost no resemblance to the current model. The sharp, angular nose design is similar to that of the C-HR+, but adds a full-width lightbar and vertical headlights. Meanwhile, the rear will have pixel-style lighting and a small ducktail spoiler, a bit like the one on the streamlined Hyundai Ioniq 6.

The concept isn't a traditional hatchback either, and has a more saloon-like shape, which would help boost efficiency if this really is an EV. Having the wheels pushed out to the corners will maximise cabin space.

The vehicle is just a concept for now, and at the time of writing Toyota hasn't shared any technical details. But it's worth noting that the Small Urban SUV concept the company showed in late 2023 went on to become the new Urban Cruiser that we drove in the summer, while the Sport Crossover concept was a preview of the C-HR+.

The designs of those concepts were modified for the road-going versions, as is often the case. Nevertheless, Toyota's decision to use the Corolla name here suggests to us this concept will eventually lead to a production model.

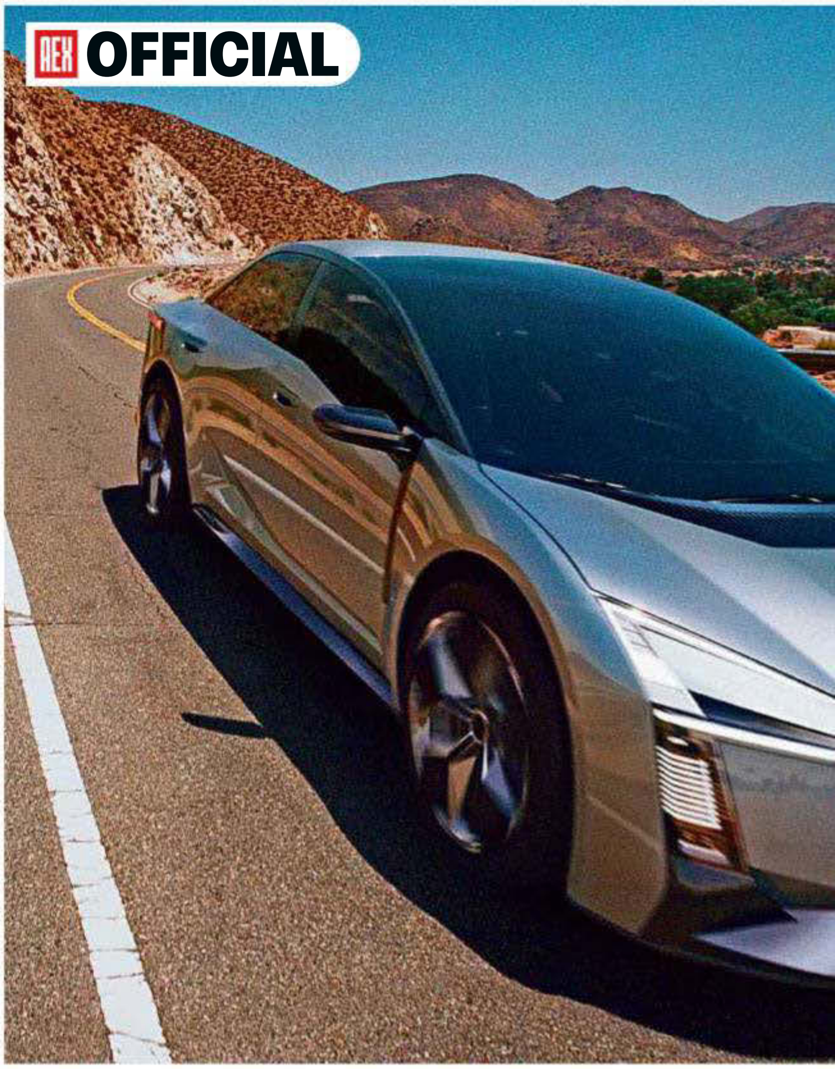
The use of the Corolla badge is part of Toyota's latest naming strategy for its EVs, under which it uses very familiar names to capitalise on their household recognition.

Toyota's UK managing director, Scott Thompson, told Auto Express: "We've got to try and utilise as much of our history as we can."

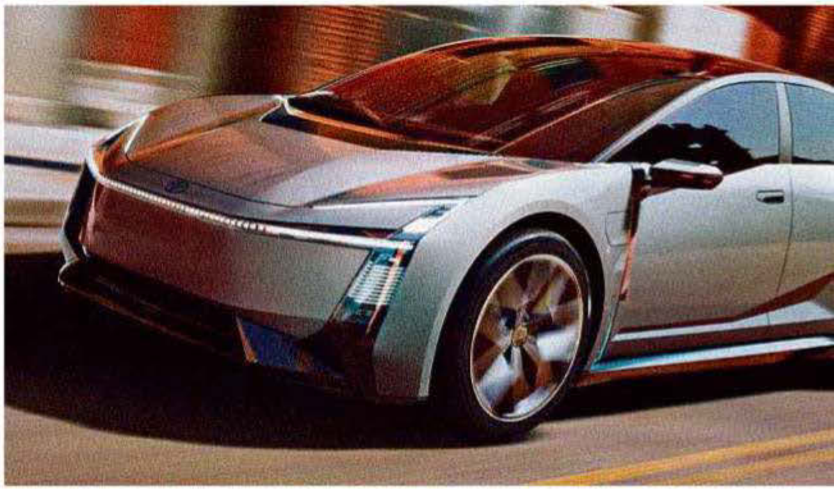
Corolla is one of the longest-serving nameplates in the motoring world, having been introduced in 1966. There have been 12 generations of the Corolla since then, and more than 50 million sold worldwide, so it would make sense for Toyota to use such a widely recognised name for a similarly sized EV.

Toyota isn't the only brand adopting this strategy. Next year, Subaru will launch a rugged pure-electric estate car called the E-Outback, while Volkswagen's new zero-emissions supermini has officially been christened the ID.Polo.

Earlier this year, Toyota pledged to launch nine new electric cars by the end of 2026. A Corolla wasn't part of those plans, meaning it's more than a year away, but among them will be the large off-roader that was previewed by the Land Cruiser Se concept from 2023, and a pick-up truck that will surely wear the well known Hilux name.



**"TOYOTA'S DECISION TO USE THE COROLLA NAM
SUGGESTS IT WILL EVENTUALLY LEAD TO A PROD**



t efficient new Corolla

IE ON THIS CONCEPT
UCTION MODEL"

DESIGN
Concept looks to maximise efficiency through sleek aerodynamics, while the wheel-at-each-corner stance suggests that cabin space will be generous

PLUS Brands issue teasers ahead of unveilings at Tokyo Motor Show

MINI and Subaru are among the car makers at Japan expo next week

LEXUS

LEXUS has clearly lost its mind. At least, that would be one explanation for the brand – known for its reliable and luxurious cars – unveiling a six-seat, six-wheeled minibus in Tokyo. This bold creation is only a concept, but it could be telling that it's called the LS Concept – because the first LS put Lexus on the map back in the nineties.

SUBARU

RALLY fans, rejoice. Subaru hasn't given up on its STI brand, and it'll show two new concepts at the Japan Mobility Show. The Performance-E STI and Performance-B STI are visions of the future of its hot sub-brand. The more ambitious of the two is the former, which will "spearhead Subaru's new generation" of high-performance cars.

MAZDA

MAZDA'S new concept car will give us an insight into the company's future design direction, and possibly a fresh flagship. The concept seems to take the current Mazda 3's design to a new extreme. While it doesn't preview the rumoured successor for the RX-7 sports car, it could hint at a new rear-wheel-drive saloon or four-door coupé.

TOYOTA

TOYOTA could be gearing up its ultra-luxury Century sub-brand for global expansion. The new Century cars will "take on the high-end market as the top of the top, one of one", according to Toyota's Chief Branding Officer, Simon Humphreys, and could be previewed by a high-riding two-door concept car.

MINI

THE collaboration between MINI and British fashion brand Paul Smith is being revived for a new generation. The firm has teased a new-model reveal that's set to take place at this year's Tokyo show, with the social media video showing a car inside a timber crate being opened by Paul Smith himself. But beyond this, there's almost no official information from either of the brands.

New T-Roc on the road more tech and mature

EXCLUSIVE We ride in the next VW T-Roc, giving us a taste of what lies ahead

FIRST RIDE

ESSENTIALS

Volkswagen T-Roc 1.5 eTSI Life

Price: From £30,000 (est)
On sale: January 2026
Powertrain: 1.5-litre four-cylinder turbo petrol
Power/torque: 148bhp/250Nm
Transmission: Seven-speed automatic, front-wheel drive
0-62mph: 9.0 secs (est)
Top speed: 130mph (est)
Economy/CO2: 50.4mpg/130g/km (est)
Size (L/W/H): 4,372/1,828/1,573mm

> "THE T-ROC SHOULD BE AN SUV IN WHICH YOU CAN COVER LONG DISTANCES WITHOUT ANY STRESS"

Robin Hornig

VOLKSWAGEN is putting the final touches on the next-generation T-Roc, and we've had an exclusive ride in the car with the firm's Head of Development, Kai Grünitz.

The looks might be evolutionary, but it doesn't take long to realise this hugely popular model is much more refined than its predecessor.

One big weakness of the outgoing T-Roc was the feel of its interior, as Grünitz candidly admits. Now, the dashboard and doors feature soft-touch foam backing, and a new design of door handle allows for a clean, smooth surface. Grünitz acknowledges some makers' move to electronic releases, and defends VW's choice: "In the event of a crash, it's vital to have the mechanical release in the same place."

This new model is bigger than the old one, too. New crash-test rules have led to the T-Roc lengthening by 120mm. The wheelbase is also up by 35mm, which benefits those in the rear with more knee room and improved headroom. "It's simply a much more practical car for everyday use now," says Grünitz.

Engines will range from mild hybrids to a new full hybrid next year. The only non-hybrid model is the hot T-Roc R, which will continue with the familiar 328bhp 2.0-litre turbo from the Golf R hot hatch. Our test car has the familiar 1.5-litre eTSI petrol engine with 148bhp and 250Nm of torque.

Under the skin, VW has borrowed the adaptive-damper technology from the larger Tiguan. This provides a much wider spread between the driving modes, while the suspension bushings have been retuned and the steering calibrated for a smooth feel.

The result is a car that feels sporty without being harsh, and is much more relaxed on the motorway.

Improved sound deadening is also a highlight. Even on large wheels, the T-Roc remains quiet, with road noise kept firmly in check. This should be an SUV in which you can cover long distances without any stress.

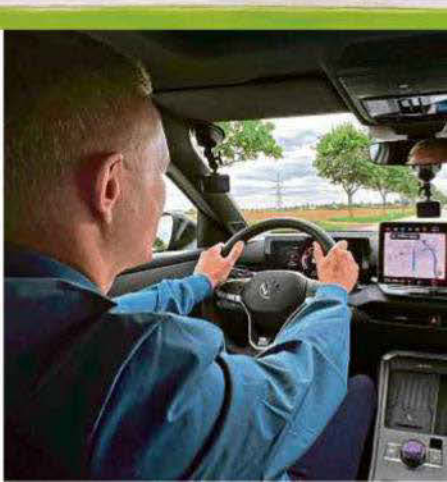
As for technology, the T-Roc has a Travel Assist system that will soon brake for red lights and stop signs, while app-controlled parking and a 360-degree camera view are also available. The multi-stage voice control uses both on-board and cloud-based recognition. To top it off, ChatGPT is integrated.

Looking ahead, Grünitz announced a new 'Sensor Set 2.0', which is due in 2028 and will enable a true hands-off driving experience.

It's clear this bestseller isn't just being brought up to date for the here and now; it's also being readied for the next big leap in technology.

VERDICT

SOFTER, quieter and better than ever – the new VW T-Roc has the ingredients to continue its smash-hit success. VW has addressed the old car's biggest weaknesses, with the new model getting more space, a high-quality interior, and a more composed driving experience.



with feel

ON THE ROAD Suspension and steering have been tuned to make the new T-Roc feel much more grown up than its predecessor

OFFICIAL
WOB TG 574

Final Edition will come with 3.0 V6 turbodiesel engine and unique details

VW Touareg signs off with Final Edition trim

VOLKSWAGEN will shortly say goodbye to its Touareg SUV with a Final Edition model. Its specification is based on the R-Line Black Edition, fitted specifically with the 3.0-litre V6 diesel powertrain. It'll be available to order until production ceases in early 2027.

Unique design elements include laser-etched Final Edition badging on the rear window surrounds, plus new door-sill garnish. These are in addition to the leather upholstery, multi-colour ambient lighting, and 21-inch alloy wheels.

UK pricing has not been announced yet, but we expect it won't move much from the current model's £74,525 asking price.

The V6 diesel engine produces 281bhp and 600Nm of torque, which powers all four wheels via an eight-speed automatic transmission.

To dismiss the end of Touareg production would be a mistake, though, because this high-class SUV represents more than just the end of a model line. It's also the last surviving vestige of VW's ultra-ambitious era of engineering under the leadership of its late chairman Ferdinand Piech. This didn't just result in the Touareg and Phaeton four-door saloon, but also drove the development of the VW Group's profit-generating high-end models such as the Bentley Continental GT and Porsche Cayenne.

The original Touareg was brought to market in 2002 as an ambitious, high-cost SUV designed to rival cars such as the BMW X5 and Mercedes GLE (or ML as it was badged at the time). The difference was that the Touareg had genuine off-road ability, with locking differentials and height-adjustable air-suspension.

Curiously, in the documentation alongside the Final Edition's release, VW said "production of the Touareg combustion engine model is due to end for UK customers in 2027", suggesting that while the SUV might be put to sleep as we know it, the moniker could be revived some time in the future with an EV powertrain.

EV grant for ID.4 and ID.5

TWO months after the Volkswagen ID.3 qualified for the Government's Electric Car Grant, its bigger siblings, the ID.4 and ID.5, have followed suit.

Both cars receive the base £1,500 grant, but this is still enough to bring their base price down to £35,495.

For this, the ID.4 (pictured) is available with the smaller 52kWh powertrain in Essential and Match trims, while the ID.5 with the same battery is in Match alone. Despite there being two different specs of ID.4, and the ID.5 previously costing more than its boxier sibling, all of these models were shifted down to the same £36,995, a sliver below the sub-£37,000 qualifying threshold.

Five car brands taken to court over emissions

JUST over a decade on from the start of the Dieselgate emissions scandal, car companies are once again taking the stand over claims regarding the use of so-called emissions test 'defeat devices'.

On October 13 at the High Court in London, representatives from Citroen/Peugeot, Ford, Mercedes-Benz, Nissan and Renault began their defence for a lawsuit in which prosecutors accuse them of manipulating official emissions tests by installing specialised devices in their cars.

All five manufacturers deny wrongdoing, while 220,000 car owners have accused them of being misleading and it's thought that the scandal could potentially involve as many as 1.6 million vehicles. The brands involved in this case are in addition to a further nine manufacturers who are under fire for similar claims.

A verdict is not expected until autumn 2026. It's also possible that things could be settled out of court; in 2022 VW decided to settle and ended up paying roughly £193 million in compensation to 91,000 British motorists.

In the meantime, YouGov polling suggests that roughly two-in-three people do not trust car makers to tell the truth about emissions or the environmental impacts of their vehicles, with 69 per cent saying it's unacceptable that cars potentially with defeat devices are still being driven on UK roads.

T-Cross (above) got the same Euro NCAP rating as budget Chinese hatch

T-Cross and Box both given three-star NCAP rating

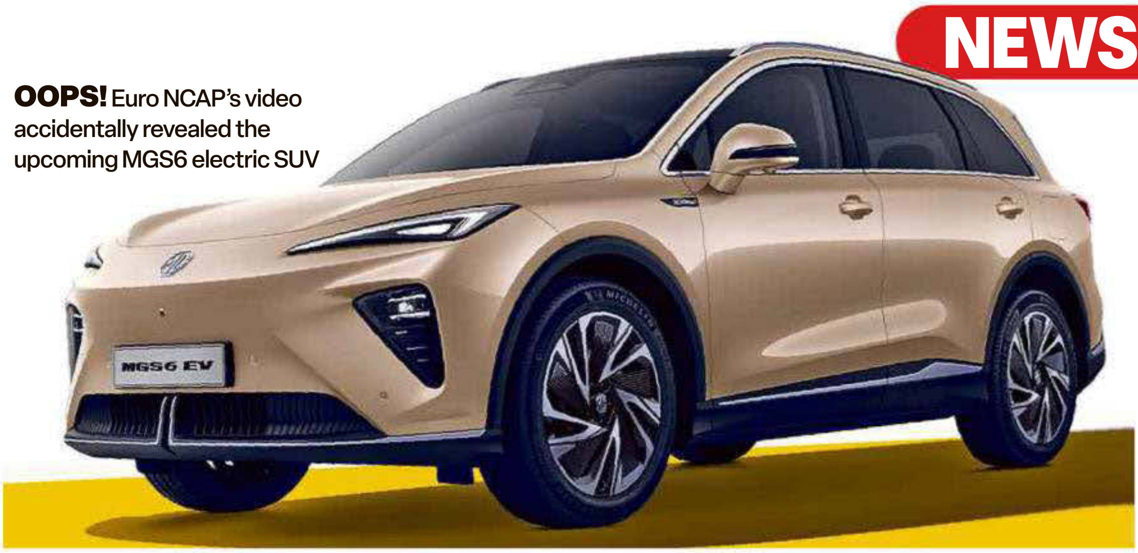
VOLKSWAGEN will likely be disappointed after the T-Cross received the same three-star rating as a cut-price Chinese electric hatch after undergoing Euro NCAP's tough safety tests for a second time.

The T-Cross was originally tested in 2019 and awarded the full five stars by the safety experts. But under the stricter 2025 tests, the SUV could only muster a three-star score, mostly due to its 57 per cent rating in the test's Safety Assist portion.

According to the test sheet, the VW's autonomous emergency braking system showed "marginal" performance. But the T-Cross earned decent ratings for adult and child passenger protection.

Also scoring three stars was the Dongfeng Box (below) – a budget Chinese hatchback. It scored better than the VW in the test's Safety Assist section, but didn't offer quite such solid passenger protection.

Euro NCAP said the Dongfeng "does not match the safety performance of other small EVs" it has tested and added: "It was a concern that the [Box's] spot welds were compromised during our tests and could be further compromised in higher-speed accidents. Such a failure must be addressed to match competitor vehicles."



OOPS! Euro NCAP's video accidentally revealed the upcoming MGS6 electric SUV

MGS6 is out in open thanks to Euro NCAP

Richard Ingram

Richard.Ingram@autoexpress.co.uk

THE new MGS6 EV has been inadvertently revealed by Euro NCAP, even before its maker has had a chance to confirm the car itself. It means our first look at the new MG comes while it's being evaluated by the safety organisation, rather than via the glossy press pictures we'd usually publish when a new car is unveiled.

The positive for MG is that its latest model has received a full five-star Euro NCAP rating, as well as strong scores for adult and child-occupant protection. The S6 EV scored 92 per cent and 85 per cent respectively in the two categories, as well as 84 per cent for vulnerable road users, and 78 per cent in the safety assist test.

Taking overall design inspiration from the smaller MGS5 EV, the MGS6 is marked out by a tweaked headlight design and reprofiled bumpers. It also gets a visibly longer wheelbase and a boxier rear end, which should help make the larger model feel far bigger inside.

NCAP's crash test video provides a glimpse of the Chinese model's rear, which highlights significant design differences between the S5 and S6; the S6 has a much longer overhang and a slimmer, full-width lightbar, while the lower part of the bumper gets some chrome trim and an artificial rear diffuser.

"THE POSITIVE FOR MG IS THAT ITS LATEST MODEL HAS RECEIVED A FULL FIVE-STAR EURO NCAP RATING"

We've not been able to get a proper look at the car's interior, but another screengrab from the video shows a familiar steering-wheel design and fully digital instrument cluster. The rest of the cabin remains under wraps, although we assume MG will choose to fit a large central display, similar to that seen in the smaller S5.

Auto Express approached MG UK for comment, with a spokesperson telling us that three variants of the car will be available to order from the end of November, but plans for a full unveiling remain hushed for now.

Pricing will also be revealed later, with the company saying buyers can expect MG "to maintain its reputation for highly competitive pricing and excellent overall value".

PAGE 50: The Chinese Power List

Is Britain's catalytic converter theft epidemic finally over?

Tom Jervis

Thomas.Jervis@autoexpress.co.uk

REPORT Cat thefts are down, but criminals are now targeting EV cables

EXCLUSIVE

THEFTS Criminals have turned away from catalytic converters in favour of the copper in EV charging cables

HOW CAT THEFTS HAVE FALLEN YEAR BY YEAR

Year	2019	2020	2021	2022	2023	2024
Total thefts across 30 forces	3008	5331	6909	5442	1991	150

CATALYTIC converter theft may soon be a thing of the past. Exclusive new Auto Express data has lifted the lid on its decline – raising the question as to why this might be the case, and what thieves are now opting to steal instead.

Following a Freedom of Information request to all 48 police constabularies across the UK, Auto Express can reveal that in 2024, the number of catalytic converter thefts fell by 98 per cent compared with 2021.

A prime example of how thefts have decreased is in South Yorkshire, which in 2021 recorded 850 incidents of theft registered under the term 'catalytic converter'. In 2024, only five crimes of this kind were recorded, representing a huge 99.4 per cent fall.

Other forces also saw significant drops in the thefts; the number registered by Humberside Police, for example, dipped by 84.4 per cent from 192 in 2021 to 30 in 2024.

Assistant Chief Constable of the National Police Chiefs Council (NPCC), Sarah Grahame, said: "Police forces across the country have been working with partner agencies over recent years to tackle the issue of catalytic converter thefts, and I am pleased that these efforts have resulted in a reduction."

She said that several preventative measures have been implemented by police, including the creation of a database to register and track stolen catalytic converters.

However, police efforts aren't the only factor behind the decline; the wholesale price of rhodium – one of the precious metals in catalytic converters – hit a 10-year high in 2021, but has slowly fallen since.

Nevertheless, the price of rhodium is still greater now than it was in the early part of 2020, and catalytic converter thefts continue to fall, indicating there has been a shift away from the crime.

So what are thieves now choosing to take instead? One target could be EV charger cables, because the number of incidents of cable cutting has exploded by 400 per cent in the past year, with criminals attempting to retrieve the valuable copper inside.

Charging firm InstaVolt has recently turned to hiring private security and even fitting GPS trackers to its cables in order to deter theft.

One of the main incentives behind this type of theft is the low conviction rate. Grahame pointed out: "Like other types of acquisitive crime, investigators can face difficulties in identifying suspects and obtaining evidence, which can make seeking prosecutions difficult."

> **"SOUTH YORKSHIRE RECORDED 850 SUCH THEFTS BACK IN 2021, BUT IN 2024, THERE WERE FIVE"**

Toyota set to wow with new 700bhp supercar

SUBBED
THE SOUL LIVES ON.

Toyota promotional material gives only the merest clue to the car's looks

TOYOTA will unveil its new V8-powered supercar on 4 December, it's been revealed.

The brand has released only a single official image of the car so far, showing one side of the front end. It reveals a slim LED headlight and a large lower intake. However, there's also a wider shot of the same car on signage at Fuji Speedway circuit in Japan.

Toyota revealed some audio of the engine before the 2026 Tokyo Mobility Show, which confirms the supercar will feature a V8 engine, probably turbocharged and possibly even hybrid assisted in the case of any road version.

Power and torque outputs are purely speculative at this stage, but it will have to have more than 700bhp to be competitive.

The car's proportions suggest that the engine sits in front of the driver, but behind the front axle, making it front-mid-engined. It's also likely that drive from the engine will be sent through a transaxle incorporating a limited-slip diff and auto gearbox.

The car's construction is also rumoured to be of carbon fibre.

ELECTRIFIED
Torres is the first KGM model to get a hybrid powertrain, and joins the petrol and pure-electric versions of the Korean SUV

New KGM Torres Hybrid SUV is cheaper than the petrol version

Steve Walker

Steve.Walker@autoexpress.co.uk

KGM has bolstered its Torres range with a new hybrid engine option. The powertrain, which is branded as a 'Dual-Tech Hybrid' system, has been developed in partnership with BYD and should broaden the appeal of the Torres in the competitive mid-size SUV class.

The Korean brand, formerly SsangYong, usually trades on the simple premise of offering a lot of car for the money, and this looks to be the case with the Torres Hybrid. Prices start at £35,995 in upmarket K40 trim, undercutting the base petrol Torres in lesser K30 specification by £800.

The Hybrid pairs a 1.5-litre turbo engine with two electric motors and a six-speed e-DHT automatic transmission. Total power for the system is rated at 175bhp, and torque is 300Nm. It's enough to get the 4.7-metre, 1,670kg Torres from 0-62mph in nine seconds, before maxing out at 112mph. The car can tow up to 1,300kg.

KGM claims that the Torres Hybrid can do 95 per cent of city driving on electric power and all-electric driving is still possible at speeds of up to 62mph, supported by a three-level regenerative braking system to recharge the battery. Official WLTP fuel economy is rated at 46.1mpg, which doesn't look particularly special in a world where the Nissan's Qashqai e-Power records 62mpg. We'll have to wait to see how the Torres performs on our real-world tests.

This is the first hybrid system offered by KGM and it has nine different driving settings that adjust the powertrain for different scenarios. These various set-ups include an EV mode that will stick with electric power for as long as possible.

The new Hybrid joins the standard petrol versions of the Torres, as well as the all-electric Torres EVX, in what is now a comprehensive line-up.

> **"KGM CLAIMS THAT THE TORRES HYBRID CAN DO 95 PER CENT OF CITY DRIVING ON ELECTRIC POWER"**

Safety regs force Jeep Wrangler out of Europe

IT'S the end of the line for the fourth-generation Jeep Wrangler, Auto Express can confirm. The brand will stop taking orders for its famous 4x4 by the end of this year, and the final cars will be delivered to customers within the first half of 2026.

Jeep's head of product planning in Europe, Marco Montepeloso, said: "There are several regulations that are affecting the compatibility of Wrangler with the European region, like the safety regulation that's coming in mid-2026 that needs some additional features that will be hard to implement in it."

Unsurprisingly, emissions also played a role in the Wrangler's demise. The turbocharged 2.0-litre four-cylinder petrol engine that every UK model uses pumps out up to 269g/km of CO2. That's almost as much as the Range Rover Sport SV.

When the Wrangler might return remains unclear, so in the meantime, the upcoming new Jeep Recon EV will serve as the brand's most hardcore off-roader here. It's due to be revealed in full later this year.

New Jeep Compass driven p18

Quirky FT-Me concept gets Government support to develop production car

FT-Me concept is the basis for Toyota's study

WHILE one side of Toyota's R&D team is busy preparing a 700bhp supercar (p16), the firm's UK outfit has confirmed newly announced government funding will accelerate the "feasibility study for a lightweight battery-electric vehicle" led by Toyota Manufacturing UK in Derby.

The study will bring together a consortium of partners including ELM Mobility Ltd – a designer and producer of purpose-built, last-mile urban delivery vehicles. Savcor will help with the design and integration of the car's solar roof, while the University of Derby will provide expertise in user behaviour and the viability of the sun's energy as a power source.

Toyota hopes the result will be a showroom-ready alternative to the Citroen Ami – a short-range, urban-focused, two-seat quadricycle based on this year's 2.5-metre-long FT-Me concept.

The study will be undertaken at Toyota's Burnaston facility, with outcomes tested at the University of Derby. The study will also look at using recycled materials, plus economies of scale using parts common to ELM's delivery vehicle.

> “A lot of time and effort has gone into ensuring the new Compass is capable of getting down and dirty”

Jeep Com

Ellis Hyde

Ellis.Hyde@autoexpressco.uk

FIRST DRIVE The Avenger has been a s
so it’s upscaled the formula for its third-

THREE years ago, the Jeep Avenger burst on to the scene like Kevin Hart – small, fun, energetic and versatile. The baby SUV may be the antithesis of the unstoppable four-wheel-drive Wrangler that the brand is famous for, but clearly that’s what people wanted. More than 200,000 have been sold so far, mostly in Europe.

With Jeep’s UK sales now triple what they were before the Avenger’s arrival, the decision to super-size the winning formula to create the new third-generation Jeep Compass was a no-brainer.

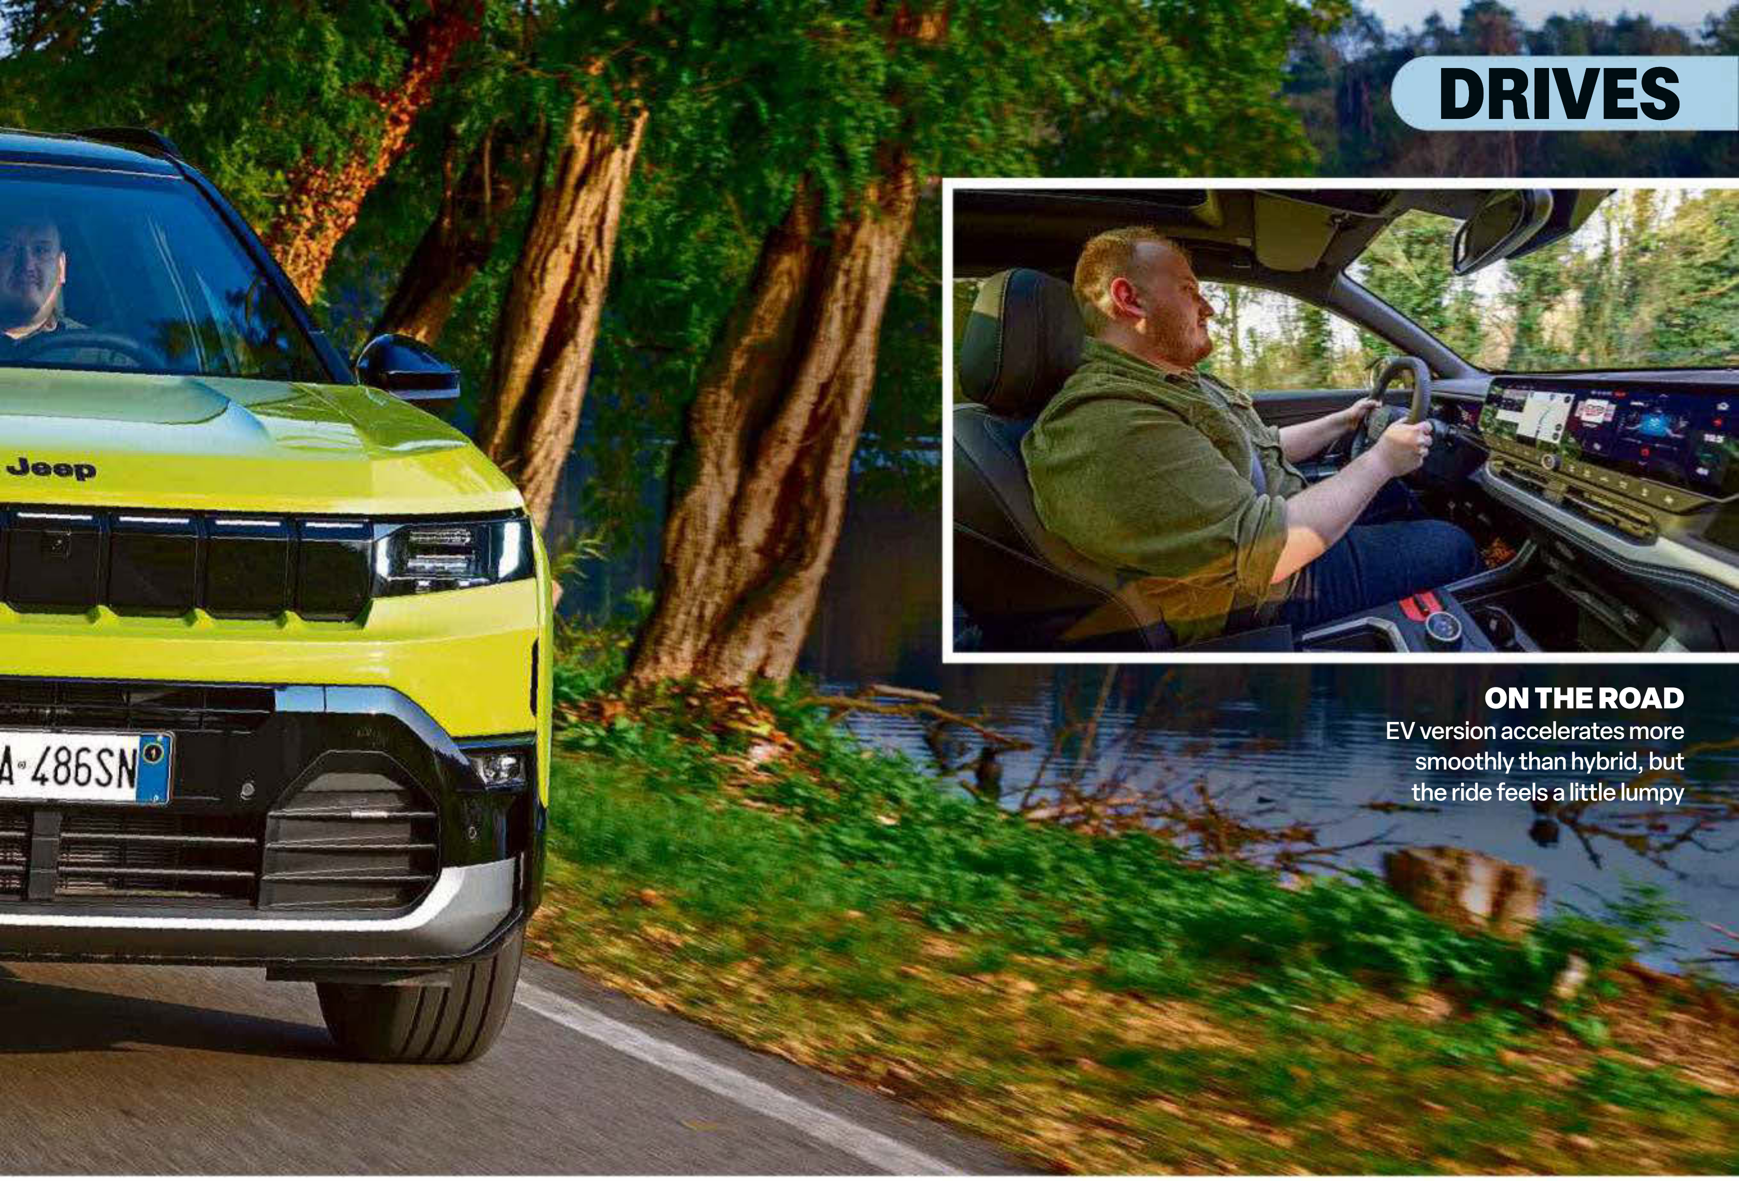
It uses the same STLA Medium platform as the latest Peugeot 3008 and Vauxhall Grandland, and eventually it’ll be available with the same selection of hybrid, plug-in hybrid and pure-electric powertrains.

This being a Jeep, a lot of time and effort has gone into ensuring the new Compass is capable of getting down and dirty. Very short front and rear overhangs create the best approach, departure and break-over angles of any SUV on this platform. It also has more than 200mm of ground clearance and a maximum wading depth of 470mm.

It’s what people expect from a Jeep and will give them confidence when a festival car park turns into a total quagmire. As will the dedicated ‘Selec-Terrain’ modes for Snow and Sand/Mud, which alter the power delivery and traction control.

Key Jeep styling traits are present, including the squared-off wheelarches and the iconic seven-slot grille design. It’s blanked-off, like the Avenger’s, but on certain models each segment is illuminated. The front camera is located on the grille, too.

The new Compass represents a huge step forward in interior design, quality and technology over the



ON THE ROAD
EV version accelerates more smoothly than hybrid, but the ride feels a little lumpy

pass

sales hit for American brand, -generation Compass SUV

previous generation. Every model features a 10-inch instrument panel with clear, simple graphics, and a whopping 16-inch touchscreen. Jeep's latest infotainment system offers lots of functionality, with three customisable widgets on the homepage, plus climate controls permanently displayed on either side, including if you connect to Apple CarPlay or Android Auto (both wireless).

We found menus don't always load instantly, and you have to be quite precise about how you press or swipe on the homescreen to ensure you interact with the right widget block. Luckily there is a row of shortcut buttons below the display, including one for the ADAS menu that will switch off selected safety systems if you press for long enough.

We like that the squared-off steering wheel has chunky buttons as well, while the tall centre console gets a big red toggle switch for the drive modes and a rotary gear selector that's well damped, and satisfying to use. The leather on the dashboard is a nice touch, and everything feels sturdy, but there is still a lot of plastic in there.

ESSENTIALS

Jeep Compass e-Hybrid First Edition

Price: £35,700 **On sale:** Now
Powertrain: 1.2-litre 3cyl petrol hybrid
Power/torque: 142bhp/230Nm
Transmission: Six-speed automatic, front-wheel drive
0-62/top speed: 10.3 seconds/117mph
Economy/CO_2: 47.9mpg/133g/km
Size (L/W/H): 4,552/1,928/1,675mm

On one hand, the plastics, thick rubber floor mats and fabric seat upholstery suit this car's persona, plus there are some Jeep 'easter eggs' dotted around. But we understand buyers may want a mid-size SUV that looks and feels more high-quality. If that's you, the Hyundai Tucson, Nissan Qashqai and Volkswagen Tiguan immediately spring to mind.

There were also a few electrical gremlins in the two models we tested. It took several minutes for the head-up display in one to wake up, for example, and the sunroof in the second refused to do anything. Fortunately it was closed.

In terms of space, the Compass offers plenty of storage for the detritus that family life generates, with a total of 34 litres of trays and cubbies. The back seats have more than enough legroom for six-feet-tall adults, as well as adequate headroom – a benefit of the car's boxy shape. We think you could just about squeeze three people onto the rear seats, or if you have small children there are two sets of Isofix mounting points on the outer seats that are covered by zips.

The Compass offers 550 litres of boot space, which puts it in the middle of the mid-size SUV pack. The Qashqai has up to 504 litres, for instance, ▶

Apple CarPlay

EQUIPMENT

Standard kit on all models includes two big digital displays – including the 16-inch touchscreen – wireless phone connectivity and keyless entry

while the Kia Sportage has a 591-litre load area. At least there's space under the boot floor in the EV for the charging cables.

There will only be one all-wheel-drive version of the new Compass, which isn't arriving until next year and will be a dual-motor EV. The Vauxhall Grandland is already available with a similar set-up, but the Jeep gets a unique e-motor for the rear axle that supposedly can deliver up to 3,100Nm of torque at the wheels – the perfect amount, we've been told, for the car to conquer a 20-degree slope with absolutely no traction on the front wheels.

As well as additional grip, the all-wheel-drive Compass 4xe will deliver a combined 370bhp and even greater off-road ability, thanks to an extra 10mm of ground clearance.

That's still to come, as is the e-Hybrid Plug-In version that will pair a 1.6-litre four-cylinder petrol engine with a 17.9kWh battery and a single electric motor for more than 50 miles of pure-electric driving range. There's also going to be a long-range version of the Compass Electric, with a substantial 97kWh battery and up to 403 miles of range.

For now, the Compass is available with a 1.2-litre three-cylinder turbocharged petrol engine and a six-speed dual-clutch automatic transmission that has a 21bhp electric motor built-in. There's also the EV version with a single 210bhp e-motor and 73kWh battery providing up to 310 miles of range. We tried both on the outskirts of Milan.

In the hybrid, when you're not driving on the e-motor (you can tell because the speedo turns blue), the three-cylinder engine hums away in the background. Floor the throttle, and there's a slight delay until the gearbox finally kicks down, then the engine emits a rather gruff drone as you very

PRACTICALITY
High roofline means headroom is good, while six-foot-tall passengers will be comfortable. A boot capacity of 550 litres (below) is average for the class, and there is storage underneath for the pure-electric model's charging cables

steadily gain speed. If you need to accelerate hard – when joining a motorway, for example – we'd suggest using the paddles behind the steering wheel to force the gearbox into action.

The Compass Electric provides smoother acceleration and a generally more refined driving experience, helped by its one-pedal driving capability. We did notice some whine from the EV's motor though, and a fair amount of road noise coming into the cabin in both versions.

Visibility is decent and the driving position is suitably high. The big, heavily sculpted bonnet not only makes you feel like you're driving a much larger 4x4, the squared edges also help with placing the car on the road, particularly in town.

While the suspension does a decent job of absorbing the impacts from road imperfections, the ride feels slightly lumpy, and the car bounces when you drive over potholes and the like. It rolls through corners too, but that's hardly surprising.

From November, Jeep will offer the Compass in entry-level Altitude trim, with prices starting from £34,520 for the hybrid and £38,200 for the EV. However, at the time of writing, only First Edition specification is available, commanding a premium of around £1,000 over the proposed entry-level trim.

VERDICT ★★★★☆

THE new Jeep Compass capitalises on the Avenger's enormous success by offering a similar combination of ruggedly handsome looks, an interior built to last, good on-board tech and a selection of powertrains that should suit every customer in its class. It's not as fun to chuck around as its sibling, or the plushest mid-size SUV around, but it's perfectly practical and plays on Jeep's off-road heritage.

Alastair Crooks

Alastair.Crooks@autoexpress.co.uk

IT'S been 12 months since we first drove Leapmotor's T03 city car and C10 SUV, but now it's time for possibly the most important model the brand will launch in the UK: the B10.

Clearly aligned with the C10 more than the dinky T03, the B10 sits somewhere in between the hugely competitive B and C-segment SUV markets – rivalling the likes of the Ford Puma Gen-E, Kia EV3 and MGS5 EV. It also has to compete with fellow Stellantis group products including the Peugeot E-2008 and Vauxhall Mokka Electric.

Leapmotor is keeping things very simple with the B10 in the UK; there's just one 67.1kWh battery and a high-spec trim level. That gives the car a range of 270 miles, much more than you get in the Ford Puma Gen-E (234 miles) and even more than the Mokka Electric and E-2008, which do 248 and 250 miles respectively. The MGS5 EV Long Range can do 298 miles on a charge, however.

During our test drive, which included plenty of motorways, country roads and city driving, the B10 returned efficiency of 4.1 miles per kWh, which equates to 279 miles of range. A heat pump is standard on the B10, so we'd expect it to get near to its claimed range in the winter, too. Charging speeds stand at a decent 168kW, enabling a 30 to 80 per cent top-up in a competitive 20 minutes.

The rear-mounted motor provides 215bhp and 240Nm of torque, resulting in a 0-62mph time of eight seconds and a top speed of 106mph, although the B10 actually felt a little faster than this.

It weighs 1,845kg, and isn't a car you'd call fun, but body roll wasn't too severe in tight corners, while the low-slung battery certainly helped to keep it stable.

We were less enamoured by the steering, which felt incredibly light around town and suited the tight 10.7-metre turning circle, but lacked feedback.

The three driving modes of 'Comfort', 'Standard' and 'Sport' tweak the steering weight and throttle response to a small degree, and the same can be said of the brake-regeneration levels. Even in the maximum 'Strong' setting, it's still nowhere near a one-pedal experience, though.

The ride quality is generally very good. The fixed dampers are set up to prioritise comfort, which is a welcome decision. Low-speed obstacles such as drain covers and speed bumps are dealt with easily, although the B10 has an odd tendency to jiggle in the immediate aftermath. At motorway speeds the ride settles but wind noise ramps up, especially around the door mirrors.

The B10 is a big car for the segment it's targeting – larger in every dimension than the Puma Gen-E or MGS5 EV. Having a wheelbase of 2,735mm (just 90mm shorter than the C10) means the B10 feels almost as spacious inside as its bigger brother, too. Tall passengers won't feel remotely cramped in the rear, helped by the flat floor. The 430-litre boot is no more than average for the class, though.

"During our drive, the B10 returned efficiency of 4.1mi/kWh, which equates to a range of 279 miles"

What isn't average is the B10's kit list. Design trim includes a heated steering wheel, heated and ventilated front seats, a wireless smartphone charger and automatic air-conditioning, plus the ability to charge appliances from the battery.

On the dash there's a 14.6-inch touchscreen and an 8.8-inch driver's display. The main screen offers lightning-quick responses to inputs and crisp resolution. However, the menu set-up can feel a bit overwhelming and there's an over-reliance on the screen for almost every function; you can count the physical switches inside the B10 on one hand.

The SUV has yet to be tested by Euro NCAP, but it should get good scores for safety technology because there's adaptive cruise, lane-centring control and hands-off detection.

Yet the implementation of these systems wasn't great in our experience. The lane centring was too aggressive, the drowsiness warning went off seemingly at random, and opening the door caused that side's indicator to start. Turning off safety aids is a laborious task, completed via the touchscreen, and you have to do it every time you start the car.

Interior quality is largely decent, however. It all felt well enough screwed together, if a little unimaginative. The hard plastic passenger grab handles are a bit odd, and we're not sure about the longevity of the flip-down cup-holders.

Where the B10 impresses, seemingly like every other Leapmotor, is price. With Leapmotor's self-imposed 'Leap-Grant' of £1,500 to counter its lack of eligibility for the Government Electric Car Grant, it starts at £29,995. That's sensational value.

Leap

FIRST DRIVE We get behind the

LEAPMOTOR
B10
HA·314SM

ONE THE ROAD
B10 has comparatively soft suspension, which means it's comfortable, but isn't at all fun

INTERIOR
There's plenty of space inside the Leapmotor, although the boot is merely average. Dash is dominated by a touchscreen that controls most functions

VERDICT ★★★★☆

IMPRESSIVE efficiency and range combined with a spacious interior make the Leapmotor B10 a solid contender. A huge kit list makes it even more attractive, and that's before you get to its bargain price. There's a lot to like, and we'd say it's Leapmotor's most convincing offering yet, even if nannying safety tech and a mediocre drive let it down slightly.

Genesis GV60

FIRST DRIVE Revised South Korean coupé-SUV is more than a match for its premium European competitors

Richard Ingram

Richard.Ingram@autoexpress.co.uk

IF you ever travel to Korea, as I did earlier this month, you'll notice that along with all the Hyundai and Kia models, there are lots of Genesis cars lining the city streets. The locals are a patriotic bunch, but the premium brand's appeal in the western world has so far struggled to gain traction.

On face value, it's not hard to see why. The Brits, in particular, are fierce badge snobs; swapping an Audi, BMW or Mercedes for a little-known upmarket brand, no matter how polished, is a tough sell.

But now that the company has been around for a few years, it's time for a host of product refreshes. Genesis began with a lightly tweaked GV70, followed quickly by the much-improved and elongated G80 Electrified. But now's the time for the brand's only ground-up EV: the swoopy GV60 SUV.

Leading the changes for this Audi Q4 e-tron alternative is a cleaner, more modern look, with extra body-coloured trim, reprofiled bumpers and sills, plus new Micro Lens Array headlights. There are some new wheel designs, too.

Inside, the big news is the 27-inch panoramic OLED screen that stretches from behind the new 'D-shaped' steering wheel right across the dash in a single, unbroken display. It not only looks great, but also offers excellent functionality and easy-to-decipher menus, each hidden behind clearly labelled tiles. The instrument cluster is customisable and is complemented by a helpful head-up display.

Genesis seems to be one of the few brands not scared to still fit physical buttons for key controls. You get a row of piano-style shortcuts below a small screen for the climate functions, but proper rocker switches for the temperature adjustment. There's a big dial on the centre console for the infotainment display, while the 'Crystal Sphere' revolving gear selector has been carried over from the old car.

Elsewhere, there are fresh upholstery designs and colours, plus a new wireless phone charger and digital rear-view mirror. We don't usually like these, but given that the rear window is split in two by the rear spoiler, we found it useful. Our only niggle is that it makes it feel like trailing traffic is bearing down on you, when in reality it's further away than it appears.

Quality, on the whole, is very good. If you look closely, the stitching on the doors and dash isn't as straight as it could be, but the general fit and finish is easily a match for Europe's premium marques – and arguably surpasses them in some areas.

There are a number of changes under the skin. The upgraded 'fourth-generation' battery sees capacity increase to 84kWh (80kWh usable), which in our Pure test model brings a 27-mile boost to its WLTP range. We averaged about 3.8mi/kWh, which should see a real-world return of more than 300 miles.

Being based on Hyundai's 800-volt electrical architecture – shared with the Ioniq 5 and Kia EV6

PRACTICALITY The 432-litre boot is a fair size and the rear seats fold nearly flat if you need extra luggage room. There's also a 'frunk' in the nose for storing charging cables

> "The Genesis GV60 has a strong chassis that resists roll, plus sharp steering and decent grip"

INTERIOR Electric front seats and a heated steering wheel are standard; coupé-SUV styling means there isn't as much rear space as in an SUV, but we didn't find headroom too much of an issue

– the GV60 can charge at up to 240kW. A 10 to 80 per cent top-up is still possible in 18 minutes, despite the increased battery capacity and usable range.

The revised GV60 doesn't feel all that different to drive than the car it replaces. It's particularly refined for a model in its class – especially on the Pure's 19-inch wheels – which, along with a relatively plush ride, a long range and fast charging, makes it a worthy motorway companion. It's stable at 70mph, with just enough power to make light work of overtakes.

If you need more power, you can step up to the dual-motor Sport model, which gets a near-100bhp boost to 314bhp, with torque swelling to 605Nm. We've not tried the Sport yet, but given the £4,400 premium, it could represent a sweet spot between the base car and the flagship Performance variant.

Even in its lowest trim and motor spec, the GV60 has a strong chassis that resists roll, plus sharp steering and decent grip. The traction control can hamper proceedings; we experienced a total loss of power pulling away from a gravel driveway onto a main road. Lifting off and reapplying the power overcame the issue. But we found the new Smart Regenerative Braking 3.0 system worked very well.

ESSENTIALS
Genesis GV60 Pure

Price: £54,115 **On sale:** Now
Powertrain: 84kWh battery, 1x e-motor
Power/torque: 226bhp/350Nm
Transmission: Single-speed automatic, rear-wheel drive
0-62/top speed: 7.8 seconds/115mph
Range: 348 miles
Max. charging: 240kW (10-80% in 18min)
Size (L/W/H): 4,545/1,890/1,580mm

AEX VERDICT ★★★★☆

THERE is really very little reason not to consider the Genesis GV60 alongside premium rivals such as the Audi Q4 e-tron and Volvo EC40. This mid-cycle update gives it a cleaner look, a gorgeous, user-friendly infotainment package, and even a smidge more range. It's competitively priced, and that 800-volt electrical architecture ensures it trumps every main rival for ultra-rapid charge times, too.

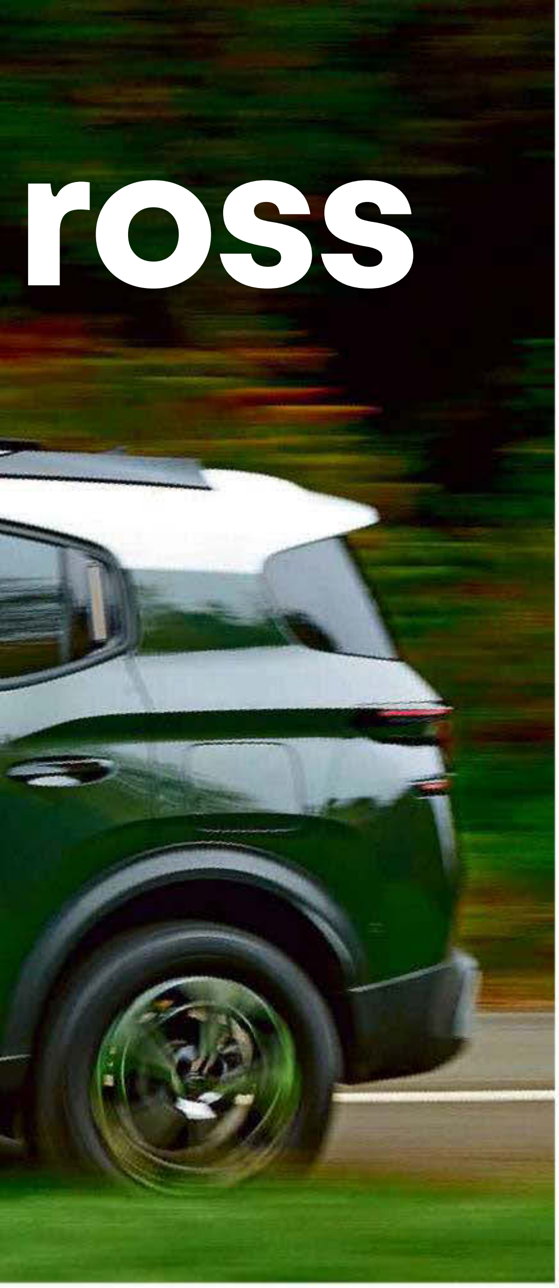
Citroen e-C3 Airc

FIRST UK DRIVE New C3 Aircross majors on things buyers really want, and is set to be a hit

ON THE ROAD
Relaxation is the name of the game – C3 Aircross is pretty slow, but comfortable on a longer journey

DETAILS
Dash is simple to understand at a glance, and there's good space for five plus luggage in the EV model, despite the higher floor needed to accommodate the battery

ross



Alex Ingram

Alex.Ingram@autoexpress.co.uk

CITROEN has taken a very different stance with this second-generation C3 Aircross. It's quite a brave choice, because, frankly, we thought the old model was rather good.

The new car is bigger, more practical and more varied under the bonnet, and it's an approach that seems to be working, because Citroen has already taken 3,000 pre-orders for the car.

It's only a couple of centimetres shorter than a Nissan Qashqai, but unlike the Qashqai, the C3 Aircross is available with seven seats. Yet there's a caveat – to get the third row, you'll need to choose from one of the petrol or hybrid engines available; the fully electric e-C3 Aircross is five-seat only.

Space has always been an Aircross signature, and here it's no different. Up front, that's aided by a dashboard design that's largely shared with its smaller C3 sibling; the two-layer fascia places climate controls (physical switches, thankfully!) beneath the central air vents, with all of the technology sitting above.

Moving further back, there's good space to stretch out, and there's still plenty of boot capacity; Citroen quotes a generous 460 litres. The seats fold almost flat, and sit level with the boot floor.

Wherever you find yourself in the cabin, those seats are very supportive. Citroen's Advanced Comfort design features a memory-foam layer on top of the standard seat cushions, providing a sumptuously soft feel that's great on long journeys. The EV model does enforce a slight compromise in practicality, however, because the floor has been raised slightly to accommodate the battery pack. This restricts foot space under the front seats.

Power and performance aren't high on the agenda. Under the skin, it shares its single motor with the e-C3 supermini, which produces a modest 111bhp and 125Nm of torque.

Moving off from a standstill is very smooth and serene, but there's not the urgency that you'll find with most other electric cars. That's reflected in the 0-62mph time of 11.7 seconds for the 44kWh Standard Range model we're driving here. The Extended Range, which weighs more due to its larger 54kWh battery, takes a leisurely 13 seconds to cover the same benchmark.

It's not a car to be rushed, then. The suspension follows the same ethos, prioritising comfort. The Aircross is very adept at absorbing bumps, but the ride isn't immaculate; on broken surfaces, there's a jittery feel that takes the shine off just a touch.

Much like the performance, the handling is a secondary thought. The steering is very light, which makes it easy to drive at low speeds, but it's a bit harder to read what's going on at the front axle.

ESSENTIALS

Citroen e-C3 Aircross Standard Range MAX

Price: £25,095 **On sale:** Now

Powertrain: 44kWh battery, 1x e-motor

Power/torque: 111bhp/125Nm

Transmission: Single-speed automatic, front-wheel drive

0-62/top speed: 11.7 seconds/89mph

Range: 188 miles

Max charging: 100kW (20-80% in 26min)

Size (L/W/H): 4,395/1,850/1,660mm

ON THE ROAD

Steering very light and a bit remote, but it certainly makes parking manoeuvres easy

Officially, the 44kWh model we drove is capable of 188 miles between charges. On our test route, which covered a wide spread of driving – but no motorway runs – we averaged 3.5 miles/kWh, suggesting a real-world range of 154 miles.

Temperatures were at roughly 15 degrees Celsius during our test, so expect that range to improve in the height of summer, but drop even more once temperatures fall closer to zero. The Extended Range model's extra 10kWh of energy results in the WLTP range increasing to 249 miles, so it will be the one to have for people who plan on taking longer trips more regularly. Both models charge at 100kW, which is respectable for this class of car.

There are two trims: Plus and Max, but the entry-level car has most of the kit buyers need. LED headlights, rear parking sensors with a reversing camera, lane-departure warning plus wireless Apple CarPlay and Android Auto are all standard.

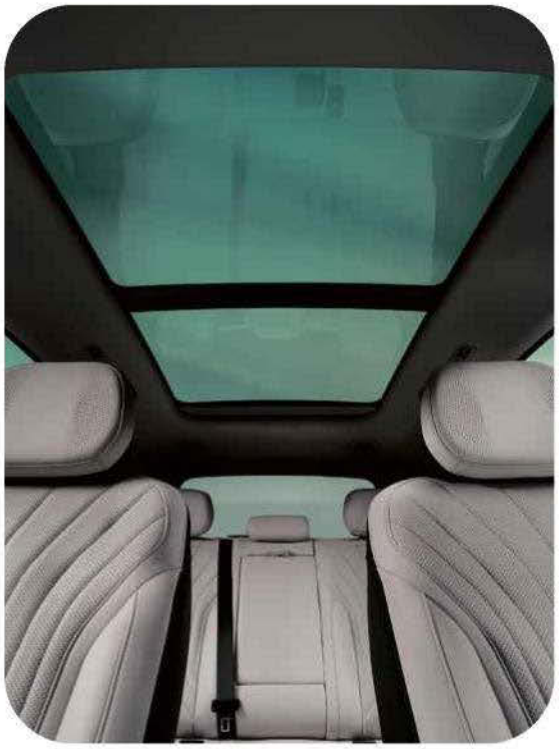
In Plus trim, the Standard Range model starts from £23,095 and the Extended Range £24,995, with Max models adding £2,000 to each. However, all of these currently benefit from the Government's EV grant, knocking £1,500 off.

VERDICT ★★★★½

THE new e-C3 Aircross is by no means perfect. Performance is leisurely, and the overall range will only be adequate for some. However, one look at the price makes these gripes easier to forgive. It's also big enough to tempt you away from larger C-segment SUV EVs. With decent kit and a mostly smooth ride, its appeal only increases.

WHO IS GEELY?

THE GLOBAL AUTOMOTIVE POWERHOUSE YOU'VE NEVER HEARD OF (UNTIL NOW)



DYNAMIC. ICONIC. ELECTRIC. REDEFINE YOUR JOURNEY WITH THE GEELY EX5

The landscape of global automotive power is shifting, and at its very heart is a name that is defining the next era of mobility. That name is Geely.

After decades of building a formidable foundation, Geely is now taking its place on the world stage as a global giant. In just over a quarter of a century, this Fortune Global 500 company has achieved what many legacy manufacturers can only dream of: establishing itself as a leader in innovation, design and engineering excellence. It's a company built on a single, powerful vision: to provide a better, more sustainable way to move around.

But Geely's story is more than just numbers; it's told in a family of brands that you already know and trust. The company that has secured the legacy of Volvo, powered the growth of Polestar, and transformed the iconic London black cab for an all-electric future has now arrived on its own terms - bringing a guarantee of engineering excellence.

It's a philosophy that goes beyond manufacturing cars; providing a complete ecosystem for the transport solutions of tomorrow. This forward-looking ethos drives success through strategic investments in technology and partnerships, building an integrated network of brands and services that are now helping to deliver a cleaner environment for us all.

At the core of this strategy is Geely's unyielding commitment to electrification and intelligent systems. With innovative brands like Zeekr already redefining what a premium electric vehicle can be, it's setting new benchmarks for performance and user experience.

Plus, its commercial vehicle division, Farizon, is leading the charge in clean logistics with more sustainable and efficient global supply chain management. These dedicated enterprises are a testament to Geely's leadership in a fast-moving industry, and its determination to deliver for a better, more responsible world.

Such holistic expertise is more than a business success story; it delivers tangible value for customers. The company's network of R&D and design centres includes hubs throughout the UK, and this local presence guarantees that every vehicle is meticulously developed with the modern driver in mind. From achieving the perfect chassis setup for winding country roads to the seamless technology required for navigating a congested city, every detail is engineered for your lifestyle.

Unrelenting focus on customer experience is what truly sets Geely apart. The company is committed to building robust retail, service and aftersales networks across the UK, ensuring that your car purchase is just the start of a long and trusted relationship. Geely's investment in aftercare and support is a powerful vote of confidence in its own products, and a promise of reliability and peace of mind for every customer.

This vision, aligned with such engineering and technical prowess has culminated in a dynamic SUV that is the perfect embodiment of the company's brand values: the Geely EX5.

Its striking exterior styling, a recipient of the prestigious Red Dot Award, is a clear statement of its world-class design and craftsmanship, while inside, the vehicle offers a premium level of fit and finish as standard - underlining Geely's commitment to delivering superior value.

A powerful, electric drive system provides smooth, refined performance, while a practical range and rapid charging ability offer the freedom to take on any journey.

The Geely EX5 is a definitive showcase of the company's pioneering spirit, marking its arrival on the UK stage with a product ready to lead the way. You've seen the power and ambition of the brand. Now, experience the future with the Geely EX5.

The journey starts here: configure your Geely EX5 today.

REMACY

KIA vs NISSAN vs

Top-10 British sales hits slug it out in our family SUV triple test

MID-life car updates can take many forms. Some makers like to go after buyers' hearts; sprinkling a little design magic inside and out to make an already appealing car just that little more fresh and modern.

A second approach is much rarer. From the outside, the car might look the same, but the brand instead decides to leave the updates to its engineers; tweaking an engine here, or revising the suspension set-up there.

Two of the biggest names in the current UK new-car landscape have taken these differing approaches for 2025. The Kia Sportage is the UK's second best-selling car, behind the Ford Puma, and held top spot in September. It has recently been given a hefty cosmetic makeover.

The Nissan Qashqai was facelifted in 2024, but for this year, the country's third best-selling car has a new hybrid powertrain that its manufacturer claims makes it the most efficient of its type in this segment.

To give these sales titans additional context, we've also brought along another of the UK's most popular cars. The Volkswagen Tiguan, all new last year, currently sits ninth in the best-sellers list – and with its space, powertrains and badge appeal, it isn't hard to see why.

CONTENDERS

Kia Sportage

THE fifth generation of Kia's family SUV isn't just a huge hit with UK buyers – the Sportage is the brand's most popular car in Europe, and globally too. Plenty would say that if it ain't broke, don't fix it, but that hasn't stopped Kia from freshening things up, courtesy of a subtly revised look inside and out, plus a tweaked trim structure, aiming to keep the Sportage challenging at the top of the sales charts. The model we're testing here is the mid-spec GT-Line trim with a hybrid powertrain – it costs £36,925.

HEAD TO HEAD

ON THE ROAD

LITTLE separates these three in terms of ride and handling. The Nissan's ride is narrowly the best, but all are relaxing, while keeping composure in corners. The Qashqai's powertrain also sets it apart; it has the smoothness, responsiveness and very nearly the refinement of a full EV. The Kia's electrical power is strong, but the gearbox can be clunky. The Tiguan's mild-hybrid tech feels a step down from the others.

TECH HIGHLIGHTS

WHETHER under the bonnet or from the driver's seat, the Qashqai feels the most hi-tech car here. Its hybrid powertrain is much more advanced than the Sportage or Tiguan's set-up, with electrical power playing a much greater part than in either rival. Nissan's Google-based infotainment is slick, loads quickly and looks great; VW's, displayed on a huge screen, is second. Kia's clunky set-up lags behind.

PRICE AND RUNNING

THE Qashqai's e-Power system is the most efficient powertrain here. We averaged 52.5mpg on test, comfortably beating the Sportage (43.8mpg) and the Tiguan (39.5mpg). Not only is the VW set-up the thirstiest in the real world, it's also quite expensive to buy – especially if you dive into the list of options. Show some restraint with those extras, however, and it's the car that's most resistant to depreciation of this trio.

VOLKSWAGEN

Nissan Qashqai

NISSAN can claim to have invented the family SUV segment with the Qashqai, and it's a formula that it has continued to refine in the almost 20 years since. In 2025, the third-generation car's improvements focus on technical upgrades, with an overhaul of the e-Power hybrid technology aiming to boost performance, efficiency and refinement. The new system costs almost exactly the same as the outgoing set-up; it starts from £34,860, while our range-topping Tekna+ test car costs £43,210.

Volkswagen Tiguan

WE'RE testing the Volkswagen Tiguan in range-topping R-Line trim, and unlike its rivals here, it has a mild-hybrid powertrain, so there's less electrical assistance to work with the petrol engine. It's priced from £42,135 on the road, but the car in these pictures featured an additional £9,070 of optional extras, including the Comfort Pack (£1,170), a panoramic sunroof (£1,415) and an electrically folding towbar with Trailer Assist (£1,125). Those features, and others, take the total price to £51,205.

> "THE KIA SPORTAGE IS THE UK'S SECOND BEST-SELLING CAR, BEHIND ONLY THE FORD PUMA, AND HELD TOP SPOT IN SEPTEMBER. IT HAS RECENTLY BEEN GIVEN A HEFTY COSMETIC MAKEOVER"

PRACTICALITY

WHEN it comes to interior space, the Tiguan is the one to have of this trio. Its cabin measurements are nearly identical to the Sportage's, but its real advantage comes with its vast 652-litre boot. The Kia's load bay is still impressive, at 587 litres, and it has the lowest load lip here, while rear passengers get reclining seat backs. The Qashqai's 479-litre boot is still generous, but is the smallest of the three.

SAFETY

ALL three cars bagged a five-star rating from Euro NCAP when they were assessed, but the VW achieved that score against higher standards, given NCAP's ever more stringent test procedures. Self-steering tech that can ease the strain of longer journeys is standard on all Sportage trims, while it's a £1,000 extra on the Volkswagen. For the Nissan, it's standard on all but the entry-level Acenta Premium.

OWNERSHIP

IN our 2025 Driver Power customer satisfaction survey, Nissan finished 15th out of 31 manufacturers, beating both Kia (18th) and VW (27th). As ever, Kia presents the lure of a seven-year, 100,000-mile warranty, though – the other two cars only get three years' cover. The Qashqai is the only model here to get three years' breakdown cover; the other two come with a 12-month package.

KIA can seemingly do no wrong with the Sportage. The model flies out of the showrooms at very nearly the same rate as the Ford Puma, despite that car being both much smaller and costing less to buy.

Still, Kia clearly sees room for improvement, because the range gets a new look for 2025, with a face that's inspired by the likes of its EV9 electric SUV. The brand has introduced a new lighting signature at the front, which makes the car look wider and more imposing, while new wheel designs, measuring between 17 and 19 inches, freshen up the profile.

None of these changes have really altered the fundamentals, however, and that's a good thing, because the Sportage is a really solid all-rounder that is spacious, well equipped and offers strong value for money. The powertrains aren't quite up with the very best in the class, but otherwise it's a great package.

ENGINES & PERFORMANCE 4.1/5★

KIA offers a choice of electrified powertrains; mild-hybrids sit at the bottom and full hybrids are positioned above them, with plug-in hybrids due to join the range at a later date.

All versions use a 1.6-litre turbocharged four-cylinder petrol engine. The entry-level mild-hybrid version produces 147bhp and is paired with either a six-speed manual gearbox or a seven-speed dual-clutch auto.

Despite the slight electrical assistance, the petrol engine needs to be worked hard, and accelerating causes it to emit a gruff, almost diesel-like tone. Overtaking can be quite a steady and noisy process, with a second or two's delay before the car starts to steadily gain speed, despite a significant increase in engine volume.

Hybrid versions still make a gruff noise, but the electric motor is fairly strong, so that unpleasantness doesn't crop up so often. In total, there's 235bhp and 265Nm of torque on offer, so it feels really quite lively for this class.

The generous oomph from the electric motor is immediately obvious because the Sportage hybrid feels more enthusiastic when setting off. The engine chimes in less often around town, too, boosting refinement and reducing fuel consumption. Compared with the class-leading Nissan and Toyota hybrids, there are a few too many jolts in the Korean machine's powertrain – most notably when shifting gear (even in EV mode) and when the engine switches on and off.

DRIVING 3.8/5★

THE Sportage has never been about class-leading dynamics, but that's not a dealbreaker in this segment. What it can offer is a solid all-round mix of secure handling and reasonable overall comfort.

AROUND TOWN The Kia's suspension doesn't quite feel like it offers the same level of sophistication as rivals such as the Nissan Qashqai. While the overall response is quite soft, there's a level of fidget that makes it through to the cabin, which means that it's a little less settled at low speeds and across harsher bumps than some alternatives.

A & B-ROADS While there's a little more fidget around town than in a Nissan Qashqai, that soft set-up means that it doesn't really translate into a more agile response through corners, and over larger bumps the body can take a little longer to regain its composure.

When turning into a corner, the initial response is more languid than in a Nissan Qashqai, a Volkswagen Tiguan or a Vauxhall Grandland, and the steering, although naturally weighted, doesn't feel as precise as the Nissan's.

MOTORWAY At higher speeds, the Kia's ride settles down, and it proves to be a relaxing, comfortable companion. Stability isn't quite at the Tiguan's unflappable levels, but it all feels solid and reassuring.

MPG & RUNNING COSTS 4.3/5★

THE Kia's powertrain line-up isn't the most efficient in the class, with full-hybrid rivals such as the Qashqai and Honda ZR-V having superior fuel economy. During our test, which took place in temperatures of around 15 degrees Celsius, we averaged a shade under 44mpg on a wide mix of roads in the Sportage. Given the performance on offer, we still consider that a reasonable return.

TAX If you're a private buyer, the GT-Line hybrid is the Sportage model we'd go for – not least because of the Vehicle Excise Duty (VED) saving relative to the GT-Line S range-topper. The S costs more than £40,000, so is subject to the 'luxury car' tax levy, taking the total annual cost from £195 to £620 from years two to six. Given that the GT Line version sits well below the £40,000 mark, it avoids that road tax premium, saving buyers £2,125 over five years.

INSURANCE The mild-hybrid manual Sportage starts at group 19 insurance in both Pure and GT Line trims, while the automatic version sits in group 20 for the GT Line, and 22 for the GT Line S. Full-hybrid models with front-wheel drive range from group 23 to 25 according to trim level, while the range-topping all-wheel-drive hybrid is in group 26.

That means that the base models are, based on those groups, more expensive to insure than entry-level Qashqais, but the top-spec

KIA SP

Korean brand isn't resting on its

MODEL TESTED:

Sportage HEV GT-Line 1.6 T-GDi

PROS	**CONS**
Spacious cabin and large boot	Petrol engine sounds rough when pushed
Powerful hybrid system	Hybrid fuel economy trails class best
Strong motorway refinement	Infotainment feels a little old hat

TESTER'S NOTES

KIA'S latest hybrid powertrain comes with adjustable regenerative braking, and the paddles behind the wheel allow the driver to adjust the strength of its response on the fly. We really like this level of flexibility, making the car very easy to control on inclines and when slowing down generally. In its weakest setting, the Kia in effect coasts without motor regen; the strongest two of the four deceleration modes engage the brake lights when you lift off the accelerator. Level one regen feels closest to a standard petrol car's engine braking.

Chief reviewer

ORTAGE

laurels with its most popular model

FEATURES
Design tweaks (below, left) ape Kia's electric cars; alloy wheels (below) range between 17 and 19 inches; boot capacity (below, right) is 587 litres or 1,776 with the rear seats folded

> **"THE SPORTAGE HAS NEVER BEEN ABOUT CLASS-LEADING DYNAMICS, BUT THAT'S NOT A DEALBREAKER"**

hybrids should be cheaper than their equivalents in Nissan's line-up.

DEPRECIATION The Sportage is pretty much inseparably tied with its closest rival, the Qashqai, for depreciation. Depending on the powertrain and trim level, the Kia holds onto between 47 and 49 per cent of its original asking price after three years or 36,000 miles.

Those figures do put the Sportage's residual values behind both the Tiguan and the Kia's competitor from sister brand Hyundai, the Tucson, though.

INTERIOR & TECHNOLOGY 4.0/5★

THE Sportage's cabin is smart and functional, if not quite a class leader in terms of ergonomics or the quality of its materials.

DESIGN For 2025, Kia has smartened up the Sportage's interior. Taking inspiration from rangemates such as the EV6, the air vents have been consolidated into a single, slim span that runs across the width of the dash, below which sits a dual-function panel; the mix of physical dials and touch-sensitive buttons can be used to adjust either the infotainment or climate functions, depending on its mode. It's quite easy to use, but we'd like it more if the way to change between those functions was a larger, physical button.

There's a new steering wheel design – the gently squared-off shape is nice to hold, and features a large driving mode switch beneath the left spoke – while the switches on the centre console are neater than before, too.

QUALITY It's hard to complain about the actual fit of the Sportage's interior panels, but compared with rivals such as the Tiguan and Peugeot 3008, there are a few too many hard and scratchy plastics close to areas and buttons that most commonly get touched. The door trim is one example.

TECH AND INFOTAINMENT As we've come to expect from Kia, standard tech is far from measly – even on the entry-level models in the range. For 2025, that base trim has been renamed Pure, but it still gets wireless Apple CarPlay and Android Auto, plus front and rear parking sensors and a reversing camera all fitted as standard equipment.

The GT-Line S trim adds a 12.3-inch digital driver's display, while other models get a large LED-style readout for the road and engine speeds either side of 4.2-inch digital screen.

The infotainment set-up itself has been an area where Kia has earned praise in the past, but its systems are starting to fall behind the class best. The graphics are merely okay rather than outstanding, but the main criticism falls on some of the sub-menus, which can feel rather convoluted to use.

While disabling a speed-limit warning system is a matter of two button presses in a Qashqai or Renault Austral, here the process involves scrolling through the digital driver's display in order to open up a sub-menu on the main touchscreen. The process still isn't done then, because you need to dive into another sub-menu to adjust the warning tech from there – and another if you feel the need to adjust the settings of the lane-keep assist, too.

PRACTICALITY 4.5/5★

THERE'S an impressive amount of space available for both passengers and their luggage, making the Sportage one of the most practical cars in its class.

FRONT SPACE The Kia offers plenty of room up front, as you'd expect from a family SUV, and fans of a high-set driving position will appreciate it, because it feels like you sit much higher than in the almost car-like Qashqai.

REAR SPACE Anyone in the back will appreciate that there's enough space for three adult passengers. Against the tape measure, the Kia is a very close match for the Tiguan (marginally beating it in some areas and narrowly falling behind in others), while it offers more space than the Qashqai, Mazda CX-5 and SEAT Ateca, among others.

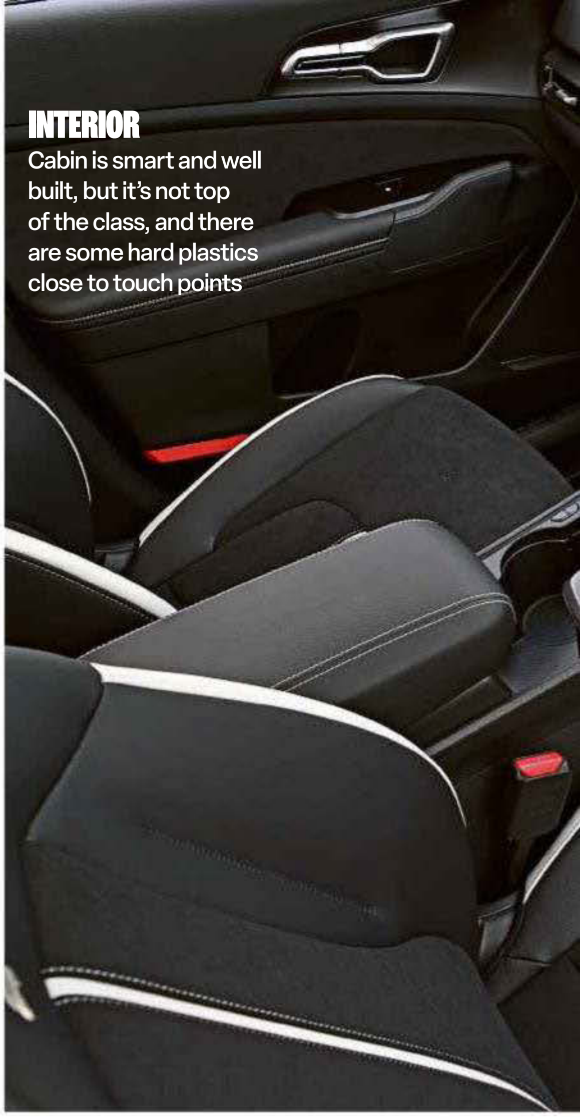
We like that the Sportage's rear seats can be reclined by pulling a lever, and all versions get a fold-down centre armrest with cup-holders. These features increase comfort levels for those in the back during a long journey.

Two Isofix child seat mounting points are provided on the outer rear seats. The central seatbelt in the back is a complicated arrangement that comes from the roof, which not only requires you to ensure you're using the correct seatbelt buckles, but also impacts the driver's rear visibility, and some might find that the belt rubs their neck on long trips.

BOOT SPACE The full-hybrid versions of the Sportage lose a barely noticeable four litres of boot capacity compared with the petrol mild-hybrid alternatives, but the 587 litres on offer is still very generous. The load lip is among the lowest in the class, which makes it easier to lift heavier items on board than in much of the competition. Drop each section of the 40:20:40-split rear seats, and you can cram up to 1,776 litres worth of kit into it.

RELIABILITY & SAFETY 3.9/5★

KIA has previously ranked highly in our customer satisfaction surveys, but for the last couple of years, it has found itself hovering



INTERIOR
Cabin is smart and well built, but it's not top of the class, and there are some hard plastics close to touch points

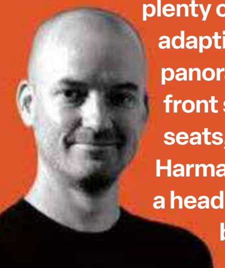
REAR SEATS

Space in the back is broadly on par with the Tiguan and ahead of the Qashqai, with some nice touches, including the reclining back rests

TESTER'S NOTES

KIA isn't a manufacturer that goes in for optional extras very much, and that's reflected in the Sportage's trim line-up. If you want more kit, then you'll need to step up the range from the base Pure model to the GT-Line and GT-Line S variants.

The latter is a big step up in cost, but adds plenty of extra tech, including adaptive LED headlights, a panoramic sunroof, ventilated front seats and heated rear seats, a powered tailgate, a Harman Kardon sound system, a head-up driver's display, blind-spot detection and much more.



Alex Ingram
Chief reviewer

DETAILS

Infotainment (above, left) is beginning to lag behind rival set-ups; drive selector (above, centre) is conveniently placed on the centre console; there's plenty of space up front (above), with a high-set driving position, too

> "ANYONE IN THE BACK WILL APPRECIATE THAT THERE'S ENOUGH SPACE FOR THREE ADULT PASSENGERS"

around the lower half of the manufacturer rankings. In 2025, the 18th-place finish out of 31 puts it ahead of rivals such as Hyundai, Ford, Seat and Volkswagen, but behind Vauxhall, Peugeot, Renault and Nissan.

WARRANTY 4.5/5★

LONG warranties are a Kia trademark, and the Sportage has the brand's seven-year, 100,000-mile warranty. But the single year of breakdown cover is less than with some rivals.

SERVICING 4.5/5★

AS with many rivals, Kia offers buyers the option of buying a service plan up front, delivering scheduled maintenance that's protected from the potential of inflation in the future. Kia's plan is currently cheaper than the equivalent Qashqai package.

IN its current form, the Nissan Qashqai has been with us since 2021, with the SUV getting a mid-life update in 2024. But it only feels that now in 2025 it has finally peaked, thanks to the latest edition of the brand's e-Power hybrid powertrain. In a model that ticks so many of the boxes for the family-car buyer, the powertrain was one of the few areas where it was lacking compared with the competition; with this update it now ranks among the very best in the segment.

Even before the introduction of that powertrain, age has done little to dent its popularity, because the Qashqai regularly ranks among the top three or four sellers in the UK. On top of that new powertrain, the 2024 facelift added to the appeal with sharper looks, much-improved in-car tech and a higher-quality feel in the cabin.

ENGINES & PERFORMANCE 4.4/5★

AT the base of the Qashqai line-up is a mild-hybrid powertrain, mixing a 1.3-litre turbocharged petrol engine with a small electric motor. It's available with a choice of 138bhp (with a manual gearbox) or 156bhp (with an auto) versions, and offers the more affordable route into Qashqai ownership, with decent refinement and performance.

Key to the 2025 update is the introduction of a new e-Power hybrid. Think of Nissan's hybrid tech as an electric car that uses a petrol engine to provide energy rather than a big battery; the 1.6-litre, three-cylinder unit never drives the front wheels directly – instead it sends its energy to an electric motor, which rotates the wheels. In its latest edition, this engine has been optimised for its generator role, with improved intake flow thanks to cold-sprayed valve-seat coatings, making the engine's 42 per cent thermal efficiency among the best ratings of any production internal-combustion engine.

The electric element has been improved, too. It borrows much of its electrical tech – including the motor and inverter – from the latest Nissan Leaf, and houses all of the important hardware in a single "five-in-one" unit. Nissan says that by grouping these elements together, it has produced a stiffer, lighter unit, which helps to reduce noise, improve refinement, and boost efficiency compared with the previous-gen e-Power.

At 201bhp, overall power is up 13bhp on the previous e-Power hybrid, but this figure can only be accessed in Sport mode – Standard and Eco offer the same 188bhp as before. Maximum torque is also the same, at 330Nm.

The overall result is very impressive. Like before, the e-Power behaves more like an EV than a petrol car, with smooth, responsive and lively acceleration making it very easy to drive in all conditions. What is more impressive, though, is the boost in refinement – a previous downside of the tech. Nissan claims the average noise when accelerating from 50-75mph has dropped by 5.6 decibels, but in reality the new set-up is quieter throughout almost the entire rev range. In many situations, you barely notice the engine switching on and off at all. It's much more refined and responsive, than hybrid rivals from Renault, Kia, Hyundai and the Stellantis group, and is more than a match for Toyota's best hybrid technology.

DRIVING 4.2/5★

THE Qashqai has always been a comfortable, composed and competent drive. Now equipped with its latest hybrid powertrain, it's a stronger all-round package than ever.

AROUND TOWN Light steering and a fairly tight turning circle make Nissan's biggest seller an easy car to shuffle around while parking or manoeuvring out of tight spots. Once on the move, its noise isolation is great, although higher-spec models, riding on larger wheels, can add a little low-speed fidget to what is otherwise a fairly smooth ride.

A & B-ROADS For most buyers, the Qashqai is merely a car from getting from A to B in a relaxing and safe manner, and in that respect, it's very hard to fault. The suspension is well judged, delivering enough comfort on bumpy roads, while managing to keep body roll fairly well in check when pushing on.

There's not much feel to the steering, but the Qashqai seems a little lighter over the nose than some rivals, which means that it's quite responsive when making quick direction changes, or swerving to avoid hazards. The steering doesn't have much feedback either, although drivers can opt for Sport mode if they prefer the reassurance of a little more weight through the wheel when turning.

The top-spec Tekna+ model gets a more advanced multi-link suspension layout, but for the most part, the difference between it and the base set-up isn't that obvious when it comes to ride and handling.

MOTORWAY The Qashqai driving experience remains as solid on motorways as it does on slower roads. High-speed comfort and refinement are both great, with a little less of the Qashqai's road noise reaching the cabin compared with rivals such as the Kia Sportage.

MPG & RUNNING COSTS 4.5/5★

AS well as a boost in refinement, the third-generation e-Power tech has improved the Qashqai's efficiency. Nissan claims a 15 per cent uplift in fuel economy, taking the official

Revised hybrid powertrain is the

ON THE ROAD
Revised e-Power hybrid set-up makes the latest Qashqai an even more tempting option for those looking for a comfy, composed and competent family SUV

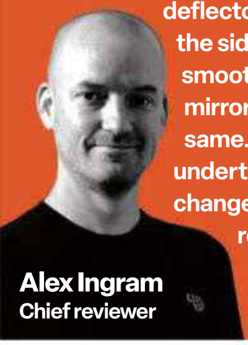
MODEL TESTED:
Qashqai e-Power N-Connecta

PROS	CONS
Brilliant third-gen e-Power hybrid	Some low-speed fidget on big wheels
Smooth ride and strong refinement	Boot isn't as large as its rivals'
Google tech is impressive	Top-spec Tekna+ is a bit pricey

TESTER'S NOTE

IT isn't just the casual observer who'd be hard pushed to spot the Qashqai's exterior design tweaks; I had a hard job until they were pointed out. But that's because they're not about changing the car's aesthetics, but boosting its aerodynamic efficiency.

The front bumpers get new wind deflectors to channel air around the sides of the Nissan more smoothly, while revised door mirrors also aim to achieve the same. Combined with a larger undertray beneath the car, the changes add up to a 1g/km reduction in CO_2 emissions.



Alex Ingram
Chief reviewer

QASHQAI

cherry on the cake for British-built SUV

> **"WITH THIS POWERTRAIN UPDATE, THE QASHQAI NOW RANKS AMONG THE VERY BEST CARS IN THE SEGMENT"**

WLTP figure to as much as 62.8mpg, depending on trim level, while CO_2 levels are also down 12 per cent. A large focus has been placed on improving efficiency at motorway speeds, too.

We found these claims to stand up very well in the real world; during our time behind the wheel, we achieved around 53mpg, which puts it around 9mpg clear of the Sportage hybrid we tested in the same conditions.

TAX While Benefit-in-Kind (BiK) rates will see most company-car users gravitate towards full EVs and long-range plug-in hybrids, the Qashqai's emissions drop has seen it fall from the 29 per cent BiK band to 26 per cent, which makes it more affordable to run.

INSURANCE Mild-hybrid models sit in group 12 insurance, but the e-Power hybrid is above the class average, ranking as high as group 30.

DEPRECIATION Depending on trim level and powertrain, the Qashqai holds from just under 47 per cent to just under 50 per cent of its original value after three years or 36,000 miles.

INTERIOR & TECHNOLOGY 4.2/5★

IT'S not the most inspiring cabin to look at, but the Qashqai's dash is logically laid out, finished well and has significantly better tech than when the Mk3 model was launched.

DESIGN Excellent ergonomics make the interior very easy to live with. It starts with one of our favourite things to see in any new car: big, simple physical air-con controls. They're all aligned on a single panel, which makes them very easy to understand and even work on the move purely by feel.

QUALITY Look beyond that quite staid dash design, and the British-built Qashqai feels finished to a fairly high standard. It's not got the glamour of a Peugeot 3008, but changes to the materials in the 2024 facelift make it very hard to grumble with the perceived quality of all the parts that you'll touch most often.

TECH AND INFOTAINMENT All Qashqais have a digital instrument panel. It's not the sharpest to look at in the class, but much like the rest of the cabin, it's functional and clearly laid out. Chunky steering wheel controls let the driver access the intuitive system easily on the move.

PRACTICALITY 4.3/5★

A well designed family car filled with sensible touches, the Qashqai is a practical SUV, even if some rivals are even more spacious.

FRONT SPACE It's clear that the Qashqai's cabin has been well thought out. There's loads of adjustment available in the steering wheel and the driver's seat (on top-spec models the latter gets electrical adjustment, including a function that moves the seat back to make access easier) and the seat, steering wheel and pedals are nicely aligned with one another. Storage options are generous, with a large shelf for storing a smartphone, a pair of cup-holders, plus deep and wide door pockets.

REAR SPACE The back doors open to 85 degrees, making it easy to wiggle a child seat into position (helped further by Isofix points enclosed behind plastic covers), or for kids to climb on board themselves. Once there, overall space is fine. It's not outstanding – the Kia Sportage offers more headroom and a little more under-thigh support for the cash – but few occupants will have complaints.

BOOT SPACE Depending on trim, the Nissan has a boot volume of up to 504 litres, although models fitted with the boot divider – which allows for a completely flat floor when the back seats are folded – see that figure fall to 479 litres. It's a capacity that will be plenty for most family-car buyers, but one that puts it behind rivals, including the Dacia Bigster, Hyundai Tucson or Sportage. But it's worth noting that the Nissan is physically smaller than all three of those cars, which means that it takes up less space on the road, so the lower storage capacity isn't too surprising.

We have measured the Qashqai's boot lip height at 756mm – slightly higher than the Sportage's and the fully electric Skoda Elroq's, but largely similar to other family SUVs. With the rear bench folded, the overall volume once again falls behind its rivals; there's 1,415 litres available compared with the roughly 1,800 litres you get in a Sportage or a Tucson.

RELIABILITY & SAFETY 4.0/5★

THE Qashqai finished in 28th out of the 50 cars surveyed in the 2025 Driver Power customer satisfaction survey. This places it ahead of the Sportage (45th) and Toyota RAV4 (31st), although it fails to trouble the Vauxhall Grandland (2nd), Ford Kuga (4th), Citroen C5 Aircross (8th) and Hyundai Tucson (13th).

It's similar news for the Nissan brand, which was 15th (out of 31) in our 2025 Driver Power manufacturer ratings. The company did well for child-friendly features, but was criticised for its cars' overall quality and road handling.

Family buyers will be impressed by the Qashqai's five-star safety rating from industry body Euro NCAP, though. When it was tested in 2021, both adult and child-occupant safety were rated at 91 per cent, with Safety Assist systems scoring an outstanding 95 per cent.

INTERIOR
Qashqai's cabin is well built with logical ergonomics, including physical controls for the air-conditioning

REAR SEATS

Wide-opening doors make getting into the back easy, and there is lots of space when you're seated, although the Kia is roomier still

TESTER'S NOTE

NEW cars are mandated to feature certain driver-assist systems that switch on every time the vehicle is started, so if these annoy you, then you must turn them off each time.

Fortunately, Nissan makes this easy to do. Similar in principle to Renault's approach, it's possible to program your preferred driver-assist arrangement in the infotainment menu, and then access this via two button presses on the steering wheel when the car starts. In other words, it's much easier to switch the tech off than in rivals from Kia and Volkswagen.

Alex Ingram
Chief reviewer

FEATURES

Infotainment (above, left) doesn't have the highest resolution but is easy to use; drive selector (above, middle) is handily located on the centre console; there's lots of adjustment for the driver's seat and steering wheel (above)

> **"A WELL DESIGNED FAMILY CAR FILLED WITH SENSIBLE TOUCHES, THE QASHQAI IS A PRACTICAL SUV"**

WARRANTY 4.0/5★

NISSAN'S three-year warranty falls behind its key rivals from Kia and Hyundai, but the Qashqai returns fire with a three-year breakdown package, two years more than the Korean duo can offer.

SERVICING 4.0/5★

NISSAN offers a competitive service plan across its range. Prices vary slightly depending on powertrain, but petrol and hybrid models cost the same, although the three-year package is still a little more expensive than the equivalent deal from Kia. However, the revised Qashqai gets extended service intervals – increased to 12,000 miles from the previous 9,000 miles for its predecessor – which should help reduce the number of trips to the dealer.

VOLKSWAGEN has adopted a softer, less angular shape for its latest Tiguan, but like its sharper-suited predecessor, the rest of the overall package is just as well rounded. Practicality is one of the third-generation model's biggest plus-points – it really is vast inside and in the boot – but the driving experience is spot on, too.

Most reassuringly, the interior quality and ergonomics are getting closer to the standards that we expect from VW. That's important, given that the price reflects the brand's perception as a more premium offering than much its competition.

ENGINES & PERFORMANCE 4.3/5★

IF there's one thing that's never lacking in a Volkswagen, it's choice. Whether it's the fact that there are five trim levels to choose from, or the lengthy options list, buyers can select almost any combination of spec that they want. This choice extends to the engines, too, with petrol, mild and plug-in hybrid powertrains sitting alongside diesel options.

The range kicks off with a 1.5-litre turbocharged petrol engine with mild-hybrid tech. It's available in two power outputs – either 128bhp and 220Nm, or 148bhp and 250Nm – and in both cases is combined with a seven-speed dual-clutch automatic gearbox.

Further up the petrol range, there is a pair of 2.0-litre options available; one produces 201bhp, while the other unit is borrowed from the Golf GTI hot hatch, offering up 261bhp. Both versions have four-wheel drive.

Diesel power comes in the form of a 2.0-litre turbocharged engine with 148bhp and backed up with a healthy 360Nm of torque.

Finally, the plug-in hybrids are available in two outputs; combining a petrol engine with an electric motor, they produce either 201bhp or 268bhp.

For the vast majority of buyers, the 1.5-litre petrol and the diesel model will offer the best balance between price and performance. The petrol engine makes strong use of the mild-hybrid tech, cutting in and out of operation very smoothly when shuffling around town.

The gearbox responds quickly when using the paddles behind the steering wheel, and operates without fuss in automatic mode. Officially, the 1.5-litre petrol model will cover the benchmark 0-62mph dash in a reasonable, if not outstanding, 9.1 seconds. When pushed hard, it makes less fuss than the turbocharged options in the Kia Sportage and Hyundai Tucson.

DRIVING 4.3/5★

WHILE it's not going to put a big grin on your face when you're driving on a twisty road, the Tiguan is nevertheless one of the most competent vehicles in its segment in terms of its chassis set-up.

AROUND TOWN Light, precise steering and a surprising feeling of agility mean that the Tiguan rarely feels like a bulky SUV on the road. The high driving position gives a great view out, which really helps when driving at low speeds. Overall refinement is very good, with only one minor exception. At lower speeds, the noise from the suspension as it knocks over larger drain covers and potholes is more noticeable than it is in some rivals.

A & B-ROADS Handling is neat and composed, thanks in part to Volkswagen's Vehicle Dynamics Manager, which can nip the brakes of individual wheels to help stabilise or tighten a car's line when tracking through a corner. Body roll is fairly well contained, too, while the overall ride comfort is better than in rivals from Peugeot, Hyundai and Kia, and similar to that of the Nissan Qashqai.

MOTORWAY High-speed stability is one of the Tiguan's biggest strengths, although there's an ever-present busyness to the ride on cars without the adaptive dampers – and especially those with larger wheel options.

MPG & RUNNING COSTS 3.7/5★

FROM the driving point of view, everything has been looking rosy for the Tiguan, but it's when it comes down to value for money that the Tiguan's stumbling blocks arrive.

For similar cash to a mid-spec Kia Sportage or Nissan Qashqai with a full-hybrid powertrain, the Tiguan is available with that 1.5-litre turbocharged mild-hybrid engine and in the more lowly Match trim. In order to bring equipment levels on a par with the Sportage and Qashqai, you'll need to dip into the options list – at which point you'll be comfortably breaching the £40,000 mark.

Still, this is an approach that is working for Volkswagen – the strong sales figures are very clear proof of that – but look beyond the badge and it doesn't quite feel like it's offering the same value for money as the competition.

That feeling is compounded by the fact those similarly priced hybrids will cost less to run, too. We averaged 39.5mpg in the Tiguan eTSI mild-hybrid, while in the same conditions the Nissan Qashqai e-Power was returning almost 53mpg. Based on a fuel price of 135.8p a litre, that works out at an extra £387 over the course of 10,000 miles.

TAX Most of the Tiguan's rivals sit on the right side of the £40,000 mark, largely dodging the levy on Vehicle Excise Duty that is added to cars that sit above that threshold. Only the

VOLKSW

Practical VW is a well rounded, b

ON THE ROAD

The Tiguan is competent and surprisingly agile for an SUV. It's ride comfort beats the Sportage's and is a match for the Qashqai's

MODEL TESTED:

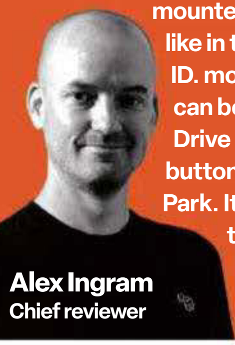
VW Tiguan Match 1.5 eTSI

PROS	CONS
Impressive refinement	High prices and expensive options
Superb practicality	Driver Power scores
Strong residual values	Fidgety ride

TESTER'S NOTE

FRONT storage space is very impressive in the Tiguan, with two smartphone slots (both of which offer wireless charging in many models) plus a deep cubby space with moveable partitions for holding drinks.

This large central space has been made possible in part due to the steering column-mounted gear selector. Much like in the brand's all-electric ID. models, the Tiguan's stalk can be twisted to select either Drive or Reverse, while a button on the end engages Park. It doesn't take long for this set-up to feel very intuitive.



Alex Ingram
Chief reviewer

VAGEN TIGUAN

ut pricey option for those looking for a new family SUV

> "INTERIOR QUALITY AND ERGONOMICS ARE GETTING CLOSER TO THE STANDARDS THAT WE EXPECT FROM VW"

sparsely equipped Life and the next step up, the Match, dip below the £40k limit, but even then you'll need to be careful with optional extras – even exterior colours – to avoid the £425 VED add-on.

INSURANCE Depending on trim and engine choice, the Tiguan's insurance groups vary from 15 in the base mild hybrid up to 32 for the 265 4Motion.

DEPRECIATION While it costs more to buy initially, the Tiguan does a solid job of holding onto that value. In our pick of the range, the Match eTSI 150, it's expected to retain just over 53 per cent of its original price after three years or 36,000 miles, which is among the best figures in the class.

Plug-in hybrid models are even more resistant to depreciation, with official calculations by experts CDL stating that they will hold onto between 57 and 58 per cent of their value over the same time.

INTERIOR & TECHNOLOGY 4.1/5★

VOLKSWAGEN had a bit of a wobble around 2020 in terms of its interior design and quality. While it hasn't quite fully got its mojo back when it comes to the flawless ergonomics of its earlier cars, the Tiguan's build quality is getting back to the brand's best work.

DESIGN Previously, VW stood out from the crowd with its neatly designed, beautifully damped switchgear, but that's much harder to do when so much is now confined to a touchscreen. Still, the layout is neat and logical, but climate controls are restricted to the 12.9-inch (or optional 15-inch) display. A multifunction rotary dial sits beside the start button and parking brake on the centre console; this can adjust the audio volume and switch between drive modes.

QUALITY All of the main touchpoints are made from soft materials, while the likes of carpeted door bins add a little clue that Volkswagen has put a little extra effort into the car's fit and finish compared with many of its big-selling competitors.

The door pulls feel solid, the vents are slick to adjust manually, and proper buttons can be found on the steering wheel, in place of the fiddly touch-sensitive keys that VW dabbled with on the likes of the Mk8 Golf and ID.3.

TECH AND INFOTAINMENT Volkswagen has refined its touchscreen tech over the past few years, and it's resulted in a set-up that largely impresses overall. A bank of shortcut keys along the top of the screen provide easy access to drive modes and driver-assist functions, while the home screen offers widgets of various sizes for the navigation, media and general shortcuts.

The climate controls are touchscreen only, though, and adjusting the fan speed or direction requires a sub-menu to be opened up, which is a little annoying. On the plus side, the display's graphics are sharp and the colours are bright and bold.

PRACTICALITY 4.6/5★

THE Tiguan is among the most spacious cars in its class for passenger and boot space.

FRONT SPACE Adjustment of the driving position is as good as it gets in this class, with plenty of range for moving both the seat itself and the steering wheel. R Line models get a set of sporty-looking seats with a fixed headrest; they're superbly comfortable and hold the front occupants in place without squeezing them unnecessarily tightly.

Unlike either the Sportage or the Qashqai, the Tiguan offers an Isofix mounting point on the front passenger seat, meaning that families can securely fit their child seat in one of three seats inside the Volkswagen, instead of just two as in its rivals.

REAR SPACE Passengers are well catered for in the back of the Tiguan. Knee room is slightly ahead of that in the already spacious Sportage, and it's made even better by the fact that there's loads of foot space available between the front seats.

Compared with the Kia, the hump in the middle of the floor is a little larger, but the centre seat itself is a touch softer, and therefore more comfortable to sit on.

BOOT SPACE Few rivals can compete with the Tiguan's boot space; there's a superb 652 litres on offer with the rear seats in place. The load space is deep, while models fitted with a false floor can create a near-level load area from the load lip right through to the rear-seat backs once they're folded down. Thanks to levers in the boot, dropping the back seats out of the way is very easy, too.

RELIABILITY & SAFETY 4.0/5★

THE Tiguan bagged a very impressive score in the 2024 round of Euro NCAP safety tests on its way to a maximum five-star rating. It was particularly strong in the vulnerable road users category; only the Toyota C-HR and a pair of Subarus narrowly beat its score of 84 per cent. Every model gets adaptive cruise control, parking sensors all round and a reversing camera as standard.

Volkswagen's performance in our 2025 Driver Power customer satisfaction survey

INTERIOR
Cabin quality is closer to the standards that we have come to expect from VW, and there are lots of soft-touch materials used

REAR SEATS
Passengers get a little more space than in the Sportage, while the middle seat also beats the Kia's in terms of comfort

TESTER'S NOTE

LIKE much of the Volkswagen range, the Tiguan drives at its best when equipped with the optional adaptive dampers – part of a pack that VW calls "Dynamic Driving Package with Adaptive Chassis Control". These greatly widen the spread of the Tiguan's abilities, increasing body control through tighter turns, and ride comfort on more open roads. Cars with the standard springs and dampers tend to fidget more over pretty much all road surfaces, but in their softest setting the adaptive dampers take the edge off.

Alex Ingram
Chief reviewer

FEATURES
Touchscreen (above, left) is impressive, but handles climate settings, rather than having physical controls; rotary dial on the centre console (above, centre) operates various functions; front seats (above) are supportive

> **"THE TIGUAN IS AMONG THE MOST SPACIOUS CARS IN ITS CLASS FOR PASSENGER AND BOOT SPACE"**

was less impressive, however, with a final position of 27th out of 31 manufacturers. Only Cupra fared worse out of the Volkswagen Group brands, while the other three falling below it were Dacia, BYD and MG.

WARRANTY 2.5/5★

ALL Volkswagen cars come with a three-year, 60,000-mile warranty, plus a single year of breakdown cover is included, too.

SERVICING 3.9/5★

VOLKSWAGEN recommends a two-year service interval for mild-hybrid versions of the Tiguan. A service plan is available to cover either two years (one service) or four years (two services), but it's relatively expensive compared with the three-year maintenance packages of many rivals.

WHAT WE WOULD CHOOSE

KIA There's a choice of five exterior colours on the base trim, while Wolf Grey and Experience Green are added to the palette for GT-Line and S models. A third, Lunar Silver, is only offered on the GT-Line S and also has a contrasting black roof.

NISSAN Beyond the eight exterior paint colours, there's only one cost option offered to Qashqai buyers on our favourite N-Connecta trim. The £750 panoramic sunroof lets lots of light flood the cabin and it's keenly priced by glass roof-standards.

VW We've mentioned the must-have adaptive dampers, but also on our want list for the Tiguan is the Winter Pack (£415), with heating for the steering wheel and front seats. Leather-trimmed, massaging seats are pricey, though, at £2,925.

KIA SPORTAGE

BEST FOR EQUIPMENT

Even the entry-level Sportage is loaded with standard equipment, with the range-topping GT-Line S furnished with all of the luxuries you'd ever want

NISSAN QASHQAI

BEST FOR EFFICIENCY

The Qashqai's latest hybrid technology isn't just smoother, more refined and slightly quicker than before, it also delivers excellent real-world efficiency

VW TIGUAN

BEST FOR SPACE

The Tiguan is huge inside, with both cabin and boot space ranking up with the class best. The Volkswagen's interior is a very nice place to spend time, too

★★★★½
Nissan Qashqai

THE Mk3 Qashqai has been crying out for a competitive powertrain since its launch. Four years on, the e-Power tech has matured with the responses, smoothness and very nearly the refinement of a fully electric car, but with the flexibility of a fuel-sipping petrol engine that allows for huge ranges between refills. One of the very best-selling cars in the UK is now also one of the best family cars in the business.

RUNNER-UP ★★★★☆

Kia Sportage

WHILE the Sportage might be more popular than the Qashqai with buyers, as an overall package, it just falls slightly short. If you consider cabin and boot space a dealbreaker, the Kia is still the car to have. But in other areas, including the chassis and its hybrid powertrain, it can't quite match the Nissan's quality. Even so, its value, generous kit levels, smart interior design and strong performance – plus a seven-year warranty – mean that there's a huge amount to like here.

INTERESTED? Scan the QR code for great prices on new Sportages

THIRD ★★★★☆

Volkswagen Tiguan

THIRD place might make Tiguan owners feel we're doing the car a disservice, but in reality it has only narrowly fallen short of the class's two best cars. In some ways, it's the pick of this bunch for its superb practicality and strong overall driving experience. But beyond the lure of the VW badge, we don't feel like there's enough reason to spend more on the Tiguan – a lot more if you delve into the options list – when both the Qashqai and the Sportage offer so much for the cash.

THE SPECIAL ONE
Steve's still smitten with his Type R after a return trip to north Wales from West Sussex

SECOND REPORT

HONDA CIVIC TYPE R

The last ever Type R looks like it's also going to be Honda's best ever

TALENTS
With the rear seats down, the boot is surprisingly spacious. Brembo brakes are brilliant for track work, while the six-speed manual is probably the best ever made

IT'S a special kind of car, the Civic Type R. Yes, an acquired taste, perhaps, but for anyone who truly 'gets' cars, it is that rarest of things – a machine that somehow manages to transcend any traditional notions of value.

In its way, it's as rare and intriguing as any Porsche or Lamborghini. As such it almost doesn't matter how much it costs. It is the latest, greatest and, sadly, also the last of the Type Rs, so it really is one of life's 'enjoy it while it lasts' moments.

And enjoy it I most certainly have – on each and every day since it arrived on our fleet just a couple of months ago with less than 500 miles showing on the clock.

So far I've done just over 2,000 miles in it at an average of 30.2mpg. I've driven it to Anglesey circuit in Wales and back, going the cross-country route on the way there (where it was immense), then on motorways and dual carriageways all the way back (when it was better than it might have been).

I've also used it plenty for the daily grind as well, and driven it to – and across – my favourite road at Beachy Head. And with only a couple of small side issues, it's proving to be every inch as good as we expected.

How so? For starters it is far easier to live with everyday than I feared it was going to be, or indeed compared with any previous Type R. Yes, there are compromises, the short gearing in sixth and consequent absence of true motorway refinement (and economy) being the most obvious. Yet even here it is just about quiet enough when cruising and still returns over 30mpg on a long motorway run, so neither can be considered a serious issue. Having said that, I do wish it had a seventh gear so that the revs could drop back to 2,000rpm at motorway speeds to make the car both quieter and more economical.

What's far better than I feared it might be is the car's ride. True, in Type R mode it is pretty dreadful, but in its Comfort setting the suspension becomes soothing enough to be just about okay, even on crummy town roads.

As is its packaging, especially its vast boot, into which I've managed to somehow squeeze eight wheels and tyres. However, the fact that there are still only four seats, not five, will dent its overall appeal for some.

I suspect many (me included) would also want a fast-shifting dual-clutch auto gearbox, too, were one available. But that was never going to happen, according to Honda.

And fair enough, because the Type R's six-speed manual 'box might be a bit of a pain in heavy traffic compared with a DSG auto, but on the right road, or on a track, it is a defining quality of this car. Why? Because pound for pound, it is probably the best manual gearbox of any car, ever, so fast and beautifully precise is its shift.

The less good bits? I still find some of the safety features too intrusive, specifically the faffs that are required to disengage the speed warning and lane-departure systems, both of which are on by default at start-up. Being picky, I also wish the nav delivered live traffic info – but then Apple CarPlay is standard fit.

Other than this, I'm seriously struggling to find fault with the car. Instead, I find myself discovering new reasons to fall even more in love with it on most days. As I say, it's a special kind of car, one that will mark the end of an era once it is gone.

MODEL TESTED:
Honda Civic Type R

On fleet since:	August 2025
Price new:	£52,605
Powertrain:	2.0-litre 4cyl turbocharged petrol
Power/torque:	325bhp/420Nm
CO2/BiK:	186g/km/37%
Options:	None
Insurance*:	Group: 43 Quote: £1,318
Mileage/mpg:	2,571/30.2
Any problems?	None so far

***Insurance quote** from AA (0800 107 0680) for a 42-year-old in Banbury, Oxon, with three points.

PROS
- Overall styling is lovely
- Brembo brakes work brilliantly
- Suede steering wheel is a delight

CONS
- Intrusive safety systems are a pain
- Ride is hard in Type R mode
- Big tyres produce a fair bit of noise

STYLING It looks wonderfully understated to our eyes, at least compared with previous Type Rs

AEX VERDICT ★★★★★

THE more miles I do in the Type R, the better it gets. Mostly. There are still some caveats concerning its ride, range and long-distance refinement, but for the majority of the time it's an absolute joy to live with – and drive. On the right kind of road – one that's open, twisty and ideally quiet – it is just about untouchable, even with a price tag of 52 grand.

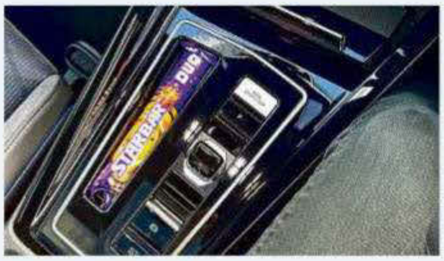
FLEETWATCH

ALFA ROMEO JUNIOR

WHEN we do our normal supermarket shop, we never worry about whether it's going to fit in the boot of our Alfa Junior. But with a couple of new storage baskets and extra shopping for visitors staying over for a couple of days, we weren't sure we would squeeze everything in. However, the 400-litre boot swallowed several bags without us having to stack things up and our guests were able to sit in the back seats, although room is tight there.

DAWN GRANT



VOLKSWAGEN GOLF R

SOMETHING thing that's been puzzling me more than most lately is the odd, oblong-shaped storage space on the centre console. It's seemingly useful for little more than a pen or pencil, and I'd questioned its purpose ever since the car arrived in early September. But then, after an impromptu Co-op meal deal on a recent Auto Express road test, it clicked: it's perfect for your favourite sweet snack.

CHINA: POWER TO CAR-BUYING PEOPLE

Chinese cars are revolutionising the UK car market. Our special report explains why

Phil McNamara

THIS is an extraordinary time for the UK car market. Nine new Chinese brands have entered this year and are rapidly racking up market share.

It's bewildering for many consumers: what does XPeng, Changan or Chery stand for? Our power list aims to answer your questions, including key ones about model ranges, warranties and dealer networks and whether they're investing in UK and European R&D.

One obvious benefit is that these hi-tech, lower-cost cars are, for now, acting as a brake on price inflation. It's anyone's prerogative not to buy a Chinese car for geopolitical reasons, but their competition will improve western cars. And for that we can all be thankful.

Phil McNamara

Phil.McNamara@autoexpress.co.uk

SKODA boss Klaus Zellmer has a map on his office wall, where he plots the confirmed R&D or manufacturing operations of Chinese car manufacturers in Europe. There are four pins in Germany, a couple each in the UK, Hungary and Italy, plus markers on Spain and Sweden too.

"How do the Chinese handle tariffs?" he explains. "If tariffs impose a risk and there's enough sales potential, they just invest into that area. We know China's ambitions and aspirations don't stop at its borders. Their invested capacities and volumes mean they need to export. They are very keen and aggressively looking into the export potential."

The Chinese influx of the UK and European car markets is in full flow. In the first half of this year, Chinese market share in Europe topped five per cent – up from two per cent at the beginning of 2023, calculates automotive data and analytics firm JATO. It's even more pronounced in the UK: from January to September, Chinese manufacturer registrations passed 150,000 cars – just under 10 per cent of the entire pie. Changan, Chery, Geely,

LDRUSH

CHINESE CAR FLOODING THE UK?

ritish market is so attractive to Chinese brands

Haval, Jaecoo, Leapmotor, Poer and XPeng: eight Chinese car brands have launched in this market since the turn of the year. Why?

As Zellmer says, there's a huge push factor from China. Car makers there are embroiled in a brutal price war, exacerbated by significant oversupply. There are reportedly more than 100 car manufacturers fighting for their survival, often subsidised by regional authorities that don't want their champions to fail.

Profits are slumping, incentivising manufacturers to look overseas. With Australia already penetrated and the USA closed by trade war, all sights are set on Europe, the world's second-biggest market.

Not that this is short-term expediency: China has been preparing for this moment since 2009, when the state identified the industry-changing potential of electric vehicles, betting that regulatory support could foster the technical expertise, raw materials and supply chain to leapfrog western car makers. The plan was formalised into the 'Made in China 2025' industrial strategy, published 10 years ago, and the bet has paid off spectacularly.

Skoda boss Zellmer reckons European technologists filed 200,000 patent applications in 2023, the US 600,000. The Chinese equivalent? An astonishing 1.6 billion. "That helps you understand how strong it is as a society, the drive, the engineering power of China," says the Czech manufacturer's CEO.

Europe hastily erected higher trade barriers after an enquiry into unfair state support for Chinese car makers. An EV surcharge was added to the existing 10 per cent duty, with each importer facing a different levy relating to their levels of co-operation with the investigation. BYD, for example, faces an extra 17 per cent duty, MG a chunky 48 per cent in total.

The UK has kept its import duty at 10 per cent – intensifying the Chinese rush to crack the world's seventh largest car market. "Not replicating the EU's anti-subsidy BEV tariffs makes the UK an attractive, higher-margin market the Chinese are likely to exploit," says European autos analyst Matthias Schmidt. "Also, there are no genuine domestic volume brands available anymore, which still acts as a moat in France and Germany where consumers are more patriotic."

Lothar Schupet, the European CEO of Geely's electric premium brand Zeekr, is already preparing to join the UK goldrush in 2026. His team commissioned market research from 8,000 consumers across multiple European countries and, intriguingly, found that Brits were the most open to Chinese cars. "Some 60 per cent said: 'I don't care which country the manufacturer comes from'," Schupet says. "And five or 10 years ago, they might have had negative sentiment about Chinese brands – now they say China has better technology."

LOTHAR SCHUPET European CEO Zeekr (Geely)

> **"SOME 60 PER CENT OF BRITISH CAR BUYERS DON'T CARE WHICH COUNTRY THE MANUFACTURER COMES FROM"**

Not every Chinese brand will succeed: it's critical to build a retailer network to sell and service the cars, Schmidt reckons. "The Chinese OEMs that stand the best chance of making a success in Europe are the ones that are already here."

And what does it mean for the European makers? "We just need to be better," concludes Zellmer.

WHO MAKES THE BEST CHINESE HYBRID?

There's a tidal wave of Chinese SUVs hitting our shores, but are they any good? We test five new hybrid models to find out

Richard Ingram

Richard.Ingram@autoexpress.co.uk

IF you find yourself sitting in traffic or travelling down the motorway this week, take a look around you. What do you see? Chances are, there will be a handful of cars you barely recognise, from manufacturers and makers you've possibly never heard of. The Chinese automotive invasion is in full swing – and British roads are living proof of it.

It's quite unlike anything we've experienced before. When the Japanese started making inroads to the UK back in the sixties, the size of the new-car market was a fraction of what it is today. The Koreans came in the eighties and nineties, but it was decades before anyone took them seriously; the class-leading Hyundais and Kias we drive today are a far cry from the cars that brought the brands to Britain all those years ago.

But with the onslaught of electrification gathering momentum – hybrid, plug-in hybrid and full-EV accounted for more than half the market in September – buyers are at a crossroads. Many are asking whether now's the time to part ways with Peugeot, say 'au revoir' to Renault, or veto their Vauxhall. Some may even be ready to turn their back on Europe's big premium players.

But is there more to these state-backed SUVs than a temptingly low list price? Should they warrant your attention, and can they hold a candle to a car industry that has been operating without a new threat for the best part of three decades?

To find out, we've pulled together five Chinese hybrid newcomers to pick apart every key consideration that a potential buyer might face. We'll look at things like efficiency, practicality, kit and quality, as well as what they're like to drive, plus the most important point of all: value for money.

We've covered the infiltration of China in Europe fairly extensively; of the five brands here, only MG had a presence in the UK three years ago – and just one of the maker's line-up then still exists today.

The plug-in hybrid HS was only revealed in 2024, yet claims its title as the seventh best-selling car this year; as you read this, more than 25,000 will have been registered in 2025, via the company's 70-strong (and growing) dealer network.

BYD has risen from nothing, launching no fewer than eight separate models in a little more than two and a half years. The Seal U DM-i – another plug-in hybrid SUV – is a strong contender in the mid-size family SUV segment; 5,373 found homes in September, making it the country's sixth-biggest seller last month.

Of our quintet, the Jaecoo 7 is arguably the most intriguing. Despite the brand only launching in the UK early part of this year, it has shot to stardom almost overnight; the 7 is already the most searched-for car on Carwow's Find a Car service – knocking the Kia Sportage and Hyundai Tucson from their long-standing tussle for top spot.

But while the BYD, Jaecoo and MG all operate in the mainstream part of the market, the Omoda 9 is a different proposition. Starting from whisker less than £45,000, this is a 443bhp premium plug-in hybrid pitched as an alternative to cars like the Audi Q5 and BMW X3. While that sounds like a stretch, you might think differently when you consider the sizeable price difference; the Omoda is more than £13k cheaper than the statistically inferior X3.

The final car is the Haval Jolion Pro. It's from parent company GWM, which brought us the Ora 03 (formerly Funky Cat) and more recently, the Poer 300 pick-up. Unlike the BYD, Jaecoo, MG or Omoda, the Haval doesn't have a plug; instead, this full hybrid comprises a small battery, electric motor, and a 1.5-litre petrol engine, feeding power through a two-speed gearbox to the front wheels. It's also the cheapest car here by some margin.

> **"BUYERS ARE AT A CROSSROADS. MANY ARE ASKING WHETHER NOW'S THE TIME TO PART WAYS WITH PEUGEOT, SAY 'AU REVOIR' TO RENAULT, OR VETO THEIR VAUXHALL"**

The day starts at Brewpoint Bedford giving us the plug availability to hook up each of the PHEVs, while parking the Jolion Pro to one side. Of course, this task would normally be done at home, but for the fairness of our test, we want to charge each to 100 per cent before zeroing the trip computers.

And hereby presents our first challenge. The BYD, Jaecoo and Omoda all come with CCS fast-

WHAT WE CHOSE TO TEST AND WHY...

Haval Jolion Pro Ultra

Price: £29,995
Powertrain: 1.5-litre 4cyl petrol hybrid
Power/torque: 186bhp/375Nm
EV range: N/A
0-62/top speed: 9.0 seconds/115mph
Size (L/W/H): 4,470/1,898/1,625mm

MG HS PHEV Trophy

Price: £34,745
Powertrain: 1.5-litre 4cyl petrol PHEV
Power/torque: 295bhp/350Nm
EV range: 75 miles
0-62/top speed: 6.8 seconds/105mph
Size (L/W/H): 4,670/1,890/1,663mm

BX74 EDU
LC74 OEM

Pete Gibson

PREPARATIONS The cars (above) were fully charged before the off, while everyone on the test team (below) had their 'tank' brimmed, too

CHARGING

With a PHEV, charging rate is key. There's no point using a rapid outlet if the car can't accept the charge quickly enough

Energy info. stat

Jaecoo 7 PHEV

Price: £35,165
Powertrain: 1.5-litre 4cyl petrol PHEV
Power/torque: 201bhp/310Nm
EV range: 56 miles
0-62/top speed: 8.5 seconds/112mph
Size (L/W/H): 4,500/1,865/1,680mm

Omoda 9 SHS

Price: £44,990
Powertrain: 1.5-litre 4cyl petrol PHEV
Power/torque: 443bhp/700Nm
EV range: 93 miles
0-62/top speed: 4.9 seconds/124mph
Size (L/W/H): 4,775/1,920/1,670mm

BYD Seal U DM-i Comfort

Price: £35,315
Powertrain: 1.5-litre 4cyl petrol PHEV
Power/torque: 214bhp/300Nm
EV range: 78 miles
0-62/top speed: 8.9 seconds/105mph
Size (L/W/H): 4,775/1.890/1,670mm

ON THE ROAD

Most of the cars on test drove well enough, but the Haval felt a couple of generations behind the rest charge capability, but the MG makes do with a slower Type 2 connector. Astonishingly, the HS's dash readout tells us that charging from 65 per cent to full will take almost two hours drawing just 4kW. We head inside for a coffee.

Not wishing to do the MG a disservice, the three other PHEVs do, admittedly, offer quite a variety of charge speeds. The BYD, for example, peaks at just 18kW, which makes plugging in to an (expensive) rapid charger somewhat futile. That said, during our test, it pulled strongly from the start; we see 17kW at 26 per cent state of charge – suggesting we'll be at 80 per cent in just over half an hour.

The Jaecoo's 40kW maximum is considerably quicker, although you'd still need to weigh up whether 82 pence per kWh (on Osprey's flat rate charging tariff) is worth the expense. To our minds it's not – at that price, you'd need to average more than 5.3mi/kWh to match a petrol car doing 40mpg. It makes the act of plugging in away from home a fruitless endeavour – even if we notice the 7 replenishing at up to 33kW, deep into its extended charge curve.

The Omoda, meanwhile, beats some early EVs for ultra-fast top-up times. The BMW i3, for example, never exceeded 50kW, even late in its decade-long production run. This Chinese SUV, despite having a four-cylinder petrol engine and dual electric motors fed by a whopping 34.5kWh battery, recharges at up to 70kW – good for a theoretical 30 to 80 per cent refill in "just over 20 minutes". In reality, we see it slow to just 13kW at 78 per cent charged – at which point it trickles home barely any faster than the MG.

With the cars (and Auto Express staffers) all topped up to 100 per cent, we can zero the trip computers. In a process honed over several decades, most European cars can perform this menial task via the press of a single button on the steering wheel or dashboard. But as we find out, the Chinese want you to work for your lunch. We spend an inordinate amount of time resetting each car; the Haval takes the prize for being hardest to fathom – an issue we'll delve into further as the day progresses.

We'll be running each of the cars in their default drive mode, which varies between 'Eco' and 'Normal' across the five models. This seems like the fairest way to test, along with the climate controls set to a comfortable temperature and in their automatic setting; it's not a particularly warm day, so none of the systems will be working overtime trying to keep the cabin cool.

Our first destination is Milton Keynes, around 18 miles from our start point. It takes in a variety of roads, but nothing that our plug-in hybrids can't complete entirely on battery power. I begin proceedings in the Jolion Pro – not only because it's the most affordable car in our line-up, but also because its tiny battery means we'll be leaning on the petrol engine as soon as we leave base. It represents a total departure from the Volkswagen Golf I drove up to Bedford this morning – in more ways than one. I don't consider the Jolion to be quite the bag of nails that my colleague Jordan does (see his tester's note) but it does feel like the powertrain is writing a cheque that the chassis can't cash. The punchy electric motor means it feels more electric than some hybrids, certainly at low speeds, but pushing on through some of the faster, more flowing stretches close to Milton Keynes it feels out of its depth; the Kia Sportage, Nissan Qashqai and Volkswagen Tiguan are almost infinitely more composed, even if they cost considerably more in the first place.

But value comes down to more than list price. It's about the entire package, and too much lets the Haval down for it to represent even mediocre value for money. The cabin is spacious enough, but the 255-litre boot is tiny and leaves this family SUV more closely aligned to petrol city cars than even the most compact of crossovers.

Yet the most frustrating thing about the Jolion Pro is its glitchy infotainment system and frankly baffling user experience – something we've already experienced when trying to reset the car's trip computer. The instrument cluster, for example, shows its units in miles, while the central screen lists key information in kilometres – with seemingly no option to change it. The layout with which the stats are presented feels as if you need a doctorate to decipher, too. The less said about the stuck-on DAB aerial attached to the windscreen, the better.

It's refreshing, therefore, to hop from the Haval into the Jaecoo 7. Theoretically, of our four plug-in hybrids, this has the shortest electric-only range. Its maker claims it'll do 56 miles before needing to be plugged in – plenty more than first-generation PHEVs like the Mitsubishi Outlander, but still around 20 miles shy of both the BYD and MG tested here.

Despite looking a bit like a shrunken Temu Range Rover outside, the Jaecoo immediately feels better

JAECOO 7 TESTER'S NOTES

PHIL McNAMARA

"'Light', 'glutinous', 'like an errant toddler' – going back through my notes skewers the steering on all these cars bar the MG. The toddler in question was the Jaecoo 7, which needed a lot of attention to stay on course. But the drivetrain is pretty good, with decent punch and only serious acceleration firing up the petrol engine. Indeed the throttle triggers some torque steer, with the front end also skipping over bumps under acceleration. I love the simplicity of two big buttons to toggle between pure electric and hybrid, but wish Jaecoo had applied the same effort to the window switches."

OMODA
Powertrain was switching into fuel-using mode without any of our testers being aware

HAVAL
Jolion Pro came in for some scathing comments, because it felt really unrefined and imprecise on the road

> “I DON’T CONSIDER THE JOLION THE BAG OF NAILS THAT ONE COLLEAGUE DOES, BUT ITS POWERTRAIN IS WRITING CHEQUES ITS CHASSIS CAN’T CASH”

HAVAL JOLION PRO TESTER’S NOTES

JORDAN KATSIANIS

“The Jolion Pro feels like a developing-market car that’s been modified to sell in Europe. The Haval has been stuffed with a relatively powerful hybrid powertrain and technology interfaces that were never initially designed to fit. Everything feels imprecise, from the ride and handling, which is stiff-legged and unsophisticated, to the body roll and steering that’s unable to really handle the torque being produced by the powertrain. Despite decent pick-up from the e-motor and the ability to manoeuvre on battery power alone, the engine is noisy, with a tendency to drone under heavy loads or at high speeds.”

CUT ABOVE
The Omoda (above left) and MG feel like well developed products that deserve to steal sales from the big-name Euro brands

built. There are premium-ish materials dotted around, the centrepiece of which is a large, tablet-like infotainment screen in the middle of the dash.

The chunky central transmission tunnel houses a big storage cubby, two cup-holders and a pair of wireless phone chargers, one of which is cooled via a tiny fan – a certified boon for anyone who has had their device overheat while attempting to run media and maps simultaneously via Apple CarPlay or Android Auto. Window switches that operate in the opposite direction to what you expect can be filed in the irrationally annoying column, however.

Being able to cover more than a few metres on electric power makes the Jaecoo feel much more ▶

COMFORT
The BYD has soft suspension, which makes it comfortable on rough surfaces

INTERIOR
BYD is competitive on price, and has a cabin that feels premium. It's a fine place to while away motorway miles

mature – and modern – than the Haval, but with less than 20 miles on the trip computer, we're still a long way from needing the petrol engine to take over proceedings. Pootling around town, the 7 is a perfectly agreeable thing to drive, keeping up with traffic and manoeuvring elegantly through gaps and over street furniture. The ride's a little fidgety, but far from a dealbreaker.

However, things start to come undone as we increase the pace. Milton Keynes is famous for its countless roundabouts and quick dual carriageways – and neither of them feels like the 7's friend. The front end often appears to be disconnected from the driving experience, and mid-corner bumps upset the car's balance.

Despite these faster runs, all while trying to keep up with editor-at-large Phil McNamara in the Omoda, the Jaecoo manages 53 miles (just three miles short of its publicised official range) before flashing up a warning message on the sharp 13.2-inch touchscreen: "The battery of your vehicle is low. It is recommended to switch to the intelligent power saving mode," it reads.

At this point, with 17 per cent battery remaining, the car automatically fires up the petrol engine. It does mean that, in theory, the Jaecoo could go further on electricity, but the car's clever internals preserve a certain level of charge. Once the engine kicks in, we see the battery level climb; the Jaecoo refuses to operate solely in EV mode until the cells are sufficiently replenished.

MG HS PHEV TESTER'S NOTES

ALASTAIR CROOKS

"The MG seemed better able to stick with EV power than the others; the 181bhp electric motor has enough poke on its own, and even at motorway speeds the petrol engine isn't required and therefore doesn't force the car to switch to HEV mode. The steering in the MG is the best of the bunch, even if it's a little delayed in its responses. Ultimately, it felt the most European of the cars we tested – perhaps a little brittle over rough ground, but soft suspension helps give it a comfortable ride overall. It settled down on the motorway, too – thanks at least in part to that well calibrated steering."

Now, I switch into the BYD, which alongside the MG, should manage more than 70 miles before defaulting to petrol power. Yet exactly as in its competitor, the Seal U DM-i's battery readout is still showing around 20 per cent charge when the display shows zero miles remaining. We've covered just over 66 miles on electric power at this point, giving the BYD the third longest EV range of the cars on test.

As the miles tick by, I barely notice the transition from electric to combustion power, and if I hadn't been monitoring the range readout on the dash, I think it would have passed me by entirely. The switch in the BYD feels smoother than it did in the Jaecoo, adding to a strong overall sense of comfort and refinement.

I'm thankful to be driving the BYD for our chunky stint north towards Leicester, on an unusually free-flowing M1 motorway. This confirms my thoughts from driving the Seal U DM-i on the international launch last year, in that the softly sprung SUV is better suited to this kind of route, rather than rural roads with fast changes of direction. If this tallies with your driving style, or you spend a lot of time in town, the BYD is a perfectly pleasant place to be.

With the novelty rotating touchscreen in its landscape orientation, we can sit back and revel in the Seal U's premium-feeling interior. It doesn't offer Mercedes levels of luxury, but for the price (from £33,315 in base Boost trim) it's easily a match for its mainstream European rivals. It trumps almost every one of them for space, too; the BYD feels big, both in terms of its outright footprint, as well as roominess inside. The raised driving position gives a good view out, and you won't struggle to fit taller adults in the back. Its boot is slightly on the small

“I’M THANKFUL TO BE DRIVING THE BYD FOR OUR M1 STINT. THE SOFTLY SPRUNG SUV IS BETTER SUITED TO THIS ROUTE”

BYD SEAL U DM-I TESTER’S NOTES

RICHARD INGRAM

“The BYD Seal U is arguably the car I have the least to say about, which in itself, tells you everything you need to know. Yes, it’s handling is a bit floaty, but the in-car technology is on point, and it displayed reasonable efficiency. It also had a strong 66-mile battery range. But answer me this: why fit a CCS rapid-charge connector to a car that can pull barely 20kW on a suitable DC public charger? No one’s going to plug it in away from home – and it just adds unnecessary cost and complexity to a car that could be even more of a bargain than it already is.”

A508
M1
BX74 EDU

side though, and there's only a little under-floor storage, so the charging cables will need to sit alongside your luggage.

While I've been driving the BYD, Phil notes that the MG's battery manages just one mile shy of its official, WLTP-stated maximum. The fact it has returned 74 miles of electric-only running over such a varied – and often high-speed – test route is astounding. Unless the Omoda can surpass its quoted 93-mile range, the HS will take the crown as the model that comes closest to its advertised numbers, which as we well know, is no mean feat.

As I swap into the Omoda at our next stop, I get an almost identical message to that in the Jaecoo – no surprise considering both are owned by parent company Chery – suggesting the car is set to switch into its intelligent power-saving mode. There's some confusion, however, because the trip readout is showing 102.9 miles covered since we set off – 10 miles more than its official figure.

Delving into the car's menus, I notice a tab that lists the amount of fuel used since we reset the trip computer: 4.2 litres. It seems the Omoda has been secretly sipping petrol without any of us realising, which is credit to its refined powertrain, of course. But it poses a problem when analysing efficiency, and forces us to think on our feet.

Resetting the trip once again, we keep an eye on how many miles we cover before using another 4.2 litres of fuel – before subtracting that number from the 102.9 miles we'd previously covered. The result is around 26 miles – suggesting the Omoda 9 is capable of 76-77 miles in EV mode. That makes it the longest-range PHEV here, but hands the MG the award of coming closest to its maker's claim.

My biggest takeaway to this point is that the Omoda is definitely the car with the chance of pulling premium prospects away from European stalwarts such as Audi, BMW and Mercedes. It feels heavy, stable and well engineered – aside from the grabby brake pedal, that is – with plenty of high-end materials and features in the cabin. The twin-screen infotainment system is encased within a single, curved display, while the chunky rotary dials on the centre console operate with a lovely tactility. The hard trim on the centre armrest is exactly where you rest your elbow, though.

My final stint back towards base comes courtesy of the MG. As mentioned, this is the brand with the most recognition in the UK, even if you discount the equity it built assembling classic MGBs in the sixties and seventies, or MGFs in the late nineties. It certainly feels the most familiar, and the most akin to a European, Japanese or Korean SUV. Quality is good enough considering the price, and refinement is excellent – even on rougher roads or concrete sections of motorway.

Although the battery is, in effect, empty, the car still manages to juggle its power sources without much interruption – pulling away using the electric motor, before engaging the combustion engine as needed. The steering is a little slow, but the benefit of this is that it doesn't feel at all twitchy on faster roads, making it a relaxing thing to drive.

It's quite the contrast to the almost incessant beep and bongs that have accompanied our test today. None of these Chinese SUVs is immune from the relentless, nannying safety aids that their makers will claim are there to help you, when in reality, they do more to distract you than focus your attention on the road ahead. They can be turned off, of course, although rarely very easily; this is a distinct point of difference whereby European rivals better cater to localised tastes, and an undisputed area for improvement when

"IT SEEMS THE OMODA HAS BEEN SECRETLY SIPPING PETROL WITHOUT ANY OF US REALISING, WHICH IS OF GREAT CREDIT TO ITS REFINED POWERTRAIN"

DOUGHNUTS The Auto Express test team was fuelled throughout the day by confectionery

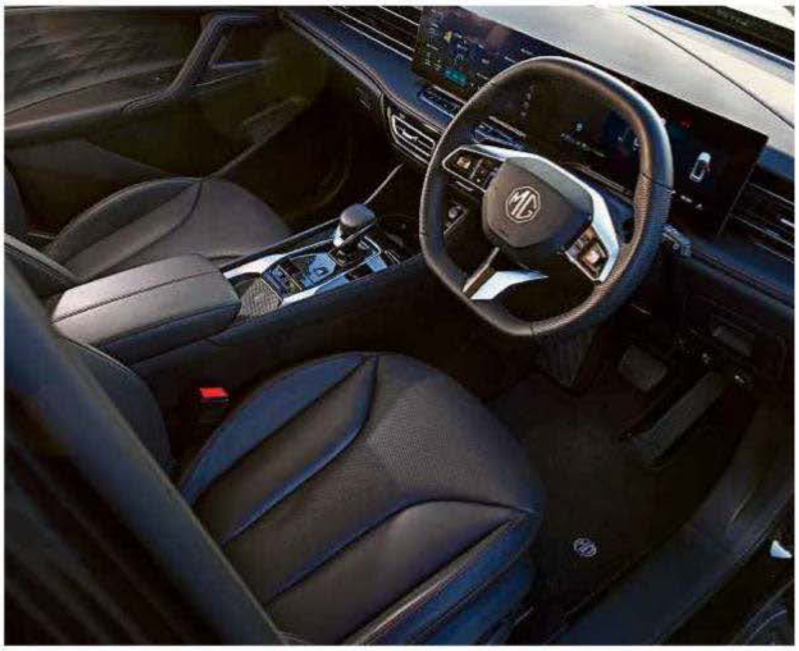
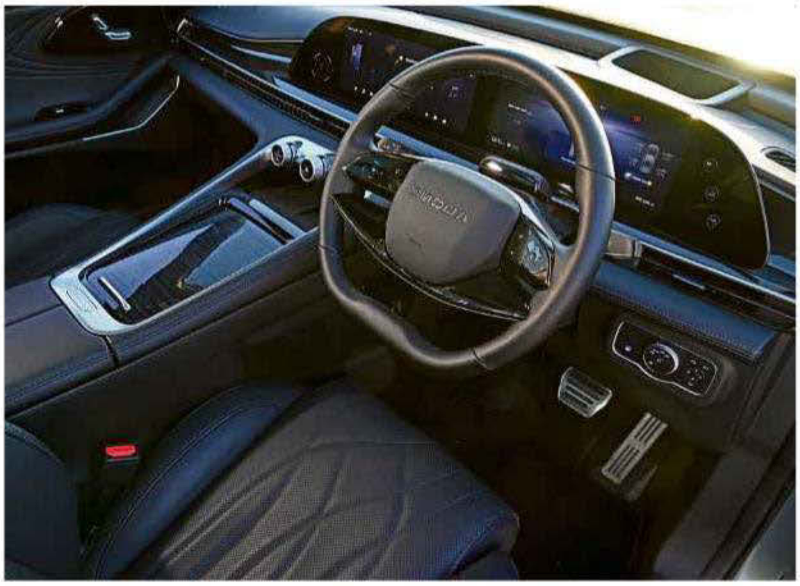
OMODA 9 TESTER'S NOTES

DARREN WILSON

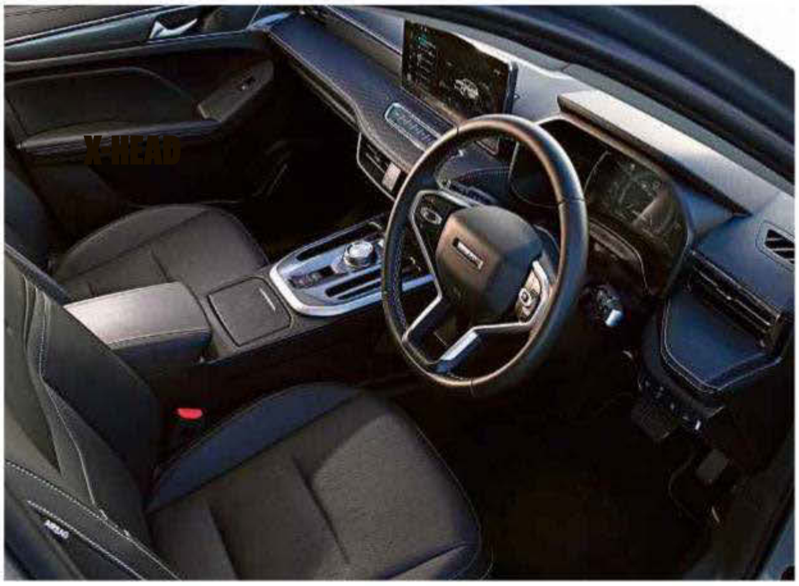
"The Omoda's interior was simple to navigate. It let me set a nav destination and control the air-con with centre dials; I found the whole thing pretty premium, which it should be. Drive-wise, however, it felt a bit heavy and underpowered – and certainly shy of Omoda's claimed 443bhp. At one point, I took a sharp corner at speed, and the body roll was truly nasty. Saying that, I liked it better than the Jaecoo, which felt rather loose at the front end. Perhaps most telling was how much I enjoyed hopping back into my Cupra at the end of the day; the difference in how the two cars drove was marked."



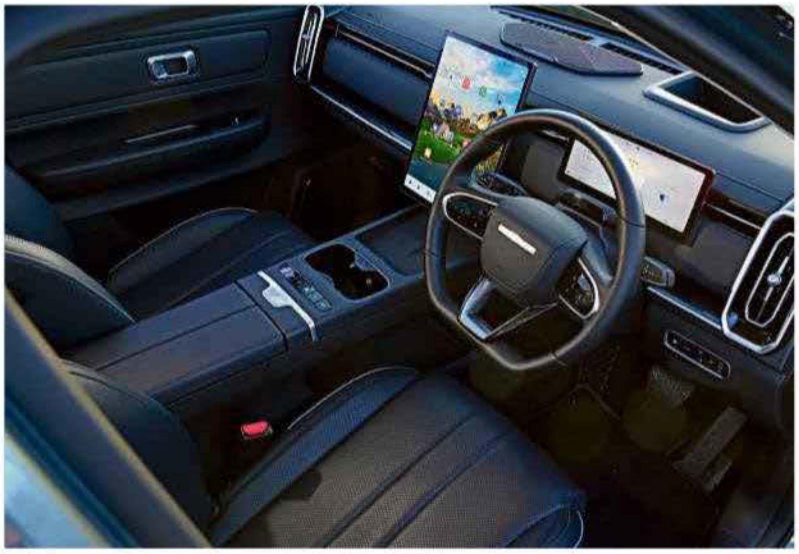
MG HS Cabin feels nicely put together using decent-quality materials. This top-spec Trophy version comes with a vast amount of kit as standard



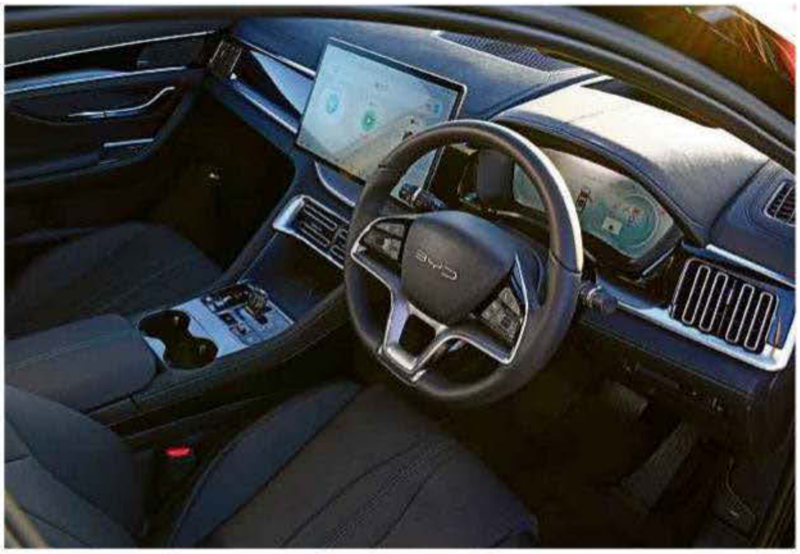
OMODA 9 The interior of the Omoda feels like a grade above those in the other cars here. It could rival the premium German brands for quality



HAVAL JOLION PRO If there's one car here that fails miserably, it's the Jolion Pro. The infotainment system's user experience is genuinely dreadful



JAECOO 7 There's a vast amount of storage in the 7, most notably the huge cubby between the front seats. Wireless charging pad is cooled, too



BYD SEAL The inside of the BYD is a genuinely pleasant place to be, and as well as the classy-feeling trims there's also a vast amount of cabin space

▶

it comes to the new brands convincing British buyers that we really should take these Chinese newcomers seriously.

One final calculation that needs completing before we sign off is an assessment of average fuel economy after the hybrid batteries ran out of charge. No car shamed itself in this regard – it seems days of lugging around a heavy battery for little to no benefit are behind us, although some performed better than others.

Indeed, we didn't expect the lightweight Haval to finish bottom of the pile; 44.1mpg is by no means disastrous, but without the hefty high-voltage battery of its competitors, we expected more. Both the MG and Omoda managed to return 44.8mpg, which shows the latter in a particularly positive light given it's also the heaviest car here, and the only one that exceeds two tonnes.

The BYD returned a strong 47.9mpg with a discharged battery, which is comfortably more than you'd expect for a petrol or even hybrid car of this type – the revised Kia Sportage managed just 43.8mpg in our latest road test.

But the true champ when it comes to engine-on fuel economy was the Jaecoo 7 PHEV, which posted a solid 51.4mpg on the trip computer. While we wouldn't recommend doing so, it provides proof that if you wanted or needed to, you could run any one of these without fear it's hammering your bank balance – even without plugging it in at every opportunity.

VERDICT:

IT'S difficult to rank these cars in any definitive order, given that only a couple can be considered direct rivals. That said, if push comes to shove, which of these Chinese newcomers should command your hard-earned cash, and which – after a constricted, short and snappy lifecycle – should be consigned to the history books?

To answer the latter part of that question, the only car we truly struggle to recommend is the Haval. It might be cheap, but it's far from cheerful. The driving experience is lukewarm at best, while the infuriating infotainment and general user experience is nothing short of appalling. It's rare that a company gets the fundamentals so wrong, but the Jolion Pro is a car that falls so far short of European tastes that it should be sent back on a boat to the country it came from. Buy a used Nissan Qashqai e-Power – you won't regret it.

The Omoda 9 sits at the opposite end of the scale. But while it might cost almost twice as much as the Haval, it's unquestionably twice the car. There's little wrong with it, in all honesty, aside from the lacklustre drive and grabby brakes, but at this price point it needs to do more to stand out. It's difficult to see buyers chopping in their premium-badged BMWs for the chance to drive an Omoda – even if the 70-odd miles of electric running could work wonders for your company-car tax bill.

The most well known models each do just enough to warrant significant attention if you're in the market for an electrified family SUV that can do everything their European counterparts can but for a fraction of the price. The Jaecoo is the most design-led (or should that be Range Rover design-led?) of the three remaining candidates, but it's let down by a floaty, sometimes disconcerting driving experience. Strong ICE efficiency and a reasonable EV range claw things back, but ultimately, the 7 falls short of both the BYD and the MG.

The BYD is an attractive proposition, both in this company and in its own right. The company's ambition cannot be overstated, and the billions it's pouring into R&D is served well in the Seal U DM-i. It's better suited to urban journeys or longer motorway trips, but the comfy cabin and snappy infotainment mean it's no chore to drive. A strong EV range means it pips the Jaecoo.

Probably the biggest compliment we can pay the MG HS, which is our undisputed champion in this company, is that it felt the most European of all the cars tested here.

We found the HS to be impressively refined on the motorway, with little wind or road noise and a comfortable ride. Yet none of that came undone when it was faced with a challenging A or B-road – the slower steering stopped it feeling too alert or twitchy, and well contained body roll prevented its occupants from being thrown about too much.

Factor in the bargain price (our car was the top-spec Trophy version, but the cheaper SE starts from just a fraction more than £32k) and a hybrid battery range that falls just one mile shy of the manufacturer's claim, and you've got a spacious family SUV that should be as easy and rewarding to live with as anything with a Skoda or Volkswagen badge on the bonnet. The MG HS PHEV is about as good as Chinese cars get.

RESULTS

Car	Price	Powertrain
1. MG HS PHEV Trophy	£34,745	1.5-litre 4cyl petr
2. BYD Seal U DM-i Comfort	£35,315	1.5-litre 4cyl petr
3. Jaecoo 7 PHEV	£35,165	1.5-litre 4cyl petr
4. Omoda 9 SHS	£44,990	1.5-litre 4cyl petr
5. Haval Jolion Pro Ultra	£29,995	1.5-litre 4cyl petr

INVASION
The Chinese manufacturers are coming, but many still have a way to go before they can match European rivals

“THE MOST WELL KNOWN MODELS EACH DO JUST ENOUGH TO WARRANT SIGNIFICANT ATTENTION IF YOU’RE IN THE MARKET FOR AN ELECTRIFIED FAMILY SUV”

BUILT IN CHINA – BUT YOU MIGHT NOT KNOW IT

WUHAN CLAN

One in 10 cars sold in the UK are made in China. But not all of them are from Chinese brands. Do you know your Ningde from your Chengdu?

Ellis Hyde

Ellis.Hyde@autoexpress.co.uk

CHINA reportedly produced more than 31 million cars last year alone – almost double the amount cranked out across the whole of Europe. Indeed, many big European brands have capacity in China, either building cars in joint ventures for the domestic market, or assembling them for export.

So you could have been driving a 'Made in China' car without realising it – like these 10 dual-nationals, for example...

1. Dacia Spring

Made in: Wuhan

YOU seriously never wondered how the Dacia Spring could have a price tag of just £15k? Being built in Wuhan isn't the only reason, of course, but it will certainly have helped this urban runaround earn the title of Europe's cheapest EV. It's produced there as part of a joint venture between the Renault Group and the Chinese manufacturer Dongfeng.

However, because the Spring is made in China, it's now slapped with an import tariff when entering the EU. Amazingly, this hasn't affected the price at all, but it explains Dacia's decision to produce the Spring's successor – which was hinted at by the mega-boxy Dacia Hipster concept – in Europe.

2. Cupra Tavascan

Made in: Anhui

THE Cupra Tavascan was named after a small Spanish village in the heart of the Pyrenees, just outside Andorra, and designed in the sporty brand's home of Barcelona. Yet it's built some 6,000 miles away in the Volkswagen Group's Anhui factory, because apparently production capacity in Europe is too limited.

Curiously, it seems enough for Audi, Skoda, Volkswagen and even Ford, because all their cars that use the same MEB platform are built in Europe. Even the Cupra Born electric hatch, which sits on the same architecture, is assembled in Zwickau, Germany.

7. MINI Cooper Electric

Made in: Zhangjiagang

THE MINI Cooper is a British icon and the modern iteration of the beloved hatchback is famously built in the same Oxford plant that made the original Morris Mini. Or rather, the petrol-powered models are; the new Cooper Electric is made in Zhangjiagang, in Jiangsu Province, as part of a joint venture between BMW and the Chinese automaker Great Wall Motor, which helped develop the car's platform.

MINI had announced it would move production of the Cooper Electric to Oxford, but we revealed those plans were put on ice in February due to slower-than-expected EV uptake.

3. Lotus Emeya

Made in: Wuhan

WHILE the Lotus Emira sports car is still built at the company's spiritual home of Hethel, in Norfolk, its 'lifestyle' EVs are built in China. That's because Lotus is one of the several European brands in which Geely has a majority ownership stake. The Emeya hyper-GT, along with its more practical yet no less malicious-looking sibling, the Eletre luxury SUV, are both built in Wuhan.

They are both based on the so-called 'Electric Premium Architecture' (EPA), which Lotus engineered but was derived from Geely's own, snappily named 'Sustainable Experience Architecture' (SEA) vehicle platform.

4. Tesla Model 3

Made in: Shanghai

IF you buy a brand-new Tesla Model Y in the UK today, it will be built in the company's gigafactory outside Berlin, Germany. However if you don't need the extra space and go for the closely related Model 3 saloon instead, that will be assembled in Tesla's Shanghai plant.

The game-changing EV has been built there since 2019 and, interestingly, some owners found the Chinese-made Model 3s had better fit and finish than the earlier models that came out of Tesla's first facility in Fremont, California.

> **"SOME OWNERS FOUND THE CHINESE-MADE MODEL 3s HAD BETTER FIT AND FINISH"**

5. Volvo ES90

Made in: Chengdu

VOLVO is one of Sweden's most famous exports, along with IKEA, ABBA and pickled herring. You'll even find little Swedish flags inside its cars as a nod to the homeland of this safety-obsessed and much-respected brand. But, as you've probably realised, it's also part of the Geely family these days.

Volvo has plants that produce different models all over the world, from Sweden to South Carolina, and of course, some in China. Its facility in Chengdu is where the all-new, all-electric ES90 executive saloon (see Top Story, page 6) is being built.

6. Smart #1 Made in: Xi'an

THE quirky car brand Smart was created in the nineties by the businessman who created the Swatch – yes, seriously – with the help of Daimler, parent company of an up-and-coming outfit called Mercedes-Benz.

Today, Smart is a 50:50 joint venture between Mercedes and Geely. It builds all its cars in China and the first model launched under this new partnership was the Smart #1 in 2022. Like all the brand's most recent offerings, it combines European design with the latest technology from China, although neither side has claimed responsibility for the bizarre hashtag-based naming strategy that also began with the #1.

8. MINI Aceman

Made in: Zhangjiagang

UNDERNEATH, the latest MINI Countryman is based on the BMW X1, so it's built in Leipzig, Germany, which in turn will have helped make it eligible for the UK Government's Electric Car Grant (ECG) that trimmed £1,500 off the premium, family-friendly SUV's price tag.

But the smaller, slightly funkier and all-electric MINI Aceman sits on the same EV platform as the Cooper Electric (left), so it makes sense that they're built in the same facility in Zhangjiagang and neither receives any money from the ECG.

9. Polestar 5

Made in: Chongqing

THE Polestar 5 was developed in Coventry, with over 280 engineers working on the four-door flagship GT and its bespoke, bonded-aluminium platform. Sadly, the car won't be built here. Polestar may be the sportier spin-off of Volvo, but it was established as a separate brand only after Geely acquired the Swedish firm.

So far, all Polestars have been made in China, including the Polestar 1, plus the Polestar 2, 3 and 4 EVs. However, the Polestar 7 coming in 2028 will be built in a new factory in Slovakia, shared with Volvo.

10. MG Cyberster

Made in: Ningde

THE MG Cyberster is supposed to hark back to the British brand's origins as a maker of lightweight two-seat sports cars.

However, although classics such as the MGB and MG TF were built here in Blighty, the Cyberster – like all of MG's cars since it was acquired by SAIC – is manufactured in China. The city of Ningde to be exact, in the same factory where the MG4 hatch, MG HS mid-size SUV and others are assembled.

THE CHINESE POWER LIST

WE RANK THE UK's CHINESE BRANDS FROM 17 to 1

Confused by the flood of unfamiliar names hitting the UK car market? Our countdown will reveal all

17 SKYWELL

UK importer Innovation Automotive is trying to grow fledgling brand

SKYWELL sounds like a James Bond blockbuster, but is the minnow of the Chinese EV pack. Skyworth Auto emerged from a Nanjing bus company eight years ago, and the BMW X3-sized BE11 crossover is the first car. The long-range version covers up to 304 miles and costs £39,995, while the 248-mile standard range version is £3,000 cheaper.

It's yet to make much UK impact; Skywell needs to convince leasing firms to offer a standalone car with unproven used values. Reinforcements arrive in 2026 with the '233' electric panel van and the Q hatchback, an MG4 rival. A big saloon may follow.

UK MODELS: Just the BE11 for now

OUR PICK: Nothing stands out; the BE11's range and charging are unimpressive

HOW BIG IN CHINA? Automotive spin-off from a electronics and commercial vehicle group

2024 GLOBAL EXPORTS: Not disclosed, but a future target is 50,000 units

2025 UK REGISTRATIONS: 20

RETAILER NETWORK AND WARRANTY: 15 family-run dealers, plus two standalone service centres; seven-year/100,000-mile warranty

WE SAY: Skywell will be the acid test to see if a small player can crack a market dominated by big-spending BYD and established player MG

> **"SKYWELL SOUNDS LIKE A JAMES BOND FILM, BUT IS THE CHINESE EV PACK MINNOW"**

16 MAXUS

Early adopter of EV power focuses on commercial vehicles, and plans to grow

MAXUS specialises in commercial vans and pick-ups in both diesel and all-electric forms, and is part of the huge SAIC Group that also owns MG. Unlike MG, though, its products are brought into the UK by a third-party importer, which specialises in other commercial brands such as Isuzu.

If you're thinking to yourself that you don't really recognise the Maxus badge, you would be forgiven, because its models were previously sold under the LDV name, or Leyland DAF Vans. In its modern context, the manufacturer is an early adopter of electric power in commercial vehicles, with all Maxus vehicles either designed for, or available with, a battery-electric powertrain, including the Mifa 9 luxury multi-purpose vehicle.

UK MODELS: Four passenger vans and pick-ups, six commercial vans

OUR PICK: Mifa 9 electric people carrier

HOW BIG IN CHINA? Strong in LCV and pick-ups

2024 GLOBAL EXPORTS: Not available

2025 UK REGISTRATIONS: Not available

RETAILER NETWORK AND WARRANTY: 90; five-year/62.5K or 100k-mile warranty

WE SAY: Maxus vans have largely gone under the radar. The pick-ups and passenger vans don't hold much weight, despite good EV adoption

TWIST & TWIST LOUNGE

15 GWM POER

New pick-up truck entrant has got the (pricing) power

POER wants to shake up the pick-up market with the classic formula for a new entrant: big vehicle at (relatively) small price. Enter the Poer300, an old-school, ladder-frame pick-up running a gutsy diesel engine. The truck brand from Great Wall Motors (GWM), Poer is pronounced 'power' and – sound the lost-in-translation alarm – supposedly stands for 'Powerful, Off-road, Enjoyable and Reliable'. It's a bit too soon to tell on the latter, given that the Poer300 only launched in the UK in September.

It's fine to drive and competitive on spec; the £31,495 Lux is the cheapest pick-up around, yet features wireless phone charging, park assist and lots of ADAS features. And the mid-spec Ultra cleverly tackles that perennial 'clambering into the load bay-challenge' with a step folding out from the tailgate. At 5.4 metres long, it's absolutely huge, with a 1,050kg payload.

GWM importer IM says it's targeting farmers and builders, in the hope of shifting 1,000 a year.

But lifestyle pick-up sales are a pipe dream now that double-cabs incur company-car tax: puffing out 221g/km of CO_2 places the 300 in the top tax bracket. Ouch.

It's not the first Chinese pick-up: GWM took that honour in 2012 with the Winglet 5, which was called the Steed over here. Funny that.

UK MODELS: Just the one pick-up

OUR PICK: Erm, the Poer300

HOW BIG IN CHINA? Part of Great Wall Motors, which has made 1.23 million vehicles

2024 GLOBAL EXPORTS: 453,141 (37 per cent of total sales)

2025 UK REGISTRATIONS: 25

RETAILER NETWORK AND WARRANTY: 47 GWM dealers/service centres; five-year/125,000-mile warranty

WE SAY: Poer will always be a niche maker, but it boosts choice in the pick-up truck market and keeps price pressure on rivals

14 GWM HAVAL

Havals are budget SUVs from Great Wall. Tomorrow looks tastier than today

STEP into the Haval Jolion Pro and step back in time to when Dacias felt like an impoverished collection of old Renault parts, or when noisy Toyota hybrids drowned you in flailing revs.

That's not to dismiss the Jolion Pro out of hand: its £23,995 price tag makes it one of the cheapest hybrid SUVs on the UK market. And that's Haval's positioning in a nutshell – it's Great Wall Motors' budget SUV brand.

Importer International Motors launched Haval in early 2025, needing to extend its offer beyond the Ora EV brand and buoyed by the Jolion Pro reaching the giddy heights of Australia's third best-selling sub-compact SUV. The model is 4,470mm-long, which makes for decent cabin space, although the boot is tiny. The JP may pull away in electric mode, but that's not enough to unlock more than 47mpg.

More interesting is what comes next. GWM is assessing the H9, a BMW X5-sized boxy SUV that, like many SUVs, looks like it owes the Land Rover Defender royalties. Available in China with four-cylinder petrol and diesel engines (the one in the Poer300), expect the Australian market to unlock right-hand drive to enable UK sales in 2026. The H6 – a crossover SUV sitting between the two in size and running petrol and hybrid engines – is also waiting in the wings.

UK MODELS: Jolion Pro

OUR PICK: Wait for the H9 SUV

HOW BIG IN CHINA? Part of Great Wall Motors, which has made 1.23 million vehicles

2024 GLOBAL EXPORTS: 453,141 (37 per cent of total sales)

2025 UK REGISTRATIONS: 126

RETAILER NETWORK AND WARRANTY: 47 GWM dealers/service centres; seven-year/unlimited-mileage warranty

WE SAY: The H9 will make or break Haval; the Jolion Pro wasn't the finest start point, and could put plenty of people off in the short term

13 GWM ORA

The Funky Cat has been put down, but there's plenty of life in the Ora brand yet

FUNKY Cat sounds like something you would have done at New York's Studio 54 during disco's peak. But car fans know it was the kooky model name of the EV that launched the Ora brand in the UK.

Sadly, the Funky Cat name is no more: the electric supermini has been rebranded as the 03. Ora's owners, Great Wall Motors, have clearly decided that, on balance, the irresistible shareability of such a daft name is more detrimental than an anonymous badge that could be a Smart or a Polestar.

The 03 was one of the first supermini-sized EVs, although that's no longer a sales advantage. Under that timewarp design lurks hardware shared with the MINI Electric: a joint venture between MINI and GWM assembles the pair. The 03 has a choice of 43kWh and 63kWh batteries, with ranges of 193 and 248 miles, and a flagship GT version, with a bodykit, diamond-turned 18-inch alloys and launch control. Yet it only has 169bhp – the same as the base-spec car.

Ora was set to be GWM's sole UK brand. But the EV transition's slowing momentum triggered the arrival of Haval and Poer, with Ora dealers rebranded to GWM and now also offering the hybrid SUV and diesel pick-up. Yet Ora will remain a pure-electric brand.

A plan to import the Ora 07, a retro saloon similar in length to an Audi A5, has been axed, with insufficient sales projected at its £40k-plus price. Instead, the 5 – note yet another naming approach – is set to arrive in 2026. It's an SUV that shares the 03's look, but is similar in size to a Nissan Qashqai. Expect a 201bhp front motor and a lithium-iron phosphate battery. The 5 will give Ora a boost, and help secure new retailers to build GWM's UK presence to 80 – backed up by importer IM Group's aftersales depot in the Midlands.

UK MODELS: Just the 03 (née Funky Cat) so far

OUR PICK: A Renault 5

HOW BIG IN CHINA? Part of Great Wall Motors, a 1.23 million-vehicle maker

2024 GLOBAL EXPORTS: 453,141 (37% of total sales)

2025 UK REGISTRATIONS: 268

RETAILER NETWORK AND WARRANTY: 80 dealers; five-year/unlimited-mileage warranty

WE SAY: Will struggle to cut through with Renault, MINI and Fiat successfully mining genuine heritage

THIRD DEGREE
The Chinese-built Emeya GT is Lotus's third electric car, following the Eletre and Evija

12 LOTUS

This year has been disastrous for Lotus. Will 2026 start on a positive note?

ALTHOUGH not a new name, Lotus's brand is rising from the ashes to a new beginning under Chinese giant Geely. And next spring, the struggling car brand is expected to unveil the first of its 'hyper hybrids', sidelining its dream of a transformation off the back of EV sales.

The Eletre SUV, the first of Lotus' electric 'lifestyle' range, will be the recipient. It will live up to its 'hyper' billing: total system output can reach 1,395bhp, enough power for a genuine hypercar, let alone an SUV. The flagship electric Eletre – with an excess of 900bhp – can hit 0-62mph in 2.95 seconds. This hybrid should be barely any slower.

The powertrain, already public in Zeekr's 9X, throws the technological kitchen sink at these luxury SUVs. There's room for a 70kWh battery, bigger than lots of pure EVs'. A 900-volt architecture helps it fast charge from 10 to 80 per cent in less than 11 minutes.

But the car should feel like a brutally fast EV to drive, due to its range-extender operation. The 2.0-litre turbo engine strictly powers the energy cell, which in turn spins two punchy electric motors on the rear axle and one on the front. The 9X ekes 746 miles from a fully charged battery and its 50-litre fuel tank: the Eletre has a similar stature, so that should be a good indication of range.

The hyper hybrid can't come to market soon enough. Lotus deliveries dropped by 43 per cent to just 2,813 cars in the first six months of this year. US sales are off limits for the Chinese-built Eletre and Emeya sports saloon, and EU imports face a 30 per cent tariff. No wonder China has accounted for the bulk of EV deliveries, but the Wuhan factory's capacity is about 2,500 times current demand.

Plus Hethel, Lotus's plant in Norfolk, has veered from one crisis to another. Deliveries of the Emira sports car plunged by 64 per cent between January and June, hurt by tariff uncertainty stalling US deliveries for four months. Lotus Technology boss Feng Qingfeng asked for a review into options to stop Hethel's losses, including shuttering it: the plan leaked and owners Geely were forced to backtrack. And a further round of 550 redundancies rocked the site in late August. The hope is that other car brands could boost productivity with low-volume contract manufacturing. Geely's 2017 takeover was meant to transform Lotus, but losses today are far greater, despite a $3bn (£2.23bn) investment.

UK MODELS: Eletre and Emeya EVs, Emira coupé, Evija hypercar

OUR PICK: They're all great

HOW BIG IN CHINA? Tiny: the Chinese shift to homegrown brands has come at the wrong time

2024 GLOBAL EXPORTS: Around 9,000

2025 UK REGISTRATIONS: 1,098

RETAILER NETWORK AND WARRANTY: 16 dealers; five-year, 100,000-mile warranty (EVs), three years on Emira

WE SAY: Lotus is the car company that can't catch a break. Can Geely change its luck?

11 SMART

Once Daimler's arm creating cars for Euro cities, now China's toe-in to German workings

YOU might think you know Smart, but the firm is a world away from polycarbonate body panels and sub-three-metre city cars in 2025. That's because this very European brand has headed east thanks to a unique part-ownership deal between Mercedes and Geely. This sees Geely largely responsible for the development and manufacture of Smart's models, with Mercedes overseeing design and distribution in Europe. In 2019, Geely acquired 50 per cent of Smart as part of a wider joint venture with Mercedes.

However, the core of Smart's identity – the two-seat ForTwo – was taken off sale without a direct replacement soon after that acquisition. Smart now only sells much larger and more generic all-electric models that are developed in China with Geely underpinnings for global markets, making it, in effect, a Chinese brand.

The range is currently made up of three models, all with a 'hashtag' prefix attached. The #1 is a 4.3-metre-long crossover that shares its underpinnings with the Volvo EX30, while the #3 takes that same package and puts on a sleeker body.

Yet it's the #5 that is arguably the most ambitious model yet: this medium-sized SUV is more than 4.7-metres long, taking the notion of a Smart furthest away from its heartland. But are these cars any good? Inherently, no Smart is a duffer, but then none is a class leader in terms of tech, performance or efficiency, either.

There is one very big change coming, though. The ForTwo is being reimagined, with a two-seat city-friendly #2 coming in 2026. Smart CEO Dirk Adelmann told us this year how the development process is being balanced between Mercedes and Geely, saying: "We will grab from the shelf whatever we can. Mainly on the Geely side. We benefit from both sides in this adventure."

Smart isn't a big UK player with just 1,894 units sold this year to date, but this is expected to grow as more models come on-stream. Global sales of around 65,000 units is not bad considering the brand's limited two-car line-up. Support in the UK is extremely well established, with 34 dealers (still mainly attached to Mercedes retail outlets). All models also come with a standard three-year warranty.

UK MODELS: #1, #3 and #5

OUR PICK: #5 offers a strong package, but is far away from Smart's comfort zone

HOW BIG IN CHINA? 76,000 global sales, (39,000 units in China)

2024 GLOBAL EXPORTS: 37,000 units (approx)

2025 UK REGISTRATIONS: 1,894 units

RETAILER NETWORK AND WARRANTY: 34 dealers; three-year/unlimited-mileage warranty

WE SAY: The upcoming #2 will need to bring back Smart's original spirit of automotive innovation

> **"THE FORTWO IS BEING REIMAGINED, WITH A TWO-SEAT CITY-FRIENDLY #2 COMING IN 2026"**

10 GEELY

Geely is the juggernaut behind some of Europe's most important car brands, but is only now entering the mainstream

GEELY isn't a well known brand in its own right in the UK at the moment. But that's about to change with the introduction of its first Geely-branded model that'll sit right at the core of the huge C-segment SUV market, the EX5.

Geely was founded by Chinese industrialist Eric Li in 1986 making refrigerator parts, before moving into passenger cars in 1997. Yet it wasn't until 2010 that the brand turned its attention to global markets, acquiring Volvo, before later taking on Lotus and LEVC (the maker of London taxis).

It has its own new brands, too. Hire a car over in Europe and you'll probably find a Lynk&Co in the lot; and then there's Zeekr, which is seen as a cutting-edge EV maker in Chinese and international markets. But Geely is now making more of a concerted effort to launch models under its own name here in the UK, starting with the £31,995 EX5 SUV.

This 4.6m-long car rivals Chinese SUVs such as the MGS6 and significantly undercuts legacy models like the VW ID.4. But while its tech seems strong, the mediocre 287-mile range from a 60kWh battery pack doesn't break any boundaries. Instead, the EX5 is all about its competitive entry price – something that'll be maintained across future Geely models.

What will come next, though? One obvious move will be the introduction of the plug-in hybrid variant of the EX5 sold in some markets, but Geely has made no commitments beyond this, only to say more are coming.

The firm will launch in the UK with 15 showrooms, with a view to expand; we suspect it won't be long until it has a strong foothold with dealer groups. Yet Geely will not leverage the Volvo connection, or its dealer footprint, for sales and servicing. So should we take note of Geely? The resource, experience and tech certainly appear to be there, but the product doesn't seem to particularly stand out from the crowd. Yet.

UK MODELS: EX5 SUV

OUR PICK: To be confirmed

HOW BIG IN CHINA? 2.167m global unit sales

2024 GLOBAL EXPORTS: 414,000 (+52% YoY)

2025 UK REGISTRATIONS: None yet

RETAILER NETWORK AND WARRANTY: 15 dealers; eight-year/125,000-mile warranty, reduced to six years/100,000 miles post-promotional period

WE SAY: The UK media has yet to drive the EX5 on local roads

XPENG G6 and G9

9 XPENG

Lots of companies claim to be the new Tesla. Xpeng is more credible than most

AI-POWERED, four-limbed humanoid robots and flying 'cars' launching from a six-wheeled mothership vehicle might have sounded like a futurist's fever dream not so long ago. But they're just another day at the office of Chinese tech company XPeng.

He Xiaopeng founded the company in 2014: in just over a decade, XPeng has grown to around 40,000 employees – eclipsing Jaguar Land Rover in size – with 15 per cent working in R&D. Its global expansion includes R&D centres in Silicon Valley and San Diego, US, a listing on the New York stock exchange and a recently announced European manufacturing partnership with Magna in Austria.

The brand launched in the UK in February 2025, but its G6 spearhead – a 4.7m-long EV with two battery sizes – has already been superseded by an upgraded model. XPeng's USP is Europe's punchiest DC charging: the G6 draws a maximum 451kW to refuel the 80kWh battery in just 12 minutes (from 10 to 80 per cent). Like the Tesla Model Y it resembles, there's a Performance version with twin motors and 481bhp, and its circa-£49k price tag is at least £10k cheaper.

XPeng began with six UK dealers, tapping into the logistics and parts distribution network of IM Group. That unlocked an initial 30 service centres, which should grow to 45 by the end of the year, plus 18 dealerships.

The luxurious X9 MPV – with seven seats, active rear-steering, fridges and streaming screens – will attack the executive limo market, with an Indonesian factory already churning out right-hand-drive cars.

And in late 2026 the G6's bigger brother, the G9 crossover, will arrive. Like the G6, it's a five-seater with rear and all-wheel-drive options, a 93kWh battery and 525kW DC charging. Being able to pull those speeds gives XPengs an advantage over many EVs.

XPeng also claims to be one of the first auto makers rolling out global software updates over the air (not piecemeal by territory), and it's promising to expand its AI-enabled autonomous driving features too.

Volkswagen Group is already convinced: it has formed a joint venture with XPeng to create the electric and electronic architecture for all its future Chinese cars, and is co-funding the rollout of 20,000 chargers in 420 home cities. All these investments mean the start-up is currently burning through cash – like Tesla in the early days.

The target of 20,000 UK sales by 2030 looks very achievable.

UK MODELS: G6 crossover now; X9 MPV and bigger G9 in 2026

OUR PICK: G6 Performance

HOW BIG IN CHINA? Small, but growing

2024 GLOBAL EXPORTS: 190,068 (up 32%)

2025 UK REGISTRATIONS: 509

RETAILER NETWORK AND WARRANTY: 18 dealers and 30 service centres; five-year/75,000-mile warranty

WE SAY: European production and technical prowess make XPeng one to watch

"XPENG HAS GROWN TO 40,000 STAFF, ECLIPSING JAGUAR LAND ROVER"

8 POLESTAR

It was supposed to be the next big thing. Can Polestar turn its fortunes around?

POLESTAR has an unusual claim to fame: the UK is its biggest single market. Given that our volume is eight times smaller than the US's, and China's market is double that, this is obviously something of a mixed blessing.

But, registrations have doubled year-on-year, and the Scandi-Sino brand will take that. After all, 2024 was tough, with the New York Stock Exchange threatening to delist Polestar's stock because it was tracking below a dollar; the company burned around $400 million in a three-month period and founding CEO Thomas Ingenlath was forced to step down.

Enter Michael Lohscheller, the marathon-running, UK-loving veteran who used to head up Opel. He rose to CEO-level at Stellantis, a group that makes cost control an art form, so if anyone can get Polestar in the black, it's Lohscheller. He's certainly up against it: the brand lost $1 billion in the first half of 2025.

"We do see a lot of improvement on the financials: revenue is up 56 per cent, costs are coming down and operational losses are reducing," says Lohscheller in his trademark rapid-fire, Germanic delivery.

The high-riding 2 hatch may have shifted 180,000 units since its launch during the Covid pandemic, but Polestar's growth has been choked by a year-long delay getting the 3 SUV and 4 saloon into production. Lohscheller says using contract manufacturing at Geely family factories saves cash on assets and people, but the brand's reliance on Volvo technology did slow the cars' introduction.

Polestar's big headache is its reliance on Chinese manufacturing, which currently scuppers US imports of the 2, 4 and new, high-performance 5 sport GT. Thankfully Volvo manufactures the 3 in South Carolina, and Korean-factory exports of the 4 begin soon. The Chinese-built models also incur 19 per cent duties landing in Europe, but the home market is limited: Polestar avoids being seen as Chinese thanks to its Swedish heritage.

That's why the next new Polestar – the 7 compact SUV – will be assembled in Slovakia. "77 per cent of our sales are in Europe," the boss tells us. "So shipping cars around the world is not the best business model for various reasons: tariffs and CO_2 emissions. The more cars we can produce in Europe, the better."

Set to arrive in 2028, the 7 will be a rival to the BMW iX1 and Mercedes EQB. European autos analyst Matthias Schmidt predicts "the Polestar 7 could be one to watch".

Geely founder Li Shifu announced his Taizhou Declaration last year, calling for his brands to boost hardware, software and powertrain co-operation, to improve scale and eliminate internal repetition and competition. That's why Lotus and Zeekr jointly utilise a new performance hybrid, and the 7 will be based on a Geely-wide platform and shared software stack.

The 7 will be the most compact Polestar yet, similar to the 2 in price – just above £40,000. "It will be a premium car and it will go into a segment which is much larger [than existing models]. We will [ask]: 'what are the competitors from BMW, Land Rover and so on?'," says Lohscheller.

Polestar's ability to command premium prices – when most Chinese competitors are attacking the mainstream – is another reason why analyst Schmidt is confident that the brand can survive the current turmoil.

New design chief Philipp Römers, headhunted from Audi, will shape the crossover's design. It will feature dual L-shaped headlamps, flared wheelarches and horizontal graphics to stretch the width, as Römers seeks to boost Polestar's performance credentials.

But the 7 also needs to attract women. "It's a segment for slightly younger customers," explains Lohscheller. "When we looked at the first design sketches [we had to consider] female customers, because that's a big, influential group." Warmer and more colourful interior designs will also broaden the appeal.

Polestar is a UK success story. Lohscheller attributes it to high-performing retailers, the absence of Chinese tariffs, the ZEV mandate pushing EV quotas, and company-car tax breaks combining to allow the right EVs to fly.

But a total of 44,482 sales globally in the first nine months of the year is still small beer. Would Lohscheller go for the nuclear option and abandon the brand's strict EV-only philosophy with hybrid?

"Obviously we discussed that a lot," he tells us. "But if I said to our community, we go hybrid, they would go absolutely bananas and say, 'we are the EV brand'. Our EV focus is good, no compromises – and that's what people value, right?"

UK MODELS: Two saloons, two SUVs

OUR PICK: New 5 sounds fun, with 871bhp and 0-62mph in 3.2secs

HOW BIG IN CHINA? "Tiny", says the boss

2024 GLOBAL VOLUME: 44,851

UK REGISTRATIONS 2025: 12,630

RETAILER NETWORK AND WARRANTY: 14 dealers; three-year, 60,000-mile warranty, eight years for electric vehicle batteries

WE SAY: It has a chance

BIG JOB
Lohscheller has to reduce Polestar's expenditure and develop models like the new 5 (below)

"POLESTAR'S HEADACHE IS ITS RELIANCE ON CHINESE MANUFACTURING, WHICH SCUPPERS US IMPORTS"

7 OMODA

One for the kids. Omoda is angled as younger and funkier than its Jaecoo and Chery sisters

THE first of three closely related companies, Omoda has hit the ground running in the UK since its arrival halfway through 2024, outselling brands including Citroen and Lexus this year.

Aimed at a younger audience than sister brands Chery (mainstream) and Jaecoo (more upmarket), Omoda's cars are more crossover-styled than the boxier SUV-like siblings on the same underpinnings from its stablemates.

The first model to land here was the Omoda 5 – like most other Chinese car companies, the brand employs a very clinical numeric strategy for its car naming. Less clinical than the roots of the Omoda name itself, though, which according to the brand, is a combination of the letter 'O', meaning "life and vitality, a symbol of the essential element of life, oxygen", and Moda, derived from modern fashion.

The 5 is either petrol or electric – called the E5 in another imaginative naming move – and aims squarely for the Nissan Qashqai in petrol form, and Renault's Scenic with the battery-electric car. The petrol version is the more popular of the two, grabbing around 70 per cent of Omoda 5 sales, through a dealer network still growing from its current 81 out towards 100 by early next year. All are joint Omoda and Jaecoo sites, with Chery also being added alongside them as the parent brand lands in the UK.

Illustrating how quickly the Chinese brands can react, Omoda has already revamped the 5 in response to criticism of its ride and handling, as well as some infotainment headaches. The front suspension geometry and steering have been updated, alongside a series of small engineering tweaks, and the petrol version has taken on the same infotainment displays, gear selector and wireless charging pad as the EV. All despite the car being well under two years old.

> **"ILLUSTRATING HOW QUICKLY CHINESE BRANDS CAN REACT, OMODA HAS ALREADY REVAMPED THE 5"**

Following on from the 5 is the 9, a predictably larger model that costs from £45,000 and is looking to steal sales from the Volvo XC60 and Toyota RAV4. The new model joined the range this summer and adds a third different powertrain courtesy of a high-power plug-in hybrid set-up that offers a huge 93 miles of electric range, as well as 443bhp for a sub-five-second 0-62mph time.

Next up is the Omoda 7, potentially arriving late this year, which slots in the same hybrid powertrain as the larger 9, but should cost from around the £35,000 mark.

In typically relentless fashion, Omoda won't stop there. Plenty of other numbers are still spare, with the baby Omoda 3 having been revealed in China earlier this year and making a logical case for being next off the chart. The Kia EV3 rival, which is likely to come here in the second half of next year, would represent a new design dawn for the fledgling brand, being more angular than Omoda's cars to date.

UK MODELS: 5 and E5, plus 9 SHS

OUR PICK: Omoda 9 is the brand's best so far

HOW BIG IN CHINA? Omoda doesn't sell in China, but parent Chery is one of the country's top four

2024 GLOBAL EXPORTS: 940,000 (combined with Jaecoo)

2025 UK REGISTRATIONS: 14,223

RETAILER NETWORK AND WARRANTY: 81 dealers; seven-year/100,000-mile warranty

WE SAY: Swoopier styling is not as distinctive as some other brands', but Omoda's early success and quickly expanding model line-up and dealer network put it in a good position

CHINA
OMODA
LD74 BSO
LS74 AOJ

SUPPORT
Stellantis partnership gives buyers peace of mind, says Leapmotor's UK boss, Damian Dally

6 LEAPMOTOR

Big European backing puts this value-led newcomer in a strong position

LEAPMOTOR'S own UK boss, Damian Dally, puts it best when talking about this huge influx of Chinese brands. "There are names which no-one had ever heard of three, six, 12 months ago, but we have this unique backing from Stellantis, which gives consumers the ultimate peace of mind."

In a landscape where new brands are cropping up everywhere and you're not quite sure which ones will still be around by the time you've even paid off the car's finance agreement, Leapmotor is playing heavily on its partnership with Stellantis – the parent company of Citroen, Fiat, Peugeot, Vauxhall and many more – as proof that it's a serious contender.

And that's helpful in a whole series of ways, some of which are really dull – until you need them. Early Chinese entrants to the UK market found things like supplying spare parts really difficult, so cars involved in an accident, for example, were off the road for weeks or more. But tapping into the Stellantis mother ship means there is a ready-made funnel that Dally

UK MODELS: T03 and C10; four more in 2026

OUR PICK: New B10 seems to be the best so far

HOW BIG IN CHINA? Not yet a huge player like BYD, but growing fast in its home market

2024 GLOBAL EXPORTS: Just over 2,000 in its first year, but has increased 10-fold in 2025

2025 UK REGISTRATIONS: 1,353

RETAILER NETWORK/WARRANTY: 53 dealers; four-year/60,000-mile warranty

WE SAY: Leapmotor has a global player behind it, plus increasingly appealing cars. It's got the look of a brand around for the long term

reckons is the envy of western manufacturers, let alone other newcomers.

Much more interesting than spare parts, though, is the product line-up. Leapmotor kicked off with extremities, via the quirky (to be kind) T03 city car and the C10 family SUV. Next year, it will fill the gaps with a pair of hatchbacks and a couple of SUVs sitting between them, the first of which is the B10 (driven on p22), followed by the VW Golf-sized B05 family car revealed at the Munich show in September.

A smaller hatchback and SUV will follow by the end of 2026. They will be called A05 and A10 in other markets, but there's a feeling Audi may not be impressed if the name comes to Europe, given that its own A5 has been around for quite some time already.

Simplicity is Leapmotor's philosophy – there's just the one very well specced trim level for each car, and though the warranty is less than other Chinese brands at four years, the brand reckons that works for the first owner likely to be buying on finance of the same length. Price-wise, it aims to slightly undercut the likes of BYD or more established European brands, while offering that great levels of standard equipment.

Like most Chinese makers, Leapmotor has been focused on purely electric cars so far, but the C10 SUV will get a range-extender (REV) hybrid system early next year, making it Leapmotor's first non-EV. The B10 REV follows by the middle of next year.

The one thing we haven't touched on is the name. On the plus side, it's a lot more European-friendly than many on this countdown, combining two very English words, and the brand likes to say the 'leap' is a metaphorical springboard for taking the plunge on a new brand. But then the models slide back into the Chinese brand comfort blanket of letters and numbers rather than actual names, which are never the warmest of ways to make sure your new name sticks in the memory.

5 JAECOO

Big-selling SUV brand characterised by imposing grille and Range Rover-like styling

JAECOO has made a big impression this year, with its first model, the 7, hitting an incredible fourth place in the new-car sales chart in September, an unprecedented feat for a brand that hadn't even sold one car in the UK a year ago. That's unlikely to all be retail buyers running for their nearest Jaecoo dealer, but no matter whether it's rental, Motability or enticing fleet deals, you'll be starting to spot that distinctive toothy grille on our roads increasingly often.

Jaecoo is one of a trio of closely related brands, alongside Omoda under Chery's ownership. As with Omoda (far left), it was created in April 2023 by Chery, and designed to expand outside its own borders into Europe and other big markets worldwide.

The story behind the company's name is that it blends the German word for 'hunter' – Jager – with the English word 'cool'. Honest.

The 7 kicked off Jaecoo's UK presence at the beginning of 2025, coming in 145bhp 1.6 petrol or 201bhp 1.5-litre plug-in hybrid forms, the latter with a generous 56-mile EV range. That's a better bet than the petrol, which doesn't exactly blow you away with its official 37.7mpg fuel economy figure.

The 7 wasn't alone for long, with the smaller and even more Range Rover Evoque-like 5 landing here this autumn. That takes Jaecoo into electric territory for the first time, and while the E5's range of 248 miles and charging speed of just 80kW don't grab the attention, the pricing will. Kicking off at £27,505 for the EV, or £3k less for the 1.6-litre petrol, it's well loaded with kit for its price. Think well specced Nissan Qashqai for the price of a smaller Juke.

The next new thing looks likely to be the larger Jaecoo 8 SUV, a seven-seater aimed at the likes of Volkswagen's Tayron. Although not yet officially confirmed for the UK, it's already on sale in Australia and South Africa, so looks likely to be with us next year. That car will probably come with a 245bhp petrol engine and sit at the top of Jaecoo's UK line-up.

There's also talk of the boxier electric Jaecoo 6 off-roader, boasting looks that merge a DS No7's detailing with the Land Rover Defender's boxy shape, which is at least a change from the budget-Range Rover looks of the first pair of cars to land here. As well as the styling, a suite of off-road driving modes would mark out the 6 as something different from the rest of the Chinese crowd, but as yet, it's not confirmed for the UK.

European production for UK Jaecoos is rumoured, courtesy of Chery's joint venture with Ebro at the former Nissan plant near Barcelona in Spain. But plans for everything that will be built there are still a mystery, with deadlines pushing backwards from the original 2024 announcement. The plant is already producing rebadged Omoda and Chery cars for the Spanish market under the Ebro brand famous for light trucks and buses.

UK MODELS: 5 and E5, plus the 7 (petrol and PHEV)

OUR PICK: E5 is the most complete package

HOW BIG IN CHINA? Parent Chery is China's fourth-largest manufacturer, but the Jaecoo brand isn't sold in its home market

2024 GLOBAL EXPORTS: 940,000 (combined with Omoda)

2025 UK REGISTRATIONS: 18,170

RETAILER NETWORK/WARRANTY: 81 dealers; seven-year/100,000-mile warranty

WE SAY: Definitely has a foothold in the UK market. Jaecoo offers good value and decent quality in packages that are stylish but lack a little originality

> **"THE COMPANY'S NAME BLENDS THE GERMAN WORD FOR HUNTER WITH THE ENGLISH WORD COOL"**

JAECOO
LP74 HFX

4 CHANGAN

China's oldest car company is a real Europhile – with 15 years in the UK already

ON the east side of Birmingham, five nondescript buildings sit around a little green. This is Chinese car maker Changan's powertrain test centre – and it's been in the UK since 2010.

About 100 engineers here have undertaken powertrain R&D on nine-in-10 Changans on sale globally. Given that the company built 2.6 million units last year, "that's a lot of vehicles," Changan UK managing director Nic Thomas tells us.

Changan is one of those Chinese companies you might never have heard of, even though it was founded in 1984 and claims to be the country's first passenger-car maker. Operations are not just in the UK: there's a design centre in Turin, Italy, with 300 staff and a satellite studio in Munich, Germany, for sister brand Avatr.

"As early as 2001, Changan decided that to be a global automotive player, it needed to be a global company," says Thomas. "We've got facilities in the US and Japan, but Europe has been the focus for a very long time – it's Changan's second home."

More investment – up to 2 billion Euros (£1.74bn) – is set aside for the region. One priority is vehicle assembly here by 2030. Thomas confirms assessments are under way. "We need somewhere with a great supply chain and a great overall cost base," he says, which probably makes eastern Europe the favourite.

Having product development in Europe helps the company work around the clock, enabling so-called 'China speed'. And the UK commercial roll-out will proceed at lightning pace, following the official launch a month ago with the Changan Deepal S07 EV.

That's a big crossover, designed in Turin, and which costs £39,990 for a spacious five-seater that can travel an underwhelming 295 miles on a charge. The domestic suspension set-up was deemed too soft for us, so the UK team recalibrated it, along with the touchscreen menus and driver-assistance systems.

A smaller brother, the S05, is scheduled to join it by the end of this year. Both will run electric and hybrid powertrains; Changan doesn't plan any solely combustion drivetrains. Although the Chinese equivalents run range-extenders, the European powertrains will be plug-in hybrids, co-developed in the Midlands "with a serious EV range and a petrol engine to back you up," says the UK boss.

"There will be a third smaller SUV coming by the end of next year, and then we'll keep adding products. We'll have a suitable range of six to eight vehicles in the near future to cover multiple customer bases. We can offer all sorts of different cars."

Thomas has been with the company for two years. Its UK technical centre is well established, with dealer sales staff, as well as service technicians, going through initial training. Aftersales care – or the lack of it – will break plenty of Chinese wannabes, but Thomas is determined that won't happen to Changan. "We have a team ready to deal with any issues, driving to dealers to fix problems on site, plus over-the-air updates," he says.

The company will use two brands in the UK, Changan Deepal and German premium-chasing Avatr. Deepal is a standalone brand in Australia, but the UK will go to market as Changan Deepal, with the suffix used in the same way VW has ID or Hyundai Ioniq.

"To me, Changan stands for stand-out modern design, high quality and really usable tech – at very affordable pricing. Everybody wants to be premium. Not Changan," adds Thomas.

UK MODELS: Deepal S07

OUR PICK: Let's see what the S05 and hybrids offer

HOW BIG IN CHINA? Changan is top five in China, selling 2.68 million units last year

2024 GLOBAL EXPORTS: 600,000 – and on track to top 1 million this year

2025 UK REGISTRATIONS: 19

RETAILER NETWORK AND WARRANTY: 40 dealers; seven-year/100,000-mile warranty

WE SAY: Changan means business. But the range, charging and efficiency of its EV offerings need to improve – and quickly

"CHANGAN IS ONE OF THOSE COMPANIES YOU MIGHT NEVER HAVE HEARD OF, EVEN THOUGH IT WAS FOUNDED IN 1984"

3 CHERY

Four new SUVs in just six months: Chery has the firepower to eclipse Jaecoo and Omoda

‘FLOODING the zone’ is the Republican political tactic of overwhelming the opposition with relentless new initiatives – and a blueprint for Chery International.

Today, it’s almost certain you won’t have clapped eyes on a new Chery. But the firm plans to launch four new SUVs in six months, and if it makes similar progress to sister brands Jaecoo and Omoda, Chery SUVs will be peppering the UK’s roads this time next year.

What makes us so confident? Chery’s track record, steely-eyed intent and its launch line-up.

Naturally we have to start with the cars, which typically deploy the same blueprint: a touch larger than competitors for the edge on spaciousness, dripping with standard equipment for a hi-tech feel and launching with petrol or hybrid power to satisfy the masses. This is not a pure-electric brand like XPeng or Polestar, even though Chery has electric powertrains on the shelf, ready to deploy.

Chery’s identikit SUVs will peel out like Russian dolls. The smallest will be the Tiggo 4, which is big for the B-segment, like the Peugeot 2008. It’ll run a 1.6-litre turbocharged petrol engine coupled to a six-speed dual-clutch transmission. Expect a hybrid too and prices in the low-£20,000s when sales begin in March.

If you wander down to one of Chery’s 25 retailers, you’ll already discover the Tiggo 7. It’s a 4.5m-long five-seater powered by the same 1.6-litre engine, or Chery’s Super Hybrid System (SHS). Fully charged, the 18.4kWh battery should deliver about 50 miles of EV range, but the kicker is the aggressive price: £29,995 makes it the UK’s cheapest plug-in hybrid.

The line-up is simple, with just two trim levels. The entry Aspire covers pretty much every base; upgrading to Summit seems superfluous when all it adds is two extra speakers to the audio system, ventilated front seats and heated steering wheel.

Completing the range are the Tiggo 8 and 9. The 8 is, in essence, a Tiggo 7 stretched to fit seven seats, and is priced from £28,545. Then the flagship 9 gives off budget-Maybach vibes with its chromed alloys and grille, and Mercedes GLC-style stature. It’ll come in under £40k.

Their exterior designs won’t offend anyone and the cost/spec equation makes a very rational case: Chery is painstakingly targeting family buyers. And it’s already working in markets such as Australia and South Africa; the Tiggo 7 and 8 have racked up more than one million sales outside China. In fact, Chery is China’s largest automotive exporter, outperforming more established names BYD and SAIC, owner of MG.

“Chery started its overseas operation 23 years ago,” said UK boss Gary Lan at Chery’s London launch in August.

“But it took 20 years’ preparation to reach the UK, because this is one of the world’s most sophisticated, mature and important markets. [We’ve waited] to ensure our products, network and service can meet UK customers’ needs.”

That’s a clear statement of intent: Chery is a brand that western car makers should take very seriously indeed.

“THE EXTERIOR DESIGNS WON’T OFFEND ANYONE, AND THE COST/SPEC EQUATION MAKES RATIONAL SENSE”

UK MODELS: Tiggo 7 and Tiggo 8 (petrol and PHEV)

OUR PICK: We’ve only driven the Tiggo 7

HOW BIG IN CHINA? 2.6 million units

2024 EXPORTS: 1.14 million

2025 UK REGISTRATIONS: None yet, but watch this space

RETAILER NETWORK AND WARRANTY: 25 dealers; seven-year/100,000-mile warranty

WE SAY: Omoda and Jaecoo proved the concept. Now their parent brand – with more SUVs and broad appeal – is muscling in

2 BYD: B

China's big rival to Tesla w

"WE want to be one of the largest mainstream brands in the UK," says Bono Ge, BYD's UK country manager. No messing: this Bono wants to be bigger than U2.

Build Your Dreams is the standard bearer for the Chinese car industry's international expansion; it entered the UK market just over two years ago with the Atto 3 electric SUV. Now it has a range of six EVs, and the imminent arrival of the Seal 6 DM-i estate will make it two plug-in hybrids.

BYD isn't quite China's biggest car maker – SAIC, owner of MG, gets that accolade – but last year sales hit 4.27 million vehicles. It certainly gets the most attention, however, often pitched in a death-or-glory battle with Tesla to be the world's omnipotent EV maker. Spoiler alert: it's winning.

The company isn't a pure car maker. It started out as a battery supplier for mobile phones and moved into cars only 20 years ago: other interests include buses (it's a major supplier of London's red icons), rail, solar power and energy storage.

Volkswagen Group has 62,000 employees in R&D and sells 4.8m vehicles under the VW brand. "We have 120,000 engineers," elaborates Bono Ge. "We [apply for] 45 patents every day, we have a lot of technologies." BYD has invested more in R&D than its net profit in 13 of the last 14 years. It won't be easy for western car makers to keep pace.

BYD's innovations include popularising lithium-iron-phosphate (LFP) batteries, the cheaper alternative to lithium-ion NMC by eliminating rare earths such as cobalt. The chemistry is less energy-dense but engineers solved that with its 'Blade battery', which looks like a razor head and crams more strips of cells into the pack. LFP is also less prone to thermal runaway (high-temperature fires) than NMC batteries, should the worst happen.

The firm also pushed ahead with 'cell-to-body' design where the battery pack is a structural part – in effect the car's floor. There's a promotional video where BYD subjects the Seal saloon to a crash test, unbolts the battery and inserts it in another Seal, which simply starts up and drives away.

Like Tesla, BYD brings lots of parts and the drivetrain in-house, striving to make everything more efficiently. That way it can cut cost, helping it make profit on extremely cheap EVs: the Dolphin Surf (or Seagull in China) costs less than £10,000 in its home market; the new Seal 6 plug-in is just £16k.

Prices are much higher in Europe but competitive enough to power BYD's growth in the UK, now the company's largest market outside of China. "All customers really appreciate value for money, for a really well equipped product," says Ge. "We really like the UK market: the people here are open-minded and like [adopting] new technologies."

The Dolphin Surf supermini and Atto 2 small SUV are the two new electric BYDs to hit the UK in 2025. Total registrations have blasted into orbit – up 576 per cent year-on-year to 35,604 cars – although growth hasn't always been so dramatic.

The brand had to overcome an early parts-and-repair scare that hit insurance premiums, and slowing demand for pure electric cars left the initial three-model range marooned in a niche part of the market. BYD doesn't sell any non-electrified cars, limiting its appeal.

Reinforcements arrived with the Seal U DM-i plug-in hybrid last summer and this one model – the UK's best-selling plug-in hybrid – accounts for about half of BYD's UK volume.

"DM-i does really well," says Ge, "and we want [prospects] to understand it better; the Seal U is still a new thing. It's a stepping stone to an electric vehicle for a lot of people concerned about range and so on; why not just try the DM-i technology, right? It's a similar price to an ICE car, but its economy makes it more environmentally friendly and it's quieter, with EV driveability."

The UK retail network has now passed 100 stores, and is expected to hit 130 by the end of 2025. "More products, more market coverage, and we are also growing our network. We also strongly

BONO GE UK country manager, BYD

> **"WHY NOT JUST TRY THE DM-I TECH? IT'S A SIMILAR PRICE TO AN ICE CAR, BUT ITS ECONOMY MAKES IT MORE ENVIRONMENTALLY FRIENDLY, AND IT'S ALSO QUIETER, WITH THE DRIVEABILITY OF AN EV"**

UK MODELS: Dolphin Surf, Dolphin, Atto 2, Atto 3, Seal, Sealion 7 (EVs), plus Seal U and Seal 6 (PHEVs)

OUR PICK: Seal 6 DM-i

HOW BIG IN CHINA? The number two car maker behind SAIC

2024 GLOBAL EXPORTS: 4.27m

2025 UK REGISTRATIONS: 35,604

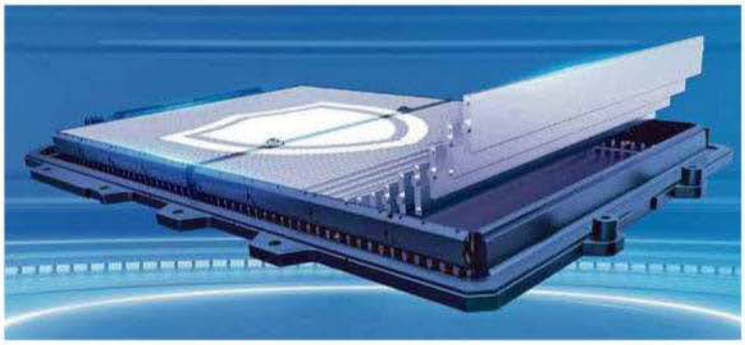
RETAILER NETWORK AND WARRANTY: 102 dealers; six-year/93,750-mile warranty

WE SAY: The cars aren't world-beaters, yet. But the ambition is global domination

INCOMING
Estate version of Seal 6 is due to go on sale in the UK in January next year

BUILDING INNOVATION

wants to conquer the car world. It looks like resistance is futile



BATTERIES BYD has championed lithium-iron-phosphate battery packs, which are cheaper than NMC and less prone to thermal runaway

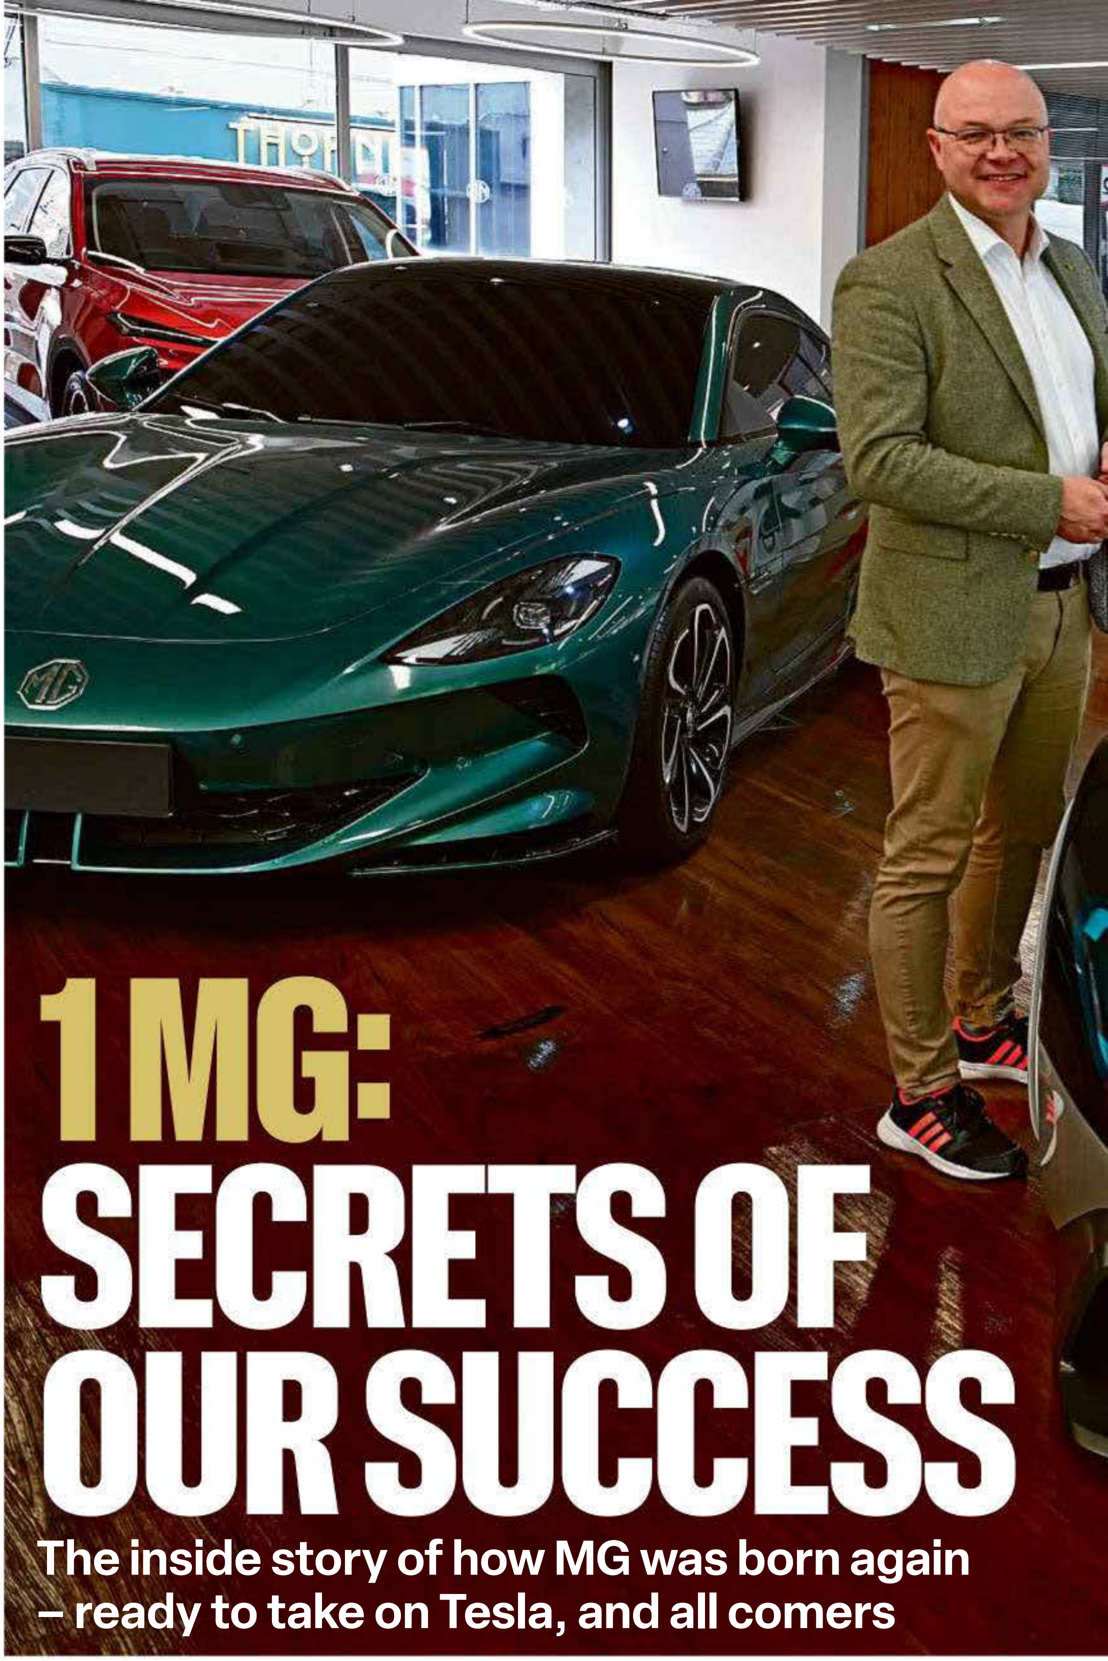
invest in marketing, to bring up brand awareness and generate a lot of [interest] for dealers."

Low-margin fleet deals support the brand's growth across the UK and Europe, reckons autos analyst Matthias Schmidt. "This gains momentum, but going forward that model is unsustainable. In Germany, the volume share going to private customers is often in single digits," he tells us.

Deep-pocketed BYD won't panic: it wants to conquer market share for the long-term. And the next salvo will be opening two European factories. Pilot production at the Hungary plant – which is set to build the Atto 3 SUV and Dolphin hatchback – is imminent. And BYD is reported to be fast-tracking its Turkish facility, too. Combined, the two plants should yield more than 300,000 units of capacity when they're up to full steam – and help BYD circumvent its 27 per cent import tariff.

BYD wants to reshape the western European car market. Its growth suggests it's going to succeed.

> "BYD IS PITCHED IN A DEATH-OR-GLORY BATTLE WITH TESLA TO BE THE WORLD'S OMNIPOTENT EV MAKER. SPOILER ALERT: IT'S WINNING"



1 MG: SECRETS OF OUR SUCCESS

The inside story of how MG was born again – ready to take on Tesla, and all comers

Phil McNamara

Phil.McNamara@autoexpress.co.uk

THE UK's number one Chinese car company is a brand born 101 years ago in the verdant English countryside: MG Motor. No, we haven't lost our minds: Shanghai Automotive Industry Corporation snapped up the badge after MG Rover plunged into administration in 2005, and it now sells more cars in a single year than the firm delivered in its pre-Chinese history. That's progress.

Any new entrants looking for the playbook on how to crack Europe should kick off by reading up on MG: an incessant supply of increasingly competitive cars, in simple ranges with lots of powertrains; affordable prices undercutting the mainstream; a big, nationwide dealer network.

One aspect isn't so easy to replicate, though: a well known badge, loved by many. Head of product planning David Allison has spoken at huge global automotive conventions, but reckons his nerviest speech ever was to about 100 passionate members of the MG Car Club – right here in the UK.

"Those guys are immensely satisfied the brand still exists – so many have disappeared over the years and aren't likely to be resurrected," he says. "MG is more successful now than it's ever been. They might have a garage full of classic MGs, but they've probably got an HS, ZS or MG3 as well."

We're in a meeting room in MG's European headquarters on London's Marylebone Road, a stone's throw from quintessential tourist spots such as Madame Tussauds waxworks and Sherlock Holmes's flat. But how British is MG these days?

"We're very much a global organisation with its heart in the UK," Allison muses. "We manufacture our cars in a different part of the world now, but the brand is over 100 years old, and an awful lot still goes on in the UK: advanced design and engineering. And it's not insignificant that this is still MG's biggest export market."

That gives Allison a lot of clout in the MG machine. After all, he delivers 30 per cent of the HS SUV's global volume. He and his team of five people – the leanest in the industry, Allison reckons, despite selling more than 80,000 cars three years running – decide which MGs to import and their ranges, specs and prices. They're in charge of the promotional offers, volume forecasting and even getting the cars into the country and out to dealers.

How does he decide which MGs come here? "It's a bit like being in a sweet shop," Allison explains. "It's very tempting to pick every single one and cram it all in the little bag, but we have to be respectful of what would be appropriate for this market, because it's the world's most complex."

That means every import has to work in retail, satisfy a broad spectrum of fleet buyers and make financial sense on the massive Motability scheme, which funds leases for disabled motorists. Pick-ups

DAVID ALLISON Product planning head

> “WE MANUFACTURE OUR CARS IN A DIFFERENT PART OF THE WORLD NOW, BUT THE BRAND IS OVER 100 YEARS OLD, AND AN AWFUL LOT STILL GOES ON IN THE UK”

UK MODELS: ZS, HS, S5 SUVs, 3 and 4 hatchbacks, Cyberster, plus IM5 and IM6 EVs

OUR PICK: HS – the best Chinese hybrid on sale

HOW BIG IN CHINA? Number one, with 4.639 million vehicles delivered in 2024

2024 GLOBAL EXPORTS: 1.082 million

2025 UK REGISTRATIONS: 65,394

RETAILER NETWORK/WARRANTY: 155 dealers; seven-year/80,000-mile warranty

WE SAY: With its dealer network and high-quality cars, MG has risen from the flames to spearhead the Chinese invasion of Europe

are out, and although MG has just launched its IM sub-brand with two performance EVs, most of that range is China-orientated and too big for UK roads.

With great discipline, Allison targets the four market segments that deliver 80 per cent of UK volume: ‘B’ supermini and SUV with the MG3 and ZS and S5 EV, plus ‘C’ hatchback and SUV with the electric MG4 and HS. Buyers choose from a mix of petrol, hybrid, plug-in hybrid and pure electric, and although MG is known as an EV brand, its share of registrations has dropped from 39 per cent when the MG4 was flying, to 27 per cent last year.

“We could be selling an awful lot more petrol cars than we do currently,” chimes in Guy Pigounakis, MG’s commercial director and another motor-industry veteran. Like David Allison, he ended up at Hyundai after launching the MG F roadster back in the nineties. “We’ve deliberately held back supply of pure ICE cars, so it doesn't compromise where we want to track in terms of emissions. That’s a good example of how the ZEV mandate is framing [our sales] policy.”

ZEV mandate – the UK’s ambitious ramp-up targets for manufacturer EV sales – comes up frequently in our two-hour conversation. “I don’t think many dealers like electric cars: they get stuck with the part-exchanges, the [unreliable] residual values and demonstrator cars, and they just see it as costing them more and more money,” says Pigounakis. “Some hope the whole net-zero

GUY PIGOUNAKIS MG commercial director

> “WE COULD BE SELLING AN AWFUL LOT MORE PETROL CARS THAN WE DO CURRENTLY. WE’VE DELIBERATELY HELD BACK SUPPLY OF PURE ICE CARS, SO IT DOESN’T COMPROMISE WHERE WE WANT TO TRACK IN TERMS OF EMISSIONS”

strategy will just be abandoned, and they’ll be back to selling combustion cars. I keep making the point they won’t, because manufacturers build cars for a global market.”

And China is the poster child for EVs, which powered half of its 31-million new-car market in 2024. Perhaps the retailers should count their blessings that MG isn’t an EV-only franchise. Ironically it was the MG4, the electric hatchback that was cheaper but better to drive than VW’s ID.3, that took the brand to the next level.

“The MG4 was the first credible, award-winning electric car that actually achieved price parity with internal combustion-engine competitors,” says the sales boss. “The industry always said: as soon as you achieve price parity, adoption should accelerate significantly. Well, EV retail is definitely improving and we should take a bit of credit for that.”

Low-cost manufacturing of EVs is one of the prime advantages China brings. Allison recalls launching Hyundai’s first Ioniq EV almost a decade ago. “It had 28.3kWh, a 130-mile range and we thought it was incredible. Look at the relative cost of that car too.” He chuckles at the comparison with today’s cars.

“Chinese ownership brings stability, allowing us to operate in a way that MG couldn’t in its earlier years. We have a huge domestic market opportunity and access to a huge product portfolio.”

Tapping that unlocks the next UK launch, the S6 (see p15) – another EV and a larger sibling to the S5. Its powertrain offsets the fact the HS isn’t offered in purely zero-emissions guise. That model does have the brand’s only plug-in hybrid, but it’s available with a regular hybrid too, just like the MG3 and ZS. “From nowhere, we are the second biggest [retailer] of hybrid vehicles in the UK, behind Toyota,” says Allison. “But we’re not overly reliant on one type of car or powertrain.

“If you can offer the right product with the right powertrain at the right price, in a market which is very, very dynamic, then that’s the best opportunity to be successful.”

All very good advice for Chinese rivals desperate to eat MG’s lunch. Before our interview, Pigounakis was in a long meeting analysing their performance – so what’s his verdict?

“The speed at which the Chinese brands have established themselves in the UK has been nothing short of astonishing. It completely eclipses previous new entrants: the Japanese, the Koreans. The legacy brands have really suffered. But we will continue growing this year, and that’s in the context of about 100,000 other Chinese cars being registered.”

He sees the new entrants following Hyundai and Kia’s original strategy of putting cars into rental fleets, getting their products seen on the road and creating a rapid turnover of metal to feed retailers’ used-car lots. “It’s an absolutely cast-iron route to market, which gets cars on the road,” says

CARL GOTHAM MG design director

> **“BACK IN 2018, WE THOUGHT THAT WE NEEDED A SPORTS CAR FOR THE 100-YEAR ANNIVERSARY, WE REALLY DID. AND THANKFULLY IT CAME TO FRUITION WITH THE CYBERSTER”**

Staff at MG’s London HQ talk to their counterparts in China via video links to discuss firm’s future plans

NEW CHALLENGERS
MG has introduced the IM5 (left) and IM6 EVs as it moves upmarket to take on Tesla

Pigounakis. “That gives people confidence and makes them think: ‘I’ll take a look as well’.”

The one thing that makes him envious? “[The other Chinese brands] are clearly spending a fortune in marketing. So, you know, hats off. And they are buying a lot of fleet business.” Pigounakis is sanguine: MG has pivoted to more profitable retail sales, he claims, for a 50:50 mix.

Two initiatives show MG’s growing confidence: the Cyberster roadster and the IM brand. The IM5 saloon and IM6 SUV are two high-performance electric cars, bang in the middle of the £40,000-£60,000 market previously beyond MG’s reach. The IM6 packs 742bhp, outgunning the Tesla Model Y, but costs £11k less. DC charging – at around 400kW, thanks to its 800V architecture – is up there with Europe’s best. The IM5 saloon follows the same blueprint to steal sales from Tesla’s Model 3.

“No-one’s really taken on Tesla head-to-head; our two cars sit nicely as competitors for theirs,” says Pigounakis. In the first few weeks, MG has bagged 750 orders including a 100-unit fleet deal; company-car tax breaks make EVs hard to resist.

The Cyberster roadster won’t be top of any company’s choice list, but it’s the defining work of MG’s advanced design studio, perched on the floor above the product and sales teams. Design director Carl Gotham and his 20 interior and exterior designers, who shaped the first HS and the MG4, do “our own trend work, [define] where the landscape is going and where we think MG should be active”, Pigounakis says. Resurrecting a two-seat MG was a mission for Gotham, which the London team advocated for years. “Back in 2018, we thought that we needed a sports car for the 100-year anniversary, we really did. And thankfully it came to fruition,” Gotham tells us.

The electric roadster revived a segment that had been dormant since Tesla’s ceased production in 2012. But if ICE sports cars are niche, replacing a V8 with electric motors must make for a tiny customer base? Allison argues its value is measured way beyond mere sales, saying: “We wouldn’t have done a central feature partnership at Goodwood without Cyberster, nor might we have been in position to do the IM products as well: it gave us the ability to elevate the brand and the price point.”

And the London studio’s coupé concept remains a possibility: “If you were looking at trying to get a little more from the initial investment, the coupé makes an awful lot of sense,” Allison concludes.

MG has gone full circle: the first ‘new’ car under Chinese ownership was a warmed-over TF roadster in 2008. And, following Longbridge’s demise, European production is set to be rebooted, although the exact plan is a closely guarded secret. “We’re going to have to find somewhere to build cars in an environment which is tariff-friendly,” says Pigounakis.

But even a 48 per cent tariff isn’t holding MG back: SAIC’s registrations are up 20 per cent in Europe in 2025, and set to smash the 250,000-unit mark this year. The challenge will be staying ahead of BYD and company. But for now, Allison and Pigounakis can reflect on a job well done: they’ve already achieved what a host of Chinese car makers will spend the next decade trying to emulate.

DETAILS Nissan's design boss tells our man how brand's nineties styling (below) inspired some features. Optional glass roof (left) makes cabin brighter and boosts headroom

GIOVANNY ARROBA Vice President, Nissan Design Europe

"THE LEAF IS ALL ABOUT MUSCULARITY AND AGILITY, BUT IT SHOULD STILL HAVE A SENSE OF URBAN CHIC AND SEXINESS"

nches out with all-new Leaf

orphed into a sleek and slippery rival for the VW ID.3 and Kia EV3

STYLING Leaf's new look has been dictated in part by the desire for good aerodynamics that will give the car a good range

chic and sexiness," he said. "The [styling] of the Leaf is again very much shaped by bringing 604 kilometres [of range] to the customer within that price range."

Nissan has also sprinkled in plenty of nineties-inspired design details, harking back to the brand's heyday. Elements such as three-dimensional rear lights and their clever 'Ni-San' (two-three in Japanese) graphics, plus references to sports models such as the 300ZX around the blacked-out rear panel, all suggest that the company is leaning into something the newer Chinese and Korean brands don't have: heritage.

It might appear like a big car, but pictures don't quite do the Leaf justice, because it's one of very few EVs that look smaller in the metal. At 4,350mm long, it's only around 50mm longer than the boxy Kia EV3. The Leaf is available with 18 or 19-inch wheels, although specific trim details ►

ALL-SEASON TYRE TEST 2025

JOHN BARKER Head of tyre testing

> "NO DESIGN IS BRILLIANT IN THE WET, DRY AND SNOW, SO WE ASSESS THE TYRES' PERFORMANCE IN EACH CONDITION TO SHOW THE BALANCE THEY HAVE STRUCK"

THOROUGH EXAMINATION

Our expert testers evaluated each tyre's performance in snow, dry and wet conditions, with hi-tech help

AUTO EXPRESS TYRE TEST
H CL 873

ALL-SEASON TYRE TEST

Six year-round designs are put through their paces, alongside the winners of our summer and winter

John Barker

WE rarely experience extended periods of snow here in the UK, so it's no surprise that the all-season tyre is increasingly popular both here and in regions of Europe with similar climates.

In some European countries it's compulsory to fit winter tyres, which are designed for the cold (7 deg C and lower), from late Autumn to Spring, changing to summer tyres for the warmer months. It's not the case in the UK and very few drivers bother, which is why traffic often slithers to a halt in ice and snow.

The all-season tyre solves that problem. Just like winter tyres, all-season designs carry the same 3 Peak Mountain Snow Flake symbol on their sidewalls, showing they are capable in the snow. However, their construction, tread design and compound are developed to perform better than a winter tyre in warm conditions, so they can be used all year round, hence the name.

Of course, all-season tyres are a compromise. No single design can be brilliant in the wet, dry and snow, so we measured their performance in all conditions to reveal the balance each has struck. We also tested our winning winter and summer tyres at the same time to show their relative performance. And as usual, we have included a budget all-season tyre to see what you get for your money.

"ALL-SEASON TYRES ARE DESIGNED TO PERFORM BETTER THAN A WINTER TYRE IN WARM CONDITIONS, SO THEY CAN BE USED ALL YEAR ROUND"

IDEAL COMPROMISE
We were looking for the all-season tyre that gave the compromise of wet, dry and snow performance that best suits UK conditions.

WHAT WE TESTED

WE returned to the popular 225/45 R17 size for this test and our contenders included the reigning champion, the Pirelli Cinturato All Season SF 3, plus the joint runners-up from 2024, the Bridgestone Turanza All Season 6 and Continental AllSeason Contact 2. Completing the line-up were the Vredestein Quatrac and Dunlop All Season 2, and the budget tyre was the Sailun Atrezzo 4Seasons.

As is our policy, all tyres were sourced from the open market to ensure that what we tested was what you can buy. Manufacturers nominated their tyres, three choosing a V speed rating (149mph) and two W (168mph), while our budget tyre was Y rated (183mph). All picked a weight rating of 94 and all but one nominated XL (extra load) spec.

EU label ratings are given (right) for fuel economy (RR – rolling resistance) and wet grip (WG), which range from A to E, with A being best. We also list pass-by noise (N), which is measured in decibels, so the lower the number the better.

HOW WE TESTED THEM

To find a winner, we assessed the tyres in several ways, at various facilities

SNOW TESTS

SNOW tests were carried out at Goodyear's 'Arctic Center' facility in Saariselkä, in the north of Finland. Here, the conditions were just cold enough to deliver consistency for our snow laps, with track temperatures ranging from -7 to -4 deg C.

Handling was assessed on a short but tricky 0.8km (0.5 mile) track that included a significant drop and rise, a couple of quick transitions that tested handling balance and lateral grip, and a number of tight corners that tested braking and traction. Separately, we assessed braking from 30-3mph and acceleration from 5-20mph, taking the average from a number of runs over two days.

WET TESTS

AS usual, the wet and dry tests were carried out at Continental's Contidrom near Hannover in Germany. Its northerly location delivered the low temperatures we sought, with early starts yielding 4 deg C.

We measured the stopping distance of each tyre from 50mph to zero, their cornering ability on a 57.5m-diameter circle, and their resistance to aquaplaning in deeper water when driving in both a straight line and on a curve.

The challenging 1.8km (1.1-mile) wet handling circuit revealed each tyre's cornering grip, traction, handling balance and breakaway characteristics.

DRY TESTS

DRY braking distances were measured from 62mph to zero and we measured lap times on a one-mile section of the serpentine dry handling circuit, which showed each tyre's grip, handling balance and transient composure. In-cabin noise was measured on three surfaces and the average calculated.

FUEL ECONOMY

WE measured rolling resistance – the energy required to turn a loaded tyre – to industry standards. A four to five per cent change in rolling resistance is equivalent to a one per cent change in fuel consumption.

PRICES

PRICES were sourced from online retailer Blackcircles and are for a fitted tyre at the time of writing. For tyres not retailed by Blackcircles, an average of the price at other retailers was used. However, price plays only a small part in the overall result.

CALCULATING A WINNER

THE results for each test category are converted into percentages, with the top tyre rated at 100 per cent and the rest scored relative to this.

In terms of the overall score, reflecting the conditions we face in the UK, 50 per cent is accounted for by the wet performance, 35 per cent by the dry and 10 per cent by snow, with the emphasis on handling and braking in the wet and snow disciplines. The final five per cent is shared between the other tests.

> **“ALL TYRES WERE SOURCED FROM THE OPEN MARKET TO ENSURE THAT WHAT WE TEST IS WHAT YOU CAN BUY”**

6th Sailun Atrezzo 4Seasons

★★½☆☆

THE budget all-season Sailun wears the 3PMSF symbol, which shows it has passed tests proving its ability in snow conditions. Despite that, it was last in all three of those tests, taking 5m longer to get up to speed than the best in the traction test and then taking over 4.5m longer to stop. It lacked traction and lateral grip around the snow circuit, but had a useful adjustability.

It was a similar story in the wet. The Sailun took almost 5m more to stop from 50mph than the best and 3m more than even the fifth-placed tyre. It also finished last around the handling circuit but, as on the snow, it wasn’t that far off the pace, feeling decent at low speeds but worryingly skittish at higher speeds. It fared better in the deeper water, finishing fourth in straight aquaplaning and equal second in the curved test.

It was last again in dry braking, taking 5.6m longer to stop than the best and yet it topped the table in dry handling, although first to sixth places were covered by less than one second. The Sailun was quietest, too, but recorded the highest rolling resistance, making it the least economical tyre here.

WE SAY: “Poor braking performance in snow, wet and dry means this budget tyre is no bargain.”

Overall 95.2%

Price £98

Snow braking	86.2	6th
Snow traction	82.1	6th
Snow handling	95.6	6th
Straight aquaplaning	94.1	5th
Curved aquaplaning	95.7	=2nd
Wet braking	85.5	6th
Wet handling	97.3	6th
Wet circle	97.6	=4th
Dry braking	86.8	6th
Dry handling	100	1st
Cabin noise	100	1st
Rolling resistance	75.6	6th

Blackcircles says: “We are unable to provide any insight into the tyre’s popularity or performance with customers at present.”

5th Dunlop All Season 2

★★★⯪☆

A SMATTERING of podium positions and lowest rolling resistance were the high spots for the Dunlop. It put in a decent performance in the snow, finishing fifth in the brake test, less than half a metre off the best. It scored a strong second in traction and lapped the demanding snow handling circuit fourth fastest, where it proved generally stable.

The Dunlop also delivered a solid but not outstanding performance in the wet tests. Its aquaplaning performance was good in both straight and curved tests, it was a useful second on the wet circle, and equal fourth in the crucial brake test, two metres off the best. Around the demanding wet handling circuit it was fourth, a second and a half off the best, proving itself effective, although it wasn't the easiest to read and exploit.

It was well off the pace in the dry braking test, ranking fifth and taking a full 5.5m more to stop than the top tyre. It was third in the handling test, although, as in the wet, it wasn't the most decisive, lacking consistency. It was refined though, netting third in cabin noise, and it was first in rolling resistance, making it the most economical tyre here.

WE SAY: "Most economical and a decent tyre in most disciplines, it just fails to shine in this company."

Overall 97.6%

Price £130

Snow braking	98.6	5th
Snow traction	96.9	2nd
Snow handling	99.3	4th
Straight aquaplaning	94.4	4th
Curved aquaplaning	89.5	5th

Dry braking	87.0	5th
Dry handling	99.7	3rd
Cabin noise	99.1	3rd
Rolling resistance	100	1st

Blackcircles says: "Well received by customers for its performance in all conditions, but especially in wet, snow, frost and ice."

4th Vredestein Quatrac

★★★⯪☆

WHEN we last tested the Quatrac, it was overly biased towards snow performance. It was still strong in the snow this time, but delivered a slightly more even set of attributes to take fourth overall – just. It finished a strong third in all the snow tests; it was only 0.3sec behind the best on lap time and was grippy and confident in the low-speed sections, but a bit too keen to slide in the quicker parts.

It was joint fourth in the key wet braking test, taking two metres longer to stop from 50mph than the best, and this time it delivered around the wet handling circuit, too, scoring its highest placing, second. As in the snow, it was impressive at lower speeds, getting into and out of the tighter corners very effectively but then felt a little loose in the high-speed sweeps. Third and fourth in the straight and curved aquaplaning tests rounded off a solid wet performance.

It was mid-pack in dry braking and sixth and last in dry handling, with a scrubby feel and less agile responses than the best, so it needed to be bullied a little to find the best lines. It was average for rolling resistance and at the higher end for measured cabin noise.

WE SAY: "A tyre that prioritises snow performance but is good in the wet and fair in dry conditions."

Overall 97.7%

Price £104

Snow braking	98.9	=3rd
Snow traction	96.8	3rd
Snow handling	99.4	3rd

Cabin noise	98.6	=4th
Rolling resistance	89.7	4th

Blackcircles says: "Customers rate this tyre 4.5/5 overall. Noted for its good performance in wet and dry conditions, as well as a quiet drive and strong grip."

3rd Bridgestone Turanza All Season 6

★★★★½

SECOND overall in our last test, the Bridgestone just missed out this time by the smallest of margins. Once again it proved strong in the wet and the dry, and delivered a little more in the snow this time.

The improvement that lifted its snow performance came in braking, where it finished second, within half a metre of the top tyre. It was ranked fifth in the traction test and also around the handling circuit, where it was a couple of seconds off the pace.

We put a premium on wet performance, and the Bridgestone performs well here. It set the standard in the all-important braking test, and was first on the wet circle and in straight aquaplaning. It was fifth around the wet handling circuit, 1.6sec off the best, but it was easy to exploit, being stable and predictable. It just needed a moment to settle into the turns where others were more decisive.

It wasn't the quietest or most economical, but second in dry braking means it offers strong braking on all three surfaces. It was within half a second of the best tyre around the dry handling track, where it felt superb being responsive, grippy and precise.

WE SAY: "Outstanding in the wet, great in the dry and useful in the snow. A great all-season tyre."

AUTO EXPRESS ALL-SEASON TYRE TEST 2025 RECOMMENDED

Overall 98.9%

Price £123

Snow braking	99.0	2nd
Snow traction	94.8	5th
Snow handling	96.6	5th
Straight aquaplaning	100	1st

Wet circle	100	1st
Dry braking	96.6	2nd
Dry handling	99.4	5th
Cabin noise	98.2	6th
Rolling resistance	83.6	5th

Blackcircles says: "Well regarded for its performance in various conditions. Rated 4.6/5 overall, the tyres' great performance inspires confidence in drivers."

2nd Continental AllseasonContact 2

★★★★½

STRONG results on all three surfaces illustrate what an accomplished all-season tyre the Continental is. Best in snow braking and a strong fourth in traction are complemented by a close second around the handling circuit, where its nose-led balance compromised its slow-speed ability a little but made it reassuringly stable and confidence-inspiring in the many tricky faster sections where others would be sliding from the rear.

It was a similar story in the wet, although this time its performance on the handling circuit was complete. It set the quickest time, blending low-speed agility and bite with steadfast stability and composure in both fast and slow corners. It was also third around the wet circle and in wet braking, less than half a metre behind the top tyre. If it has a weakness, it's aquaplane performance; it was sixth and last in both deep-water disciplines.

The Continental was effective rather than inspiring in dry handling, delivering its grip both a little reluctantly and noisily, although it was refined over various surfaces. It was third in dry braking and delivered the second-lowest rolling resistance.

WE SAY: "A superb all-season tyre that's great to drive and delivers in all conditions."

AUTO EXPRESS ALL-SEASON TYRE TEST 2025 RECOMMENDED

Blackcircles says: "Rated at 4.6/5 by over 1,200 customers. Many report satisfaction with performance in wet and dry conditions, and good durability."

AUTO EXPRESS TYRE TEST

> **“THE PIRELLI DIDN’T PUT A WHEEL WRONG, FINDING THE IDEAL LINES TO DELIVER A SATISFYING, SOLID PERFORMANCE”**

1st Pirelli Cinturato All Season SF 3

★★★★★

LAST year’s winner dominated our all-season test once again. Top in four tests, second in four more and with an equal third and a fourth its lowest rankings, the Pirelli All Seasons set an unassailable standard.

That equal third place was in snow braking, but it was within half a metre of the best and went on to set the pace in the traction test and around the handling circuit, where it seemed to have more of everything – but particularly traction and lateral grip. It was composed and really inspired confidence, which contributed to a remarkable consistency: all three timed laps were within a tenth of a second.

The Pirelli was just as impressive on the wet handling circuit, finishing third, and a mere 0.6sec behind the pace-setting Continental. It felt great there too, with terrific turn-in and mid-corner grip. It didn’t put a wheel wrong around the lap, finding the ideal lines and hitting all the clipping points to deliver a satisfying, solid performance. This was bolstered by a second-place spot in wet braking, fourth on the wet circle (but not far off the pace) and a pair of strong aquaplaning results – first in the curved test and second in the straight.

It notched up another first place in dry braking; it stopped from 62mph in 36.9m, 1.3m better than the next best tyre and almost 3m better than the third. It was second on the handling circuit, where it felt right at home: grippy, responsive, finely adjustable and quiet. It was quiet according to the noise meter, too, ranking second quietest on our three surfaces. All this and third-best rolling resistance.

Objectively, it was a very strong performance on all three surfaces, and it delivered top-drawer feel and feedback around the laps. Outstanding.

WE SAY: “The definitive all-season tyre, and perfectly matched to UK conditions.”

OTHER CHOICES

All-season tyres are not the only choice, of course, which is why we compared them against the UK-favourite summer rubber and the much less frequently used winter tyres

AS part of this all-season tyre test we included a winter tyre and a summer tyre, tested alongside our all-season contenders to illustrate their relative strengths and weaknesses.

In some European countries, drivers are compelled by law to switch to winter tyres in the cold months, from around October to the end of March. Here in the UK, we can keep on using regular tyres – what our mainland European cousins call summer tyres – all year round. These are very poor in snow, which is why the lightest flurry can bring traffic to a standstill.

Winter Continental WinterContact TS870

WINTER tyres are designed specifically for the coldest months of the year, for temperatures below 7C and for roads covered in snow, slush or ice. They are usually replaced by summer tyres for the warmest months, so their capabilities are tailored to cold conditions. It was no surprise that in our snow test the winter tyre performed better than our all-season tyres. That said, the best all-season tyres get close.

In cold, wet conditions, the winter tyre was competitive in most disciplines and especially the aquaplaning tests; their wide grooves are designed to capture snow and are also good at clearing water from the contact patch. However, the winter tyre fell short of the best all-season tyre in the crucial wet braking test, and the margin was even greater in dry braking. In warmer temperatures, these gaps would be much bigger because the winter tyre's compound would be far outside its operating range, while an all-season tyre is designed for a much broader range of temperatures.

Blackcircles says: "Rated 4.7/5 for 'would buy again'. Buyers say the tyres give predictability in cold, wet or snow."

Cabin noise	99.1
Rolling resistance	91.9

Summer Vredestein Ultrac+

WE included a summer tyre to show the folly of using them on snow. We do this for every winter and all-season tyre test, yet when the moment comes to set a lap time on the summer tyre, it's always a shock just how bad it is. It was hard to move off from a standstill, difficult to turn and worst of all was the fear that we wouldn't be able to stop the car.

The main reason a summer tyre is unsuitable for winter driving is because its compound is designed to work above 7C – below this it becomes less flexible, but it also has the wrong tread design for cold conditions. The grooves in winter and all-season tyres are designed to hold snow because this then grips the snow on the ground, whereas the tread of a summer tyre is designed to clear standing water and generate lateral grip on warm asphalt.

However, in the cold wet and dry tests, the summer tyre performed well. It's when temperatures get close to freezing point and beyond that it struggles and winter and all-season tyres come into their own.

Blackcircles says: "Buyers rate this tyre 4.8/5 for 'would buy again' and highlight its good value for money."

RESULTS BY CATEGORY

How the tyres stacked up against each other

THE Sailun demonstrated that, in broad terms, you get what you pay for. It was no bargain, however, and for your money you get last place in all the snow tests, last in wet and dry braking, and the poorest economy. First in dry handling and cabin noise was little compensation.

The fifth-placed Dunlop was most economical but pipped to fourth spot by the Vredestein, which was at its best on snow but good in the wet and reasonable in the dry tests.

The top three tyres were in a class of their own. Almost tied for second place were the Bridgestone and Continental. The former proved outstanding in the wet, while the latter delivered in all conditions. But topping the table once again was the Pirelli, a tyre that offered superb performance across the board and drove brilliantly.

THE Pirelli was barely ever out of the top three, performing brilliantly in all conditions, notably the key wet and dry braking tests, and feeling great too. It's the definitive all-season tyre, and a great choice for conditions in the UK.

WINTER ESSEN

Halloween is around the corner, and daylight is shrinking fast. So, these are the best products

Tom Barnard

BY now, you will have pulled your winter clothes to the front of the wardrobe and switched on the heating at home. The cold weather is here and with it come longer hours of darkness. But it's not just hard on us – your car will be feeling the chill too.

Lower temperatures mean it has to work harder to get going, with less power in the battery and thickened oils in the engine. Once it's running, there are windows to clear, heaters to run, and lights that need to be kept bright. On top of that, the roads are wet and covered in salt, which chips away at paint and accelerates corrosion.

Now is the time to get ready for the worst of winter, with accessories and treatments that will keep you and your car safe through the chilly weather. These are the top cold-busting products we tested this year.

> **"YOUR CAR WILL ALSO BE FEELING THE CHILL. THERE ARE WINDOWS TO CLEAR, HEATERS TO RUN AND LIGHTS TO BE KEPT BRIGHT"**

BOSCH
AEROTWIN

WIPER BLADES

BEST BUY

Bosch Aerotwin

Price: £20-£25
wiperblades.co.uk

THERE'S no getting away from it – your wipers work harder in winter, with those thin strips of rubber expected to keep your view crystal clear. Inevitably, we will also expect them to survive being dragged across frost and even push snow out of the way.

Our tests include leaving wiper blades overnight in a freezer at -18 degrees C and checking to see if they remain supple enough to clear the screen. Bosch's Aerotwins have been the consistent winners.

PHILIPS
RacingVision
GT200

Up to 200% more brightness

HEADLAMP BULBS

BEST BUY

Philips RacingVision GT200

Price: £22.49
powerbulbs.com

WINTER means most of us will be driving to work and back in darkness, making it crucial to have good headlights. Many cars now come as standard with LED lamps, which produce more powerful beams and a cooler, blue-tinged light, which is better at picking out reflective surfaces.

Upgrading older halogen lamps to LEDs is expensive and also illegal on the road, but you can make a real difference to your visibility at night by simply swapping the bulbs for brighter ones. Our tests showed a 270 per cent improvement is possible compared with standard bulbs – a massive difference for an investment of less than £25.

SCREEN WASH

WHILE a watery mixture of screen wash might have been fine in the summer, it will soon result in frozen jets when temperatures fall. The first you might know about it is when your wipers smear salty grime across the windscreen while you are being dazzled by a low sun.

Now is the time to start topping up the wash reservoir with winter-strength fluid so it's running through the pipes in time for the freezing weather. Our tests gave Prestone Extreme Performance Screen Wash the top score for its cleaning, value, and frost-busting ability.

RUST PREVENTION

WHILE the top of your car might look pristine, the underneath could be a different story. It's bombarded with dirt and debris, including salt. Most owners don't clean the bits they can't see, so rust can quickly take hold.

If you want to give your car the best chance of a long life, apply a coating to exposed metal parts such as sill ends, floorpans and suspension. Be careful not to get any on the brakes, though.

Bilt-Hamber's Dynax-UB is the wax that has best held off corrosion in our tests.

RECOMMENDED

JUMP START PACK

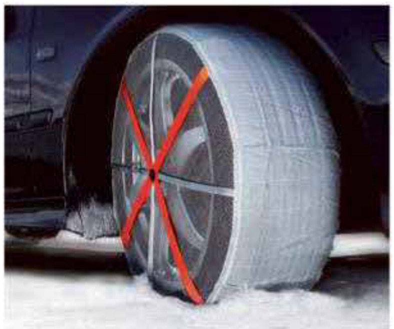
BEST BUY

MSC Overland 10Ah

Price: £89.95
mobilesolarchargers.co.uk

COLD weather means your car's battery will have less power, and you'll be asking more from it. Even if your battery is new, sheltering in your parked car with the radio on could be enough to drain it.

A booster pack is far more convenient than calling for a recovery service or begging a passing motorist for a jump start. Our Best Buy is the MSC Overland 10Ah.



SNOW SOCKS

RECOMMENDED

AutoSock

Price: From £49.95
autosock.co.uk

WHILE winter or all-season tyres offer the best chance of your car making it home after a snowstorm (see all-season tyre test on p85), there will be many drivers who don't want the trouble and expense of changing their wheels.

If that sounds like you, then one answer could be snow socks. These are a more modern alternative to snow chains and wrap around the wheel and tyre, with the fabric gripping the snowy surface. They will get you out of a slippery situation.

ICE SCRAPER

BEST BUY

Simply 3-in-1 Super Squeegee & Ice Scraper

Price: £1.79
halfords.com

YOU'RE running late for work and reach your car to find a layer of frost covering the glass. If you don't have a scraper or some de-icer, you'll be left waiting for the heater to warm up, or using a loyalty card to clear the glass.

Scrapers start in price from just £1, so it makes sense to pick one up and leave it in your glovebox or door pocket. We reckon the Simply 3-in-1 Super Squeegee and Ice Scraper has everything you need and only costs £1.79.

CAR COVERS

IF you need to leave your car laid up for longer than a few days over winter or want to protect it from leaves, rain and frost, then you might consider fitting a cover. Those that enclose the entire car will provide complete protection, but you need to be careful to avoid condensation build-up and damage to the paint.

Far easier to use are half covers that protect the top of the car, keeping UV rays away from the interior and stopping damage to convertible roofs.

BUYING CARS

WHY TECH CANNOT DRIVE FOR YOU

SHANE WILKINSON

Auto Express's senior content editor on why too many drivers forget their responsibility to drive safely, and rely too much on technology to do so instead

AUTOMATIC headlights and wipers, humongous touchscreens, countless sensors, autonomous emergency braking – the list of technology in modern cars is longer than ever before. All of these features often come in seriously handy, too, taking a sizeable chunk of effort out of everyday driving.

However, if you're shopping for a new car that's adorned with all of this lovely gadgetry, I urge you to do one thing: remember that it's there to assist you as a driver, not replace you.

All too often I'll be driving along the motorway with numerous cars creeping far too closely towards the centre white line, or there are countless people driving without their lights on at night, or in rain and fog.

Sure, people have been making driving mistakes since the dawn of the motor car, but I can't help feeling that some of us are becoming too reliant on automation.

Mainstream fully autonomous driving is a while away yet, so it's vital that we all remember who's responsible for the safety of every car on the road: the driver. I'm certainly not saying that we should stop using advanced assistance and safety systems (in fact I often make use of them myself) but, as with any other kind of technology, I'm saying that it's essential that we respect it and operate it properly – especially when you consider that it's your own safety – and that of other road users – that's potentially at risk.

"MANY NEW CARS WILL TELL YOU OFF FOR BAD HABITS, BUT IT SHOULDN'T BE DOWN TO A MACHINE TO REMIND YOU TO DRIVE SAFELY"

It shouldn't take long to learn and understand your car's advanced safety and assistance systems, whether that's through hands-on experience, by reading your owner's manual, or making sure you pay attention to a proper handover from the dealer when you buy a new car that will likely have cleverer tech than the one you're coming out of. Being clued up on these systems means you'll then be in a better place to understand each one's limitations. It's a pretty small amount of effort, but this extra homework could prove crucial in keeping you safe from any accidents or falling foul of the law.

Once you're familiar with your car's fancy technology, it's then important to resist the temptation of getting too comfortable and falling into bad habits. While many new cars will now tell you off for looking away from the road in front or taking your hands of the wheel, it shouldn't be down to a machine to remind you to drive safely.

DRIVER POWER

OWNER VIEWS ON THE UK

THE DRIVING EXPERIENCE

YOU SAID "The performance of my plug-in hybrid is outstanding and so is refinement. The steering is light and responsive, and the ride is superb. Throw in really enjoyable handling and the Kuga is a brilliant SUV."

MPG AND RUNNING COSTS

YOU SAID "I get 46 miles of electric range from my plug-in hybrid, which slashes my fuel costs. I've averaged 115mpg, which is impressive."

> "Although nothing major has gone wrong, it's a car that could have been built better. Some materials feel rather cheap."

INFOTAINMENT AND ELECTRICS

YOU SAID "The hi-fi system has a great sound quality and it's really intuitive. The navigation is also easy to use with clear mapping, but what I really like about my Kuga is the heated windscreen, which should be on every car for safety reasons."

PRACTICALITY AND SPACE

YOU SAID "Ford has put a lot of effort into ensuring there are plenty of cubbyholes dotted all around the cabin. The back seats are incredibly easy to fold down and the sliding rear seat makes it even more practical."

> "It's a spacious SUV with high seating. Thanks to great fuel economy and the latest technology, I have no regrets about buying it."

POSITION 4th

Ford Kuga Mk3

Richard Dredge

THE Ford Kuga just missed out on a podium position this year, in fourth place. It's a major improvement on last year's performance, when it managed 37th. This is the latest, third-generation Kuga, built in Valencia, Spain, which has a range of eco-focused powertrains starting with a 1.5-litre three-cylinder petrol, and including 2.5-litre petrol/electric hybrid and plug-in hybrid options.

Inside, the SUV inherits much of its design from the Focus on which it's based, but the Kuga significantly outperforms its hatchback stablemate in terms of owner satisfaction; drivers enthuse about their SUVs in a way the once-supreme Focus can only dream of (it came a poor 47th in this year's survey). The Kuga's family-friendly credentials are reflected in its highest-scoring categories; it manages a second place for boot capacity, third for seating versatility and fifth for both all-round visibility and rear-seat legroom. A seventh spot for front-seat comfort is also welcome.

The Kuga is in the bottom half of the table for only three things: ride quality (29th), servicing costs (28th) and value for money (26th). Apart from a 23rd place for drivetrain smoothness, everything else is in the top 20, which is no mean feat.

Perhaps one of the most impressive scores is fifth for handling, but other scores worth writing home about include second for braking responsiveness, seventh for reliability as well as overall quality, while the number of safety features is rated in fourth.

OVERALL SCORE **88.69%**

Bars illustrate 50-1 rankings per category. The longer the bar the better the car's ranking

INTERIOR AND COMFORT

YOU SAID "The visibility is good, but the windscreen pillars could be a bit slimmer. With the rear parking camera and decent door mirrors it's pretty good. The seats are very comfy too, while there's lots of legroom for those in the rear."

YOUR VIEW

Reader comments reflecting how they feel about their car

> "The high spots for me are the handling, power and comfort, but customer service is poor. Staff seem to be out of their depth."

> "It's a really comfortable car and spacious. Very generously equipped and with a stereo that sounds awesome, it's great."

> "The collision-avoidance system activates so randomly that it's useless, and the lane-keep assist is an easily missed light."

WHY DRIVER POWER IS IMPORTANT

Every year thousands of owners share thoughts, opinion and experiences of the cars they own. This not only helps potential buyers, it also helps makers shape the new generation of cars. Make sure your voice is heard.

USED BUYER'S GUI

FROM £1,000 The VW Lupo was the company's first attempt at a city car, a

Richard Dredge

UNTIL the arrival of the Lupo in 1999, Volkswagen had never offered a city car. The original Beetle arguably sat in the bigger supermini segment, although in period it would have been seen as a small family car. Either way, when the Lupo arrived it, broke new ground for Volkswagen.

With its high-quality cabin, excellent road manners and smart design, the Lupo was definitely a premium option when new, and for years used values reflected its position in the marketplace.

But now the Lupo is a modern classic and while these smart-looking tiddlers are less readily available than they used to be, they're worth seeking out because they offer so much in return for so little. The Lupo is proof indeed that sometimes the best things do come in small packages.

HISTORY

THE Lupo was launched in February 1999 with a choice of 50bhp 1.0 or 1.4-litre petrol engines plus a 60bhp 1.7 SDi naturally aspirated diesel. The 1.4-litre engine put out 75bhp in the Lupo E and S, but 100bhp in the Sport, which was added to the range just three months later.

From July 2000 there was a 75bhp 1.4 TDi turbodiesel option. By the end of 2000 the Lupo that everyone now wants was on sale: the 125bhp 1.6-litre Lupo GTi, which initially came with a five-speed manual gearbox; from May 2001 a six-speeder was standard fare.

From May 2003 all Lupo engines were Euro 4 compliant and from April 2004 all models came with anti-lock brakes.

WHICH SHOULD I BUY?

THE obvious answer is the GTi, because these are the most fun and the most collectible; just six per cent of Lupos sold were GTi editions; the 1.0E was the biggest seller. But you pay a big premium for a GTi, and if you want cheap transport you're better off going for a 1.4-litre car; the SDi is a bit gutless but the TDi is much perkier. All diesels are frugal though.

No Lupo is lavishly equipped, with the entry-level E especially basic. Standard kit ran to a four-speaker radio/cassette along with front airbags for the driver and passenger, and that was it.

The Lupo S added central locking, electric windows and height adjustment for both front seats. Sport trim brought anti-lock brakes, electrically adjustable door mirrors, heated windscreen washer jets and 14-inch alloy wheels.

The GTi was also fitted with an alarm, xenon headlights, an eight-speaker hi-fi, sport seats and 15-inch wheels. While the E and S came with a full-size steel spare wheel, the Sport had a space saver and the GTi a tyre-repair kit.

PRICES

THERE aren't loads of Lupos for sale, and most of the ones that are available are being sold privately, because their low values mean there isn't enough margin in them for traders to sell them. Values are generally set according to mileage, spec and condition, rather than age, although newer Lupos tend to fetch more than early cars.

You can pay as little as £1,000 for a scruffy, high-mileage Lupo that's usable but will need some work before too long. Spend £2,500 and you can buy a 70,000-mile 1.0 E, while an extra £500 secures a 1.4-litre car. You'll be doing well to bag a Lupo GTi for less than £4,000, and for this money it'll be high-mileage and/or a bit tatty. A nice Lupo GTi fetches £6,000-£7,000, while superb low-mileage examples can be worth up to £10,000 or so, with six-speed cars carrying a premium.

✓CHECKLIST

UNSAFE MODS

The Lupo has been really popular with young drivers for a long time, and many of them have modified their cars. Make sure any changes to the suspension, exhaust, lights, ECU, etc have been done well.

BODYWORK

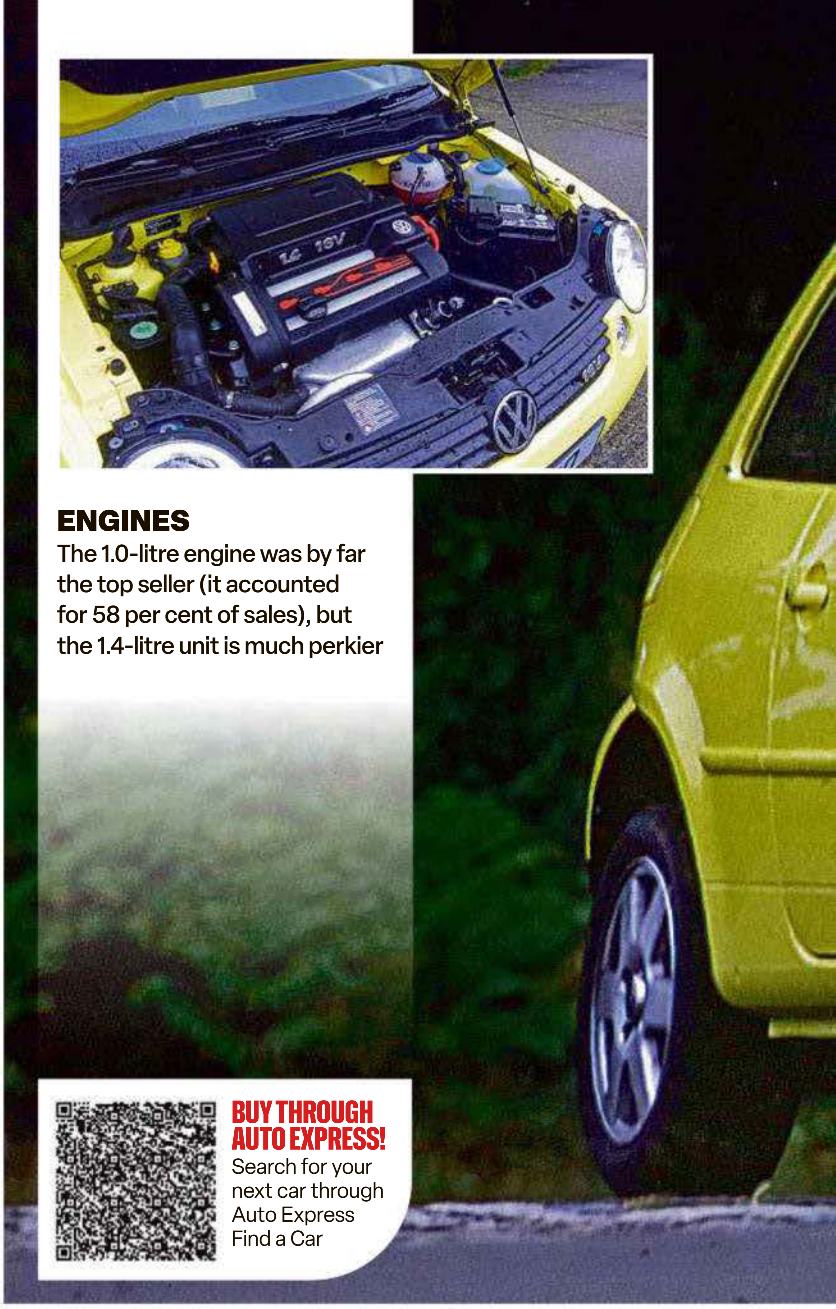
The roof gutters can rust, and so can the sills and rear wheelarches. The GTi's spoiler can absorb water, leading to paint problems, while the door-check strap can fail and the doors drop from weak hinges.

ELECTRICS

An array of electrical maladies is common, including failed xenon headlights on the GTi, rear wiper failure and the central locking not functioning. The windows stop working when the switches fail.

OTHER ISSUES

Early pedal boxes were weak and their welds could fail; later cars had a redesigned set-up. Gearboxes are weak as the bearings wear; the transmission can fail with no warning.



ENGINES

The 1.0-litre engine was by far the top seller (it accounted for 58 per cent of sales), but the 1.4-litre unit is much perkier

BUY THROUGH AUTO EXPRESS!
Search for your next car through Auto Express Find a Car

ONLINE VALUATION TOOL
Head over to our valuation tool to find out what your car is worth.

ON THE ROAD
All Lupos weigh very little, which means they corner neatly, even though the suspension is soft

DE Volkswagen Lupo

nd it was a cracker. Take time to find a good one and it'll both entertain and serve you well

STYLING
Lupo seems like a shrunken version of the VW Polo from the same era, and it still looks funky today

RUNNING COSTS

UNLESS you buy a liability that needs lots of new parts, the running costs of any Lupo should be very low.

While the GTi sits in a surprisingly high insurance group 22, all other models are in groups 5-12; most are in group 7. For Lupos registered before 1 March 2001, all cost £220 per year to tax, apart from the SDi and GTi, which are £360. For cars registered later, annual VED varies vary between £195 (1.0) and £345 (GTi), although the diesels are £35. The fuel economy varies from 38-64mpg depending on the engine.

Maintenance should also be cheap. The interval is set at every 12 months or 10,000 miles, while all engines need a fresh cambelt every four years or 40,000 miles. Any decent garage can maintain a Lupo, typically for £200-£300 per year, with cambelt replacement around £400.

RECALLS

VW has issued only two recalls for the Lupo, most recently 20 years ago, so any example that's still in use should have had any necessary repairs made by now.

The first recall was issued in July 2002, and it affected more than 120,000 Lupos and Polos made between May 1997 and December 1999. On the production line these were fitted with sub-standard vacuum pipes for the brake servo. The pipes could fail leading to a loss of servo assistance, although there was no chance of brake failure; new pipes were the solution.

The second recall came in March 2005, because almost 50,000 diesel-engined VWs (including some Lupos) made between March and August 2004 left the factory with faulty fuel pumps that could leak.

RUNNING COSTS
Any Lupo that's in decent nick should cost very little to keep on the road

INTERIOR
Many Lupos have two-tone trim with brightly coloured inserts to lift your mood. The build quality is superb for such a small car

ON THE ROAD

MOST Lupos weigh less than a tonne; even the 1.4 TDI is just 1,057kg, and that shows in the driving experience. The Lupo feels agile and fun with well weighted steering (power assistance was standard range-wide from January 2000), but the suspension is tuned for comfort rather than sharp handling; the ride is impressive for such a short and lightweight car.

Entry-level Lupos with the 1.0-litre engine feel underpowered, so we'd aim for at least a 1.4-litre powerplant. The 1.0-litre cars also did without a front anti-roll bar, so they don't corner as sharply as more powerful editions.

ALTERNATIVES

THE SEAT Arosa is the same car with different badges. The Arosa is even more unusual now than the Lupo and there was no GTi option, but prices for these tiny SEATs are temptingly low, with running costs just as palatable.

The Lupo was up against the Ford Ka, and these make a great cheap buy in first and second-generation forms, although the former can rot particularly badly.

The Citroen Saxo and Peugeot 106 are essentially the same car and are both cheap runabouts; you could also consider the Citroen C1 and C2 along with the Peugeot 107. The Toyota Yaris is another high-quality alternative that's much more roomy in the back.

PRACTICALITY

There isn't much space in the boot or the back seats. All models came with two back seats as standard, but three belts and head restraints were optional

INTERIOR

BIJOU and simple sum up the Lupo's cabin. The dashboard is basic but clearly laid out and the build quality is great, but air-conditioning was optional. Front-seat comfort is good but the back seats are cramped and two seatbelts is the norm; Isofix mountings were standard from June 1999. Boot space is 140 litres, or 830 litres with the seats down.

DRIVER POWER

ALTHOUGH the Ford Ka and Toyota Yaris appeared in our Driver Power surveys, the Lupo didn't, because not enough owners took part to give a representative sample.

Not that it makes much difference anyway, because anyone looking to buy a Lupo nowadays will be fully aware of its limitations, such as a lack of tech and cabin space, as well as its key strengths. Those include being cheap to buy and run, along with fun to drive.

VERDICT ★★★★☆

WITH the newest Lupos now two decades old, really nice examples are becoming ever-harder to find. But we can assure you that it's worth searching for one if you fancy something that's easy to park, costs buttons to run and is easy to maintain.

Of course these cars have the minimum of tech; even when compared with the latest city cars, the Lupo is very basic. For many, that's a good thing, because there's less to go wrong, there's no interference with the driving and it keeps the cost of maintenance down. Perhaps unsurprisingly, practicality isn't a strong suit, but as a cheap runabout that will probably be a second car, the Lupo makes a great buy.

NEW CAR PRICES

HOW OUR GUIDE WORKS

PERFORMANCE: This is the manufacturer's claimed acceleration time for a car, and is measured from 0-60mph or 0-62mph (0-100km/h), in seconds.

ECONOMY/EMISSIONS/RANGE: Combined WLTP economy in miles per gallon, emissions in grams per kilometre of CO2 and maximum claimed range for EVs. Figures are achieved in the latest WLTP tests, but will vary according to equipment and are unlikely to be representative of everyday efficiency.

INSURANCE: Group rating as quoted by the Association of British Insurers.

WARRANTY: Next to each manufacturer's name is the basic warranty period in months and miles for the mechanical parts. EVs and hybrids will have dedicated battery cover.

LIST PRICE: This is the on-the-road figure and includes VAT, delivery to dealer, the first 12 months' of emissions-based road tax, number plates and first registration.

WILL IT FIT? Is your garage big enough? Our measurements show the length and width of each model, but remember estate and performance variants may be bigger.

DRIVER POWER POSITION: Auto Express's survey canvasses results from tens of thousands of motorists. Models are rated by drivers, then ranked against others on sale in the UK. The lower the number, the higher the score a model achieved.

ROAD TAX: When a car is first registered, its first year's road tax is included in the price. This is emissions-based, with cars falling into one of 13 bands as follows:

0g/km: £10 **1-50g/km:** £110 **51-75g/km:** £130 **76-90g/km:** £270 **91-100g/km:** £350 **101-110g/km:** £390 **111-130g/km:** £440 **131-150g/km:** £540 **151-170g/km:** £1,360 **171-190g/km:** £2,190 **191-225g/km:** £3,300 **226-255g/km:** £4,680 **255g/km and above:** £5,490

After 12 months, it's the owner's responsibility to tax their vehicle. All cars are now levied at the same rate whether they're electric, hybrid, petrol or diesel. The standard rate is £195, while cars costing more than £40,000 face an additional charge that increases the annual rate to £620. After five years, these models revert to the lower rates.

EURO NCAP RATING: At the start of each model is its Euro NCAP crash test safety rating (if available). The maximum score is five stars, although the test has been made tougher over the years, so ratings aren't comparable between vehicles and expire after six years.

PICK-UP TRUCKS: The models listed here pay a flat rate of road tax, at £355 per year.

> **"FOR TOO LONG, WAGES HAVEN'T KEPT PACE WITH NEW-CAR INFLATION. AND THAT'S WHY SO MANY ARE FORCED TO ABANDON THE IDEA OF BUYING AND OWNING A CAR"**

MY advice to anyone thinking of purchasing a brand-new car in an uncertain, inflation-ravaged Britain in the final months of 2025? Don't. No need.

Currently, buyers typically have to make an upfront payment of between £40,000 and £50,000 for the right to buy and own an average factory-fresh model. That's my idea of a big, instant, financially painful hit for a private motorist paying his or her own bills. And think closer to £60,000, if high-interest loans are taken out via banks and other financial institutions.

If you don't have or can't borrow this sort of money to spend in one hit, you're not alone. You are the many, not the few. Fact is, for too many years, wages haven't kept pace with new-car inflation. And that's why so many consumers are now forced to abandon the idea of buying and owning. Instead, they're leasing and becoming short, medium or long-term rental customers.

Go for it, I say. But you must, must, must shop around and spend within your means. Study the small print very carefully. Choose your preferred length of lease and likely annual mileage (for example 24 months/5,000 miles). Be flexible and open-minded about makes, models and colours. Look beyond the headline-grabbing monthly payment figure. And never forget this: the figure that matters most is the one spelling out the total cost of your chosen lease period – from day one to day 730 (if you opt for a two-year deal).

If you want a mid-sized, non-premium SUV, you might well make an initial payment (including a broker fee) of about £5,000, followed by 23 payments of, say, £400 a month. The total cost, in round figures, is £14,200 – or about £19.50 daily. Not bad, but not great.

Me, I'm a bit of a tightwad. So I'd only be prepared to pay about half as much. Furthermore, I'd want a larger than mid-sized car for my money.

And without having to look too far (the car-leasing deals section of the Auto Express website), I found that vehicle: a Vauxhall Grandland 1.2 Hybrid 145 e-DCT6 GS with a surprisingly high spec, metallic paint and officially capable of 50mpg-plus, which is impressive for a boxy, spacious barge of a load-lugger that's almost 4.7 metres long.

Admittedly, it's not the greatest or most exciting big SUV. But thanks to its modest initial payment of £2,547 (including fee) followed by 23 monthly payments of £192, the total cost for the entire two-year lease is just £6,970. That's equivalent to around £9.50 a day – for the exclusive use of a big, new, credible, well kitted-out workhorse SUV.

Motorists who insist on buying outright – and have the financial means to do so – face a recommended retail price of almost £37,000 (plus likely interest charges) for this petrol-electric Vauxhall. But those willing to lease it for two years can do so for less than a tenner a day.

I rest my case.

NEW TAVASCAN
100% ELECTRIC
CUP 12A
CUPRA

For the daring few. The new CUPRA Tavascan is here to redefine performance with its bold, unconventional design and state-of-the-art technology. Our first all-electric SUV coupé, crafted for those who defy the ordinary.

Maximum range on a full charge for a CUPRA Tavascan is 298.3 - 342.9 miles (official test WLTP figures) depending on the trim. Official fuel consumption for the Tavascan mpg (litres/100km) combined: N/A. Combined CO_2 emissions: 0g/km. Test data obtained under standardised conditions after the battery had been fully charged (to 100%). The Tavascan is a battery electric vehicle requiring mains electricity for charging. Figures shown are for comparability purposes and may vary by trim. Only compare fuel consumption, CO_2 and electric range figures with other vehicles tested to the same technical procedures. These figures may not reflect real life driving results, which will depend upon a number of factors including the starting charge of the battery, accessories fitted (post-registration), variations in weather, driving styles, route conditions, speed, vehicle and battery age and vehicle load. Zero emissions while driving. Data correct at September 2025.
